The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

Canada's extensive forests have been an invaluable asset to the country and its people since the earliest days of settlement. The productive portion of these forests has poured increasing wealth into the stream of national income, contributing to the economy of the country as the producer of raw materials for industry and as the source of livelihood for hundreds of thousands of persons. Perhaps in no other country is the national wealth so dependent upon its forest resources and the success of its forest industries as in Canada. The annual forest harvest of some 3,424,000,000 cu. ft. supports a highly complex and diversified export and domestic industry directly employing more than 300,000 persons and paying out \$1,200,000,000 annually in salaries and wages. The forests support 8,000 sawmills and 4,000 wood-using plants, many of them small units contributing appreciably to the income of local economies. The pulp and paper industry alone stands first among Canadian manufactures in terms of employment, wages paid, new investment and net value of output, and the sale of forest products abroad represents about 27 p.c. of the value of Canada's export trade.

The predominant part played by the pulp and paper, lumber and other forest products industries in the development of the country and in its current economy has resulted in a widespread tendency to evaluate the forest in terms of timber alone. But equally important is the fact that the existence of widespread forest cover, productive or unproductive in the sense of human utilization, remains essential to the maintenance of the balance of nature—in protecting water-catchment areas and assuring supplies of water, in lowering the temperature, reducing the velocity of the wind and protecting the land against drought and erosion, and in providing shelter for birds and animals. It is reassuring that a growing realization of the economic importance of the forest for its non-commercial values, including recreation and wildlife and watershed protection, is bringing about increasing recognition of the true value of the forest and is thus developing a broader concept of forestry.

* Sections of this Chapter that deal with forest resources and depletion and the federal forestry program were revised by the Department of Forestry and Rural Development, Ottawa. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, were revised in the Forestry Section, Industry Division, Dominion Bureau of Statistics.

Section 1.—Forest Resources

Forest Regions.*—The forests of Canada cover a vast area in the north temperate climatic zone but wide variations in physiographic soil and climatic conditions cause marked differences in their character in different parts of the country; hence, eight fairly well-defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

<i>Region</i>	<i>Percentage of Forest Area</i>	<i>Region</i>	<i>Percentage of Forest Area</i>
Boreal.....	82.1	Acadian.....	2.0
Great Lakes—St. Lawrence.....	6.5	Columbia.....	0.8
Subalpine.....	3.7	Deciduous.....	0.4
Montane.....	2.3		
Coast.....	2.2	TOTAL.....	100.0

Boreal Forest Region.—This Region comprises the greater part of the forest area of Canada, forming a continuous belt from Newfoundland and the Labrador coast westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic species; other prominent conifers are tamarack which ranges throughout, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the forests are primarily coniferous, there is a general admixture of broadleaved trees such as the white birches and poplars; these are important in the central and south-central portions, particularly in the zone of transition to the prairie. In turn, the proportion of spruce and tamarack rises northward and, with increasingly rigorous climatic conditions, the close forest gives way to the open lichen-woodland which finally merges into tundra. In the east there is, along the southern border of the Region, a considerable intermixture of species from the Great Lakes—St. Lawrence Forest such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Great Lakes—St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River Valley lies a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar and largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplars and white birch, are intermixed and, in certain humid portions of the east, red spruce is abundant.

Subalpine Forest Region.—This is a coniferous forest found on the mountain uplands in Western Canada. It extends northward to the major divide separating the drainage of the Skeena, Nass and Peace Rivers on the south and to that of the Stikine and Liard Rivers on the north. The presence of the black and the white spruces plus aspen and birch indicates a close relationship with the Boreal Region, and the characteristic species—Engelmann spruce, alpine fir and lodgepole pine—have boreal counterparts. There is some entry of blue Douglas fir from the Montane Forest and of western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine, limber pine and, on the coastal mountains, yellow cedar and mountain hemlock.

Montane Forest Region.—The Region occupies a large part of the interior upland of British Columbia as well as a part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States and comes in contact with the Coast Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern

* A more detailed discussion of forest regions is given in Bulletin 123, *Forest Regions of Canada*, published by the Department of Forestry and Rural Development.

portions. Blue Douglas fir is found throughout but more particularly in the central and southern parts; lodgepole pine and aspen are generally present, the latter being particularly well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region together with white birch are important constituents in the northern parts. The white spruce, although primarily boreal in affinity, is also present here. Extensive prairie communities of bunch-grasses and forbs are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock, with abundant Sitka spruce in the north and with the addition of Douglas fir in the south. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common toward the timber-line. Western white pine is found in the southern parts and western yew is scattered throughout. Broadleaved trees, such as black cottonwood, red alder and broadleaf maple, have a limited distribution. Arbutus and Garry oak, species whose centres of population lie southward in the United States, occur in Canada only on the southeast coast of Vancouver Island and the adjacent islands and mainland.

Acadian Forest Region.—Over the greater part of the Maritime Provinces, exclusive of Newfoundland, there is a forest closely related to the Great Lakes-St. Lawrence Region and, to a lesser extent, to the Boreal Region. Red spruce is a characteristic though not exclusive species and associated with it are balsam fir, yellow birch and sugar maple, with some red pine, white pine and hemlock. Beech was once an important forest constituent but the beech bark disease has drastically reduced its abundance in Nova Scotia, Prince Edward Island and southern New Brunswick. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar, although present in New Brunswick, is extremely rare elsewhere and jack pine is apparently absent from the upper St. John Valley and the western half of Nova Scotia.

Columbia Forest Region.—A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species in this interior "wet belt". Associated trees are the blue Douglas fir which is of general distribution and, in the southern parts, western white pine, western larch, grand fir and western yew. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the Region. At lower elevations in the west and in parts of the Kootenay Valley the forest grades into the Montane Region and, in a few places, into prairie grasslands.

Deciduous Forest Region.—A small portion of the deciduous forest, widespread in the eastern United States, occurs in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, with the broadleaved trees common to the Great Lakes-St. Lawrence Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. In addition, black walnut, sycamore and swamp white oak are confined largely to this Region. Conifers are few and there is only a scattered distribution of white pine, tamarack, red juniper and hemlock.

Forest Land.—The forest area of Canada is estimated at 1,710,788 sq. miles, about 57 p.c. of which is "productive" in the sense that it is capable of producing merchantable timber; the remainder is incapable of producing merchantable timber because of adverse climatic, soil or moisture conditions or is reserve forest land for which no inventories are available. Table 1 shows the areas of productive and non-productive forest land in each province and territory; forest land in each province classified by type of growth is given in Chapter X at p. 466.

1.—Productive and Non-productive Forest Land, by Province

Province or Territory	Productive Forest Land	Non-productive Forest Land	Total

With help from the Federal Government, inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the federal Department of Forestry and Rural Development compiles the national forest inventory (see p. 471). The latest estimates of the total stand of merchantable timber, by province and region, appear in Table 2. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

¹ Ten inches D.B.H. or over (suitable for saw timber).² Four to nine inches (units of 85 cu. ft.).

Tenure of Forest Land.—Corporations and private individuals own 9 p.c. of the productive forest land of Canada and 91 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 23 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and federal lands such as Indian reserves, military reserves, etc.

Woodlots on the 480,903 farms (1966) across the country comprise about 3 p.c. of the total productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern part of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

3.—Tenure of Occupied Productive Forest Land, by Province

(Net area in sq. miles)

¹ Includes 16 sq. miles of "other" provincial Crown land. ² Of this total, 320 sq. miles are under lease or licence—263 sq. miles in Alberta, the 25 sq. miles in the Yukon Territory and the 2 sq. miles in the Northwest Territories.

Canada's Forest Trees.*—There are more than 150 tree species in Canada, of which 31 are conifers or 'softwoods'. About two thirds of these softwoods and one tenth of the large number of the deciduous or 'hardwood' species are of commercial value.

The spruces are the most important forest trees in Canada. Although red spruce is found only in Eastern Canada, and Sitka and Engelmann only in the far west, black spruce and white spruce are found from the Atlantic almost to the Pacific, and northward to Alaska. About one third of Canada's timber volume is spruce. The wood is used for pulpwood, lumber and plywood.

Second only to the spruces are the two-needled pines—jack pine, which grows from Nova Scotia to northern Alberta and the Northwest Territories, and lodgepole pine in western Alberta, British Columbia and Yukon Territory. These pines comprise 11 p.c. of Canada's standing timber volume.

Third in importance are the true firs, of which the most widely distributed is the balsam fir, found from the Atlantic seaboard west to north-central Alberta. In the far

* Prepared by John W. Ker, Professor of Forestry, University of New Brunswick; reproduced courtesy Timber-jack Machines Limited. The dominant species existing in each forest region are given on pp. 538-539 and detailed information is contained in Department of Forestry and Rural Development Bulletin No. 61, *Native Trees of Canada*.

west are three species: grand fir, which grows on the southern coast of British Columbia and in the southern interior; amabilis fir, found at intermediate levels on the coast; and alpine fir, which grows in the mountains and interior of British Columbia, the foothills of Alberta and southern Yukon Territory. The wood is commonly cut as pulpwood and, to a lesser extent, as sawlogs.

Next in abundance is a family of eight broadleaved deciduous trees: the trembling aspen, largetooth aspen, balsam poplar and five cottonwoods—the eastern, black, lanceleaf, narrowleaf and plains cottonwood. The most widely distributed is the trembling aspen, followed by the balsam poplar. The black cottonwood reaches the largest size in this family. In demand for veneer stock, this species and its hybrids will yield large wood volumes per acre on short rotations under intensive management. The other species in this group are used in the manufacture of excelsior and soda pulp.

Fifth among Canada's forest trees is the hemlock. Three species are native to Canada: eastern hemlock grows in the Maritimes, southern Quebec and Ontario; western hemlock at lower and intermediate levels throughout the coastal and interior wet belts of British Columbia; and mountain hemlock at higher elevations in the southern mountains of British Columbia, growing down to sea level on wet, exposed sites on the northern coast and the panhandle of Alaska. Western hemlock is a valuable pulpwood species. Eastern hemlock is a main commercial source of tannin and the wood is used for railway ties, wood-stave pipe, lumber and pulp. Mountain hemlock is not important as a timber species.

The tree responsible more than any other for British Columbia's world-wide reputation for timber is the coastal form of the Douglas fir, which is dominant in the forests of the south coast and the southeastern half of Vancouver Island. An interior form, the blue Douglas fir, is widely distributed throughout the Rocky Mountain system. Douglas fir is used extensively for lumber, plywood, construction timbers, piling and kraft pulp.

Next in order are the cedars, including arborvitae and yellow cedar. The eastern white cedar is found from western Nova Scotia to Manitoba; its wood is light and resistant to decay. The western red is of prime importance to British Columbia. In virgin forests, it attains heights of 150 to 200 feet and diameters of 8 to 10 feet. It is used for lumber, hand-split shakes, shingles, poles and posts. At higher altitudes on the British Columbia coast, the red cedar is replaced by the yellow cedar. The wood of this species also resists decay and is prized for boat-building and interior finishing. It is useful for poles, piling and as battery separators.

Finally, there are the birches. Most abundant is the white birch which grows widely throughout Canada. Western white birch is a large tree, reaching heights of 100 feet and diameters of three to four feet. It is found in northern and western Alberta, in British Columbia and also on the Atlantic Coast in the east. However, the most important hardwood tree in Eastern Canada is the yellow birch, which grows in southern Newfoundland, the Maritimes, Quebec and Ontario. Its wood is much in demand for flooring, furniture, veneer and railroad ties.

Canada is indeed fortunate to possess such a diversity of useful tree species. The white pine and spruce in the east, and Douglas fir, western red cedar and western hemlock in British Columbia have won for Canada its enviable position as the world's leading nation in forest products trade.

Section 2.—Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 4.

The latest information available on the rate and causes of depletion of reserves of merchantable timber is given in Table 4. These data are not directly comparable with those given in previous Year Books. For instance, earlier DBS figures for British

Columbia differed from those issued by the British Columbia Forest Service because the latter used different conversion factors and different classifications for wood cut in the forests. The DBS is now using British Columbia Forest Service production figures so that the former confusion often encountered by users has been eliminated. Detailed information is given in DBS publication *Logging, 1963* (Cat. No. 25-201).

Table 4 shows only the depletion of the forests caused by utilization and by fire. Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available. Losses from insects and diseases alone are estimated to be in excess of 1,000,000 M cu. ft. of merchantable timber annually.

The productive forests of Canada covering an area of 959,849 sq. miles constitute the reserve from which forest production will be obtained in the immediate future. The supply of merchantable timber on this area is estimated at 748,982,000 M cu. ft. and the average annual utilization in 1955-64 of 3,326,494 M cu. ft. therefore represented less than one half of one percent of the supply. However, it should be noted that utilization does not occur evenly throughout the productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus, overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain their important position in the Canadian economy. Also, efficient utilization of cut timber is an important factor related to forest depletion.

4.—Forest Utilization and Depletion by Fire, Ten-Year Average 1955-64

Forest Fire Statistics.—Forest fires in Canada during 1966 numbered 7,468 compared with 7,238 during 1965 and an annual average of 6,620 for the ten-year period 1956-65. The area burned totalled 1,144,439 acres, about double the acreage burned in 1965 but only about one half of the annual average for the 1956-65 decade. However, about 84 p.c. of the area burned in 1966 was in the Yukon and Northwest Territories where there was an exceptionally dry summer season. The provinces experienced their easiest fire season on record with only 210,450 acres destroyed.

As shown in Table 7, human carelessness was again the principal cause of forest fires in 1966. Some 5,782 forest fires or 77 p.c. of all fires reported were attributed to man, and careless recreationists and settlers accounted for almost half of this total. Although lightning ignited only 23 p.c. of the forest fires, this cause accounted for about 60 p.c. of the total area damaged or destroyed.

Section 3.—Statistics of Forest and Allied Industries

This Section is concerned with the many industries engaged in the felling of timber and its transformation into a great variety of products required in modern living. The extensive forests of Canada provide raw materials for several large and growing primary industries, i.e., the sawmills and planing mills, the shingle mills, the veneer and plywood mills, the particle board plants and the pulp and paper mills, which in their turn provide raw materials for a wide range of secondary industries that convert the products of the primary industries into more highly manufactured goods such as sash, doors, mill work, wooden boxes, furniture, converted papers and paper goods, etc. However, much of the output of the primary forest industries is exported; the sawmill industry and the pulp and paper industry, especially, contribute substantially to the value of the export trade of Canada and thereby provide an important part of the foreign exchange necessary to pay for the imports from other countries.

Statistics of manufacturing activity and total activity of the wood industries and the paper and allied industries may be found in a number of tables in Chapter XVI on Manufactures. These statistics and those included in the tables of this Section are based on the revised standard industrial classification and the new establishment concept, explained in Chapter XVI.

Subsection 1.—Woods Operations

The forests of Canada provide the raw materials for its sawmills and planing mills, shingle mills, veneer and plywood mills, particle board plants and pulp and paper mills as well as roundwood for export in unmanufactured state and other products such as fuelwood, poles and piling, fence posts, mining timber, Christmas trees, etc. Tables 8 and 9 give the estimated quantities of wood cut in Canada by province and by type of product.

¹ In estimating the annual cut, certain factors have been used to convert commercial units to cubic feet. The factor for logs and bolts for the British Columbia coastal region is 175 cu. ft. per M ft. b.m. logscale and for the remainder of Canada 200; the factor for rough pulpwood and round mining timber is 85, for fuelwood and wood for charcoal 80, fence posts 1.2 and fence rails 1.

Subsection 2.—Wood Industries

The standard industrial classification subdivides the wood industries group into the following industries: sawmills and planing mills, shingle mills, veneer and plywood mills, sash, door and other millwork plants, hardwood flooring mills, wooden box factories, the coffin and casket industry and miscellaneous wood industries. The latter item is further subdivided into the wood preservation industry, the wood handles and turning industry, the woodenware industry, the cooperage industry and miscellaneous wood industries, *n.e.s.*

The sawmills and planing mills, the shingle mills, the veneer and plywood mills and the particle board plants (the latter are included in the miscellaneous wood industries, *n.e.s.* group) mainly use roundwood as a raw material and sometimes are called primary wood industries and are dealt with separately below. The other industries, which constitute the secondary wood industries, further manufacture part of the production of the primary wood industries into a great variety of products. However, most of the production of the primary wood industries is not further processed.

Sawmill and Planing Mill Industry.—Lumber is by far the most important single product of this industry and, as shown in Table 10, British Columbia is the most important province in this field. It should also be noted that the shipment figures of Tables 10 and 11 contain a certain element of duplication because sales of lumber from one sawmill to another will be reported as shipments by both establishments. Similar situations occur in most industries to a greater or lesser extent.

In addition to the lumber produced by the sawmill and planing mill industry, a small amount is produced by establishments classified to other industries, bringing total lumber production in Canada in 1965 to 10,815,355 M ft.b.m.

10.—Lumber Production and Shipments and Value of All Shipments of the Sawmill and Planing Mill Industry, by Province, 1965

			Totals.....	10,510,111	749,242

Shingle Mill Industry.—Most of the shingles and shakes produced in Canada are from British Columbia mills. All establishments classified to this industry reported, for the year 1965, shipments of 1,951,817 squares of shingles and shakes valued at \$25,242,000, of which British Columbia accounted for 1,932,077 squares valued at \$25,088,000. However, it should be mentioned that considerable quantities are produced by establishments classified to other industries and by individuals intermittently operating one or two shingle machines or producing by hand; although no adequate measure of this production is available, it is known to contribute significantly to the total. Of the total production in 1965, 2,527,122 squares were exported, 2,489,244 squares going to the United States.

Veneer and Plywood Industry.—The production of hardwood veneer and plywood in Canada is confined largely to the eastern provinces and the production of softwood veneer and plywood almost entirely to British Columbia. For the latter, Douglas fir is most commonly utilized because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. Of the hardwoods, yellow birch is by far the most important species. Although most of the raw materials for this industry are of Canadian origin, some decorative woods are imported, particularly walnut.

About 42 p.c. of the shipments of veneer, shown in Table 12, are softwood veneers; most of these are further manufactured into plywood by Canadian mills, thus contributing to the shipments of plywood shown in the same table. Some of the hardwood veneers are

also shipped to other veneer and plywood mills for further manufacture or to other industries such as the furniture industry for veneering purposes, but a significant portion is exported. Total exports in 1965 amounted to 897,417 M sq. ft. valued at \$30,715,000, of which 840,917 M sq. ft. valued at \$27,043,000 went to the United States.

Most of the plywood is consumed in Canada, although exports are not unimportant in 1965 these amounted to 47,339 M sq. ft. of hardwood plywood valued at \$7,656,000 and 447,964 M sq. ft. of softwood plywood valued at \$29,854,000. The greater part of the exports of hardwood plywood went to the United States (45,094 M sq. ft. valued at \$7,038,000) but most of the softwood plywood exports went to Britain (370,793 M sq. ft. valued at \$24,692,000).

Subsection 3.—Paper and Allied Industries

The standard industrial classification subdivides the paper and allied industries group into the following industries: the pulp and paper industry, the asphalt roofing manufacturers, the paper box and bag manufacturers, and other paper converters. Statistics of manufacturing activity and total activity of the paper and allied industries group are given in Chapter XVI on Manufactures.

Pulp and Paper Industry.—This industry is by far the most important of the group. In fact, it has been for many years the leading industry in Canada, contributing almost 4 p.c. of the total gross national product and over 16 p.c. (1965) of the total value of the country's exports. There were 132 pulp and paper mills in operation in 1965.

These mills consume enormous quantities of roundwood, 16,487,083 rough cords with a cost value of \$415,351,000 being so used in 1965. In that year, 105,767 cords of pulpwood were imported and 1,352,164 cords were exported. In addition, the pulp and paper mill use wood residues of the sawmill and other industries for pulping, such as cores of peeled logs, slabs and edgings or wood chips made thereof, shavings, etc., and recently even sawdust has been used successfully for this purpose. The total of such wood residues used by the industry in 1965 amounted to the equivalent of 4,302,013 rough cords of pulpwood valued at \$92,582,000. The industry also consumes large amounts of electric power, chemicals and other goods and services and requires great quantities of clean water.

Some of the production of the pulp and paper industry is consumed in Canada and serves as a raw material for the paper-using or secondary paper and allied industries and certain other industries, but a great part of it is exported, particularly newsprint and various

types of pulp (see Table 15), most of it to the United States. Some plants included in the pulp and paper industry classification also convert basic paper and paperboard into more highly manufactured papers, paper goods and boards but their output represents only a small part of Canada's total production of converted papers and boards. Tables 13 and 14 give shipment and production figures for pulp and shipment figures for basic paper and paperboards for 1961-65, Table 15 shows exports of pulp and of newsprint to Britain, United States and all countries for 1961-66, and Tables 16 and 17 give world pulp and newsprint statistics for 1964 and 1965.

Asphalt Roofing Manufacturers.—These establishments produce composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and, in some cases, coated with a mineral surfacing. They also produce asphalt, vinyl-asbestos and pure vinyl floor tiles. Their total shipments in 1965 were valued at \$57,760,000.

Paper Box and Bag Industries.—These industries include manufacturers of folding cartons and set-up boxes, manufacturers of corrugated boxes and manufacturers of paper bags. Their total shipments in 1965 amounted, respectively, to \$143,877,000, \$193,052,000 and \$120,918,000.

Other Paper Converters.—This group produces a host of paper products such as envelopes, waxed paper, clay coated and enameled paper and board, aluminum foil laminated with paper or board, paper cups and food trays, facial tissues, sanitary napkins, paper towelling and napkins, toilet tissue, etc. The total value of manufacturing shipments of this industry in 1965 amounted to \$261,964,000.

Section 4.—Forest Administration, Research and Conservation

Subsection 1.—Federal Forestry Program

Administration.—The Federal Government is responsible through several departments and agencies for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, Indian reserves, military areas and forest experiment stations.

The main forestry functions of the Department of Forestry and Rural Development* (established as the Department of Forestry in 1960 and re-named in 1966) include: (1) provision for the conduct of research relating to the protection, management and utilization of the forest resources of Canada and the better utilization of forest products; (2) undertaking, promoting or recommending measures for the encouragement of public co-operation in the protection and wise use of the forest resources of Canada; (3) co-operating with provincial governments and others by means of agreements relating to forestry matters; (4) provision of forest surveys and advice relating to the protection and management of federally administered forest lands; and (5) assuming responsibility for forest protection and management on federal lands at the request of the department or agency concerned. The Act provides for the establishment of research facilities and of forest experimental areas on federal lands.

The Department maintains an Advisory Group to the Deputy Minister, whose main responsibilities are to develop policies and long-range plans for forest research, forest products research, forest economics and such other matters as federal-provincial relations and liaison with the forest industries and the academic community. A Directorate of Program Co-ordination provides national co-ordination of forestry research programs and supervises national research services at Ottawa. Research institutes and laboratories conduct fundamental research within prescribed fields, supporting and complementing the research programs carried out in seven administrative regions—Newfoundland, the Maritimes, Quebec, Ontario, Manitoba—Saskatchewan, Alberta—Yukon Territory—Northwest Territories, and British Columbia. Forest surveys are conducted on federal lands throughout the country and advice and assistance on forest management are given to the administering agencies. The Department also provides for the management of forests, including timber disposal, in certain areas on behalf of other government departments. Co-operation is extended to the External Aid Office in administering technical assistance programs involving forest surveys in other countries. The Department's public informa-

* The Department of Forestry and Rural Development includes, under the administration of a separate Assistant Deputy Minister, a division responsible for rural development under authority of the Agricultural and Rural Development Act (ARDA) and the Maritime Marshland Rehabilitation Act, described at pp. 469-472; the administration of the Feed Grain Assistance Regulations, described at p. 487, is also a responsibility of the Department.

tion program includes the issuing of publications designed to increase public awareness of the importance of Canada's forest resources and the need for conserving them; the distribution of research publications and the interpretation of the scientific work of the Department to industry and to the general public; the dissemination of departmental and forestry information to the press, radio and television; the production of exhibits, displays and posters; and the maintenance of a photographic library dealing with forestry subjects.

The research functions of the Department and the Federal-Provincial Forestry Agreements program are described in the following paragraphs.

Research on Silviculture, Tree Biology, Forest Soils and Fire.—The objects of such research are (1) to provide basic information on the characteristic occurrence, growth, development and behaviour of forest tree species throughout the wide range of forest types and environmental conditions of Canada and (2) to develop and test new or improved methods for use in forest management and forest fire control. The programs are conducted throughout Canada, often in co-operation with other federal departments, provincial forest authorities, other research agencies, universities and industry.

A substantial portion of the research program in silviculture involves the study of factors responsible for the success or failure of natural regeneration following various methods of cutting and treatment of seedbeds, and the development of improved methods of regenerating forest stands following logging or fire and of creating forests on abandoned farmland, heathland or bogland. Different methods of seeding and planting are being compared, and increased emphasis is being given to problems associated with container planting. The effects of mechanization of logging on reproduction and on slash and soil conditions are being investigated. Studies of different methods of stand tending such as pruning, cleaning and thinning are under way to determine means of increasing both quantity and quality of wood production. Investigations of successional changes are under way in most of the important forest types and the relation of forest growth to site are being studied with a view to the assessment of long-term productivity. The requirements of light, temperature and moisture that will produce optimum conditions for growth and development are being determined for seedlings. The physiological processes of growth and reproduction are under investigation for a limited number of species. In tree breeding, superior strains are selected or developed and there is a continual improvement in propagation and breeding techniques. Research in forest land encompasses forest geography and land classification. Research in soils is directed toward determining the relation of tree growth and nutrition to chemical and physical properties of the soil.

Improved techniques for determining tree and stand volume are being developed and the various factors that influence growth are being investigated and quantified. Considerable attention is devoted to the evaluation of existing forest inventory methods and to developing new and improved techniques which incorporate the use of large-scale aerial photography. Studies of methods to estimate stand volumes from air photographs are continuing. Increased attention is being given to studies of growth and yield of typical forests and mathematical models are being developed to describe the growth responses of stands and individual trees.

Adequate protection of forests against fire is of vital importance in Canada. The Department works in full co-operation with provincial forest services in almost all phases of forest fire control and has made major contributions in the fields of forest fire danger measurement and forecasting and in fire control planning. Investigations are being made of forest fire behaviour, of the use of prescribed fire for hazard reduction and seedbed preparation, of better methods of reporting forest fires, and of fire damage appraisal and related factors in forest protection standards. Studies are being continued in the use of chemicals for fire suppression and pre-suppression, of fire fighting equipment and techniques, and of the use of aircraft in forest fire control. Another important field of endeavour is the study of fire hazard created by slash from various kinds of logging practices for different species.

Forest Products Research.—This work is directed toward obtaining background data on the properties of Canadian woods, developing new and better uses for wood products, improving methods of processing, and effecting more complete utilization of wood substances. Activities cover all major aspects of forest products and include the determination of the physical, mechanical, chemical and anatomical properties of wood and their relation to adaptability in use; studies of factors affecting quality of wood and of manufactured wood products; determination of factors that cause wood waste in logging and manufacturing; investigation into fire retardant treatments, the preservative treatment and painting of wood and the use of wood for the manufacture of a variety of products by chemical or mechanical means; and studies to determine possible new economic and more valuable uses for woods and to determine methods for the economical utilization of all wood substances available from the annual timber harvest.

The program is conducted mainly at two laboratories—at Ottawa and Vancouver—with units consisting of timber engineering, containers, glues and gluing, veneer and plywood, timber physics, wood chemistry, pulping, wood preservation, paints and coatings, wood pathology, products entomology, wood anatomy, logging, lumber manufacture and lumber seasoning. Research results are made available to the thousands of plants comprising Canada's timber-manufacturing and wood-using industries. Liaison is maintained with these industries to ensure that the research being conducted is of optimum national benefit. There is also constant co-operation with various government units in the performance of many investigations concerned with the use of wood. Research into the use of wood in housing construction and as an engineered material continues in co-operation with the National Research Council and the Central Mortgage and Housing Corporation.

At regional establishments, products research is planned on utilization problems of regional interest, and products liaison officers visit sawmills and other wood-working plants to keep industry aware of research developments and technical advances and, on the other hand, to keep the department informed of field problems on which research would be of value.

Departmental personnel serve on many national and international technical committees concerned with forestry problems and continuous collaboration is maintained with forest products laboratories in other countries for the dual purpose of exchanging information and avoiding duplication of research.

Forest Insects and Diseases.—Research on forest insects and diseases is conducted at regional laboratories and field stations in all principal forest regions of Canada. A Canada-wide survey is undertaken in co-operation with the provincial forest services and forest industries to maintain an annual census of forest insect and disease conditions and to detect and predict the occurrence of outbreaks. Survey results are made available to owners and operators of forest lands for use in planning salvage programs and directing control measures to reduce damage.

Laboratory research programs are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects and diseases of tree seedlings in forest nurseries. Research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi. Problems of national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated.

Experiments are also carried out in insect and disease control, utilizing cultural techniques, chemicals and biological control agents including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating quarantine programs, possibilities of eradication or control, or other applications of research results. Examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of

cull surveys to improve forest inventories; consultation and advisory services for local authorities on the Dutch elm disease problem; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick, the jack pine budworm in Manitoba, the ambrosia beetle in British Columbia, and the European pine sawfly in Ontario.

Federal-Provincial Forestry Agreements.—The passing of the Canada Forest Act in 1949 was an event of great significance to federal-provincial relations in the field of forestry, as authority was given to the then Minister of Mines and Resources to "enter into agreements with any province for the protection, development or utilization of forest resources". Subsequently, this Act was replaced by the Department of Forestry Act in 1960 (renamed the Forestry Development and Research Act in 1966). Since the beginning of these agreements have been entered into with most provinces; these provided for federal financial support for programs of forest inventories and reforestation, for the purchase of capital assets to be used in forest fire protection and for forest access and stand improvement projects.

Under the Act, a composite forestry agreement was entered into with the provinces for a term of two years ending Mar. 31, 1967. This agreement included in "a single package" the federal aid available for the above-mentioned purposes and also gave the provinces considerably greater freedom to allocate funds among the specified fields of work. A total of \$7,910,000 of federal funds was available annually, the allocation to the provinces being in proportion to their productive forest areas.

Federal assistance was based on payment of 50 p.c. of provincial costs but reforestation was the one exception; the Federal Government paid \$15 per thousand trees planted, \$2 per acre seeded with ground preparation, \$2 per acre seeded without ground preparation and \$2 per acre for seedbed preparation to promote natural regeneration and, in addition, contributed 25 p.c. of the cost of establishing or expanding forest nurseries. Costs of management-type surveys were included in the agreement as sharable, and the reforestation of occupied or unoccupied Crown land qualified for assistance provided it was carried out by the province.

Since 1951, nearly \$64,000,000 in federal funds has been contributed to the provinces under the main forestry agreements, plus \$6,927,000 for aerial spraying in New Brunswick against budworm infestations and, on a smaller scale, in British Columbia and Quebec against the budworm and jack pine sawfly, respectively, \$712,000 under a special forest improvement agreement with Nova Scotia designed to provide woods experience for coal miners laid off in the Cape Breton area and about \$118,000 for special surveys in the Province of British Columbia, for the purpose of determining the extent of the balsam woolly aphid infestation in that province.

Work accomplished with federal assistance has included the completion of forest inventories by seven provinces. Most of the provinces instituted programs concerned with management-type inventories and at the same time were maintaining their initial inventories in a reliable state. As a result of these inventories, new woods operations have sprung up, particularly in the British Columbia interior, and new pulp and paper mills have been built or are planned in other areas of Canada. The Federal Government has contributed under the agreements to the establishment of 16 new forest nurseries and five seed-extraction plants and to the planting of 349,277,000 trees. Federal contributions of \$19,731,000 have been used for the purchase of fire towers, radios, motor vehicles, bulldozers, muskeg tractors, power pumps, hand pumps, hose and aircraft, for the construction of buildings required for the prevention, detection and suppression of forest fires and the charter of aircraft for patrol, transportation and water-dropping purposes. Several hundred access projects designed to improve protection and permit the management of undeveloped forest areas have been undertaken, resulting in the construction of nearly 4,300 miles of road and 45 airstrips, with the Federal Government contributing more than \$23,513,000.

Subsection 2.—Provincial Forestry Programs

All forest land in provincial territory, with the exception of the minor portions in National Parks, federal forest experiment stations, military areas and Indian reserves, is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland.—Geographically, the Province of Newfoundland has two separate regions—the Island and Labrador on the mainland. The productive forest land is estimated at approximately 30,000 sq. miles about equally divided between the Island and Labrador. Most of Labrador's forests are leased but are as yet virtually untouched.

A large part of the forest land in the interior of the Island is leased, licensed or owned by paper companies, but a three-mile-wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local populations. Within this coastal forest belt, every household has legal right to cut 2,000 cubic feet of wood a year for domestic use. This form of cutting is generally without intense control or restriction but a policy is being introduced whereby cutting in certain 'management areas' is controlled by Forest Service Officers. Approximately one half of the Crown forests are at present under management. Commercial timber-cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government.

The Island is divided into three forest regions, each of which is subdivided into five districts. Each region is under the control of a regional forester and each district is headed by a district ranger with a staff of rangers and assistant rangers. Twenty-five well-equipped forest fire depots and 20 lookout towers, connected by radio-telephone to district and regional offices, are operated by the Newfoundland and Labrador Forest Service; others are operated by the two paper companies which maintain their own forest fire protection organizations.

Forestry operations in Labrador are under the supervision of a regional ranger located at Happy Valley (Goose Airport). Forest fire protection bases are located near Goose Airport and at Labrador City, Churchill Falls, Cartwright and Makkovik.

The Forest Service operates 10 fixed-wing aircraft for forest fire detection and suppression and three helicopters for transporting men and equipment. The permanent Forest Service staff of approximately 90 persons is doubled during the fire season with the addition of seasonal employees.

Prince Edward Island.—Roughly one third of Prince Edward Island's 2,184 sq. miles of land is tree-covered. The wooded areas consist of scattered patches throughout the province, the greatest concentration being in the eastern section. All of the woodland is privately owned with the exception of some 3 sq. miles of federal Crown land and about 6 sq. miles purchased recently through ARDA and turned over to the Crown in the right of the provincial government. The Forestry Division, Department of Agriculture, administers all forestry matters in the province but is mainly concerned with reforestation, protection and woodlot improvement. Although forestry is of secondary importance to the province, nevertheless the woodlots aid greatly in maintaining moisture for agriculture and form breaks against the average 15-mile-an-hour winds that blow across the Island.

The reforestation program has been increasing year by year, with as many as 500,000 trees being planted in one year on provincially owned and privately owned marginal and submarginal land. The forest management programs include the provision of access roads into Crown land areas and woodlot improvement; improvement cuts act as demonstration areas to the public, 4-H Forestry Clubs, and Boy Scout and Girl Guide groups. Fire protection is not too serious a problem. Wooded areas are relatively small and scattered and are all accessible by road so that equipment can be rushed to the scene of a fire quickly and easily.

Nova Scotia.—Of Nova Scotia's land area of 20,402 sq. miles, 16,274 sq. miles are classed as forested and 93 p.c. of the latter is regarded as productive. Although 91 p.c. of the forest land in Canada is held by the Crown in the right of the federal and provincial governments, only 22 p.c. is so held in Nova Scotia.

The provincial Crown lands are administered by the Department of Lands and Forests through a staff of foresters and rangers. Also, trained provincial personnel are employed with some of the forest industries in the administration of privately owned forest lands. The Department administers the Lands and Forests Act as it pertains to all lands, and is responsible for forest fire suppression. Forest fire detection is facilitated through 31 observation towers and an aerial patrol service, all integrated with land vehicles and headquarters by radio and telephone communication systems. Fire suppression crews and rangers with equipment are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia. There are in operation about 450 sawmills of various types and sizes, one newsprint mill, two groundwood pulp mills and a chemical pulp mill. These mills processed around 235,000 ft.b.m. of sawn materials and about 580,000 cords of round products in 1966. With the addition of output from a new large hardboard plant and a second chemical pulp mill both of which began operations in 1967, the roundwood output for 1967 is expected to be increased by some 380,000 cords.

The reforestation program, active since the 1930s, is being expanded about three-fold by the enlargement of the main Lawrencetown nursery and the establishment of a new forest nursery on Cape Breton Island. Experimental work on soil capability and site preparation on fire barrens is being continued. In 1966 about 1,000,000 seedlings were planted, mostly on non-forested land.

Forest management programs include the construction of access roads into Crown land timber areas, and stand improvement under federal-provincial agreements. Timber pulpwood and Christmas trees are sold through public tender, and cutting on Crown land is done under recommendation of district foresters of the Department of Lands and Forests. Management cruises, regeneration studies and experimental cuttings are conducted on Crown lands, and an active program of operating these lands under sustained yield management plans is well under way. Silvicultural techniques, including thinning conversion cutting, aerial and ground fertilization, bog-plowing and the use of silvicides were applied to 10,000 acres of Crown lands in 1966 under a provincial-federal program.

Forest research is carried on by Federal Government agencies and the Nova Scotia Research Foundation. Investigations cover stand improvement, tree nutrition, cutting methods, and insect and disease activities. Extension projects include fire prevention, a film program for schools, distribution of information on forest and wildlife conservation, promotion of the Christmas-tree industry, woodlot improvement, preparation of materials for the mass media, and technical assistance to sawmill operators.

New Brunswick.—Of the total land area of New Brunswick (27,835 sq. miles) approximately 86 p.c. is classed as productive forest, of which the Crown, in right of the province, owns about one half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. The results of a provincial forest inventory, part of the national forest inventory, were published in 1958. The total volume of standing timber in the province is estimated at 16,900,000 M cu. ft.; coniferous species make up 7 p.c. and deciduous species the remainder.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Department of Natural Resources which also carries out duties in connection with game management and protection, provincial parks, and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the federal and provincial governments and by representatives of the forest products industries. Forest Management Licences authorize operators to cut

and remove forest products in accordance with forest management plans and cutting permits. Royalty is paid to the province when products are cut by the licensees.

New Brunswick does not maintain a forest research organization but co-operates with the federal Department of Forestry and Rural Development in that field. The University of New Brunswick has also undertaken a small number of forest research projects in co-operation with the National Research Council, the provincial government and other interested organizations.

In the field of education, the University of New Brunswick offers undergraduate and graduate courses in forestry leading to B.Sc.F. and M.Sc.F. degrees. It is also responsible for the administration of the Maritime Forest Ranger School in conjunction with the Governments of New Brunswick and Nova Scotia and with private industry. The forest extension services of the University assist both government and private agencies in the direction and planning of various forestry extension programs. The provincial Department of Agriculture also provides an expanding extension service to the owners of farm woodlots.

Quebec.—The forests of Quebec cover an area of some 378,000 sq. miles and extend from the southern boundary to an irregular line roughly following the 52nd parallel on the north, and from the Ontario boundary on the west to an irregular line following the Atlantic Coast on the east. Of these forests, 34 p.c. are limits or are reserved for specific purposes under forest management plans and are utilized mainly to supply the large pulp and paper mills and the sawmills of the province. Private forests account for about 10 p.c. of the total forest area and for about one quarter of the annual cut. The remaining 56 p.c. has not as yet been completely inventoried and is largely unoccupied but it is expected that this area will soon be under full management and be available for exploitation to meet the ever-increasing needs for wood products. Some logging is now being done in the accessible parts of the area.

The administration of the public forests is the responsibility of the Woods and Forests Branch of the Quebec Department of Lands and Forests, the functions of which include management, control and supervision. Also, under certain circumstances when the interest of a group so requires, the Department may engage in management of private forests. The Department is involved, both directly and through various organizations, in forest fire protection and insect and disease control, and also operates a number of nurseries located throughout the province which supply plants necessary for restocking areas where natural reproduction is inadequate. The present nursery stock totals about 70,000,000 seedlings.

Because Quebec's forests are of prime importance to the economy of the province and to that of Canada, the Department of Lands and Forests maintains continual revision of its forest policies in line with progress in all aspects of forestry, with a view to increasing this valuable capital asset and its returns.

Ontario.—The boundaries of Ontario enclose an area of 412,582 sq. miles—83 p.c. land and 17 p.c. water. Forest lands comprise 75 p.c. of total land, of which 164,600 sq. miles are classified as productive. The Crown owns 90 p.c. of the productive forest land. Although 84 tree species (exclusive of the hawthorns) occur within Ontario, four species (black spruce 29 p.c., poplar 19 p.c., jack pine 13 p.c. and white birch 11 p.c.) account for almost three quarters of the total volume of standing trees. The total volume of merchantable standing timber is estimated at 111,000,000 M cu. ft.—60 p.c. softwoods and 40 p.c. hardwoods.

Crown forests are administered and managed through the Department of Lands and Forests, which has 10 branches at Head Office and 22 forest districts (grouped within three regions). The Branches may be classified as service (Accounts, Law, Operations, Personnel, and Research) and operating (Fish and Wildlife, Forest Protection, Lands and Surveys, Parks, and Timber). The list of operating Branches indicates that a multi-use concept of forests is practised but only the programs that foster the growth and use of timber as a crop are discussed here.

Management.—The original function of the Timber Branch was to arrange for the orderly sale of timber and this important function is still carried out along traditional lines—operators are granted a licence to cut specified timber for which they pay stumpage at contractual rates on the measurement (scale) of products removed. However, the details and techniques of utilization are undergoing constant improvement. Although Ontario's forest-based industries have long been a Canadian leader in terms of diversity of products and value of shipments, there is still a surplus of timber over actual cutting in the province. To ensure the continuing supply of timber of the type required by industry, an effective management policy has been conceived. Continuing forest inventories, using aerial photographic methods in which the province pioneered, provide an up-to-date record of the forest wealth, showing the species and other characteristics of stands and their geographical distribution. Inventory data are then applied to management planning; the province has been divided into 205 management units, each homogeneous with respect to forest and use patterns. Long-term plans set out regulations on the volume and location of cuttings and include programs for regeneration and tending that will sustain yields. As of 1967, 149 plans (71 Crown, 52 company, and 26 agreement forest) were completed for approximately 155,000 sq. miles.

The Timber Branch is also responsible for the maintenance and improvement of forest production on Crown lands. It operates 10 forest tree nurseries (with their supporting tree seed collection, treatment, and storage plant), currently geared for an annual output of 60,000,000 units. In addition to plantings by Departmental staff, regeneration agreements have been signed with all major licensees under the terms of which they assume responsibility for the conduct of projects, receiving payment at an agreed rate for work completed. Other annual silvicultural measures include the direct seeding of 9,000 acres scarification and other treatment for natural regeneration on 20,300 acres, and stand improvement treatment (cleaning, thinning, pruning, etc.) on 47,200 acres.

Over the past few years, the Research Branch has been developing a "tubeling" approach to planting, as a conventional planting substitute possessing greater flexibility both in nursery production and in length of planting period per year, so that unforeseen conditions, such as large burns, can be stocked promptly. Briefly, the procedure is to place 200 open-end, split plastic tubes (about $\frac{1}{2}$ " \times 3") in a tray, add soil, seed and covering material, and germinate in portable plastic-covered greenhouses. The tubes and seedling can be inserted intact into the ground at a rate of about 250 per man-hour. The technique was made operational in 1966 and 17,000,000 tubelings of various species were planted. During 1967 the objective was the planting of 25,000,000 tubelings.

For half a century, Ontario has had enabling legislation that permits municipalities to place abandoned and submarginal agricultural lands, to which they have acquired title under agreement with the Department of Lands and Forests, which undertakes to plant and manage the properties for a specified period of time—usually 50 years. Nearly 200,000 acres currently under such agreements have been managed intensively, the plantations receiving regular thinnings. The trees removed are in demand for pulpwood, posts, poles and sawlogs, making the undertakings financially attractive. In addition, the properties that are close to centres of population are acquiring tremendous value as recreational areas.

Owners of private land may purchase planting stock for forestry purposes from government nurseries at nominal prices and may also receive free professional advice on any forestry matter, including silviculture, harvesting and marketing. Under the Woodland Improvement Act, 1966, it is possible to have planting and improvement work carried out completely under government direction and mainly at its expense. In return, the owner is required to meet a few modest demands that ensure his good faith.

In Ontario, the utilization of timber crops, the processing of forest products and the distribution of commodities of wood to markets are functions of private enterprise. Primary mills licensed in 1966 and supplied principally from provincial forests include 2 pulp and paper mills, 28 veneer and plywood mills and 890 sawmills of all types. Although

the consumption trend for wood is upward, the costs of wood at the mills have also been increasing and this has led to increased mechanization and, in turn, to entirely new technologies of logging and product transfers. These changes have put pressure on the traditional methods of wood measurement, and the Department has adopted or is further testing alternative practices including (1) tree length scaling, (2) weight scaling, (3) sample scaling, (4) measurement of log diameters to the full inch, and (5) log grading. In addition, the data and the invoicing of licensees are being computerized.

Certain parts of the Crown forests remain under-developed. For such areas, the Economics Unit has undertaken feasibility studies and has had a principal role in getting new firms to establish. Other functions of the Unit include co-operation in expanding the available statistical information for the forestry sector, development of economic guides for timber management, analysis of current manufacturing costs and market prices, evaluation of the impact of policy decision and economic services to other Branches.

Protection.—The area under organized forest protection in Ontario totals 179,900 sq. miles and includes the main central band of accessible forests. This area is organized into 21 fire districts and further subdivided into 54 chief ranger divisions for the purpose of forest protection. South of this area, in the highly developed agricultural counties of southern Ontario, the municipalities are responsible for fire control; the vast inaccessible areas to the north of the fire districts, totalling some 147,000 sq. miles, do not support significant stands of merchantable timber and, except for communities or other special values, are not protected. Within the five districts, agreements were in effect in 1966 with 214 municipalities and 234 timber licensees for the prevention and control of forest fires. An agreement was also in effect with the Federal Government for the protection by the Ontario Department of Lands and Forests of 873,000 acres of Indian lands in the province. The average annual number of fires for the 1957-66 period was 1,489 and the average annual burn was 143,708 acres.

Forest fire detection is accomplished through a combined lookout-tower and aerial patrol system as well as reports from the public. During 1966 an experimental series-radar system was used to plot lightning storm movement in northwestern Ontario with the objective of delineating areas requiring intensified detection for lightning fire coverage. Also, 300 northern Ontario Indians were recruited and trained to provide a readily available body of skilled forest fire fighters at various key centres. Prescribed burning for hazard reduction and site preparation purposes was carried out on 21 burns covering 4,535 acres. The new water-bombing system, utilizing the interior of aircraft floats to carry the water load, was applied on 135 fires. At the end of the year, the fleet consisted of 29 Beavers, 10 Otters, one Twin Otter and one Super Widgeon; five helicopters were leased during the fire season. The communications system included 320 ground stations, 352 lookout-tower radios, 15 patrol vessel radiotelephones, 579 mobile radiotelephones, 1,218 portable fireline radios, 41 aircraft radio installations and 60 portable aircraft radiotelephones.

Forest pest control was carried out on about 11,500 acres of Crown-owned or Crown-managed forest lands in 1966. The main effort was concentrated on the white pine weevil, the European pine sawfly, the white pine blister rust and the fomes root rot. To provide additional skilled labour for removal of diseased elm trees, the Department initiated and co-ordinated an interdepartmental project to train 55 young Indian men for this work.

Manitoba.—The administration of Manitoba forests is controlled by the Forestry Branch of the Department of Mines and Natural Resources. The Province is divided into four regions, each under a Regional Director who is responsible for the field administration of forests in his region. The Regional Director works under policy guidelines established by the Forestry Branch, relating to timber disposal reforestation and fire protection.

The Forestry Branch co-ordinates control measures for the propagation, improvement and management of the forests, the harvest of forest products, and forest inventory surveys. Two nursery stations are maintained to supply stock for reforestation of denuded Crown

land and some natural seed areas have been established for nursery stock. Seedlings are supplied to farmers for shelterbelts and woodlots and to commercial Christmas tree producers and an average of more than 3,000,000 are planted each year in reforestation projects on Crown lands. The program of forest stand improvement comprises thinning, clearing and chemical spraying to remove undesirable species and encourage growth of preferred trees. Forest inventories cover about 5,500 sq. miles annually and, on the basis of these inventories, working plans with annual allowable cuts on a management unit basis have been brought into operation.

Timber-cutting rights are awarded by Forest Management Licences, Timber Sales and, in certain cases (particularly for salvage operations), by Timber Permits. Forest Management Licences may be granted for periods of up to 20 years and are renewable; Timber Sales may be for varying periods from one year upward and Timber Permits for periods of up to one year. At present, one long-term Pulpwood Berth with an area of 2,745 sq. miles and 10 long-term Timber Berths, all granted prior to 1930, are in force. A second Pulpwood Berth agreement was signed early in 1966, covering the construction of a pulp mill and sawmill at The Pas in northern Manitoba.

The area of the province under forest fire protection is 128,370 sq. miles with zones of priority established in the less accessible areas. Fires are detected through a comprehensive network of lookout towers and supporting air and ground patrols, all tied together by radio and Departmental or public telephones. Two Canso water-bombers and two helicopters are rented for the worst of the fire season to supplement the nine aircraft of the Manitoba Government Air Service.

Manitoba co-operates with several federal services which maintain two research areas in the province, and works closely with federal authorities in investigating and controlling forest damage resulting from insects and diseases. Public education in the fields of fire prevention and forest conservation is carried out and use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

Saskatchewan.—The forests of Saskatchewan are located mainly in the northern half of the province and cover 117,738 sq. miles, or 53 p.c. of the total land area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of five divisions—Administration, Fire Control, Forest Management, Inventory and Silviculture—is responsible for developing and evaluating forest policies and management programs. The responsibility for carrying out such policies and programs is borne by the various regional administrative authorities. For purposes of resource administration, the province, with the exception of the most northern portion, is divided into three regions, each under the supervision of a regional superintendent. The regions are subdivided into conservation officer districts which vary in size according to resource base and population to be served. In the most northerly part of the province, because of various special programs with northern residents, resource administration is the responsibility of the Northern Affairs Branch of the same Department. Close liaison is maintained between the Forestry Branch and the various regional authorities.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 73 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by three aircraft on regular patrol duty during the high-hazard periods. Northern Saskatchewan's communication system, with more than 990 two-way radio sets in operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities are assisted by the use of three helicopters and seven aircraft equipped for water dropping.

Alberta.—The 157,595 sq. miles of provincial forest in Alberta are administered by the Alberta Forest Service of the Department of Lands and Forests at Edmonton. The Service, headed by the Director of Forestry, is composed of five Branches—Administration, Forest Protection, Forest Management, Forest Surveys and Planning, and Forestry Training. For ease of administration the forest area is divided into 11 Forests, each responsible for the forest within its boundaries. These Forests are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his superintendent. Each Forest staff includes: forest superintendent, fire control officer and assistant, forester, mechanical foreman, carpenter foreman, equipment operators, scalers, land-use officers, radio operators, clerks, stenographers, and seasonal help such as standby fire crews, lookout men, general labourers and construction crews. Some Forests employ minimum security crews on management, protection and construction projects.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, maintains the equipment inventory and deals with personnel.

The Forest Protection Branch has charge of all phases of protection including prevention, detection, suppression and use of forest and prairie fires. The Branch also plans, supervises and executes the construction and maintenance of the road and building programs and supervises the radio communication facilities.

The functions of the Forest Management Branch include the acceptance and approval of management and annual operating plans prepared for leased and licensed Crown lands, implementation of management plans prepared by the Department, supervision of proper land-use practices and the disposal of Crown timber. This extends to all phases including processing of timber applications, selection of timber to be sold, cruising of merchantable timber, inspection of cutting areas to ensure proper logging and utilization practices, scaling of forest products, collection of dues and fees and reforestation programs for areas denuded by cutting and fire. It is also responsible for the implementation and supervision of the new timber quota system.

The Forest Surveys and Planning Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long- and short-term management plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; develops and supervises recreational area plans; provides regulation of geophysical activities in the forest area; and provides technical drafting and mapping services.

The Forestry Training Branch prepares training material and conducts training programs for Departmental personnel and other persons concerned with activities of fire control, forest management, forest protection and conservation. It also provides the facilities and instruction for the second year of a two-year forest technology course provided by the Northern Alberta Institute of Technology, and supervises the Provincial Junior Forest Ranger Program.

One Forest and part of two others are included in the Rocky Mountains Forest Reserve. This area is administered by the Alberta Forest Service but decisions of the Director of Forestry are based on policies of wise watershed regulation formed by the Eastern Rockies Forest Conservation Board. The Board comprises one federal and two provincial members. This reserve includes part of the headwaters of the main Prairie Provinces river system. Research in general is carried out by the federal Department of Forestry and Rural Development, which maintains the Kananaskis Experiment Station.

British Columbia.—The productive forest land of British Columbia is inventoried (1958) at 208,411 sq. miles with an additional 59,227 sq. miles of forest land classed as non-productive. Of the productive area, immature timber occurs on 95,739 sq. miles; 84,275 sq. miles carry mature timber estimated at 251,000,000 M cu. ft.; and 28,397 sq. miles are unclassified, including areas of burn, cut-over or windfall not yet re-stocked.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson.

Further decentralization of authority is effected by subdivision into Ranger Districts, of which there are approximately 25 in each Forest District. Twelve directional, servicing or policy-forming Divisions constitute the head office of the Forest Service at Victoria.

Efforts continue to bring British Columbia's forest resources under sustained-yield management and the forest industries are making progress toward more complete utilization of their raw materials. The problem is urgent despite the fact that, with a present annual scale of approximately 1,602,000 M cu. ft., the total inventory would appear sufficient to support current needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. The over-cut coast (wet belt) forests now account for about 56 p.c. of the total forest cut each year and the interior for 44 p.c. For all practical purposes, the entire interior forest is publicly owned; the great majority of privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area. Tree Farm Licences are subject to re-examination for renewal every 21 years. Provincial Forests, Pulp Harvesting Forests and Public Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Of major interest is the Pulpwood Harvesting Area plan, unique in North America, which calls for the integration of a 'sawlog' economy with a new pulp industry; five of these Areas have now been established—three in Prince George Forest District, one in Prince Rupert Forest District and one in Kamloops Forest District. Management, silviculture, roadbuilding and protection on such Areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and those Timber Sales issued outside 'regulated' areas.

Forest fire prevention techniques and organization for effective forest fire suppression are vital aspects of planned sustained-yield management. A greatly expanded pulp industry, added to the long-established logging and sawmill industries, has increased the necessity for more adequate fire control. Extensive use is made of aircraft under various terms of contract. Air tankers and fire-spotter aircraft are employed during the fire season and helicopters and other aircraft are employed under contract for patrol duties and for the transport of fire suppression crews. The rugged topography and the many remote and sparsely populated areas of the province demand the availability of a variety of transportation methods to tie in with fast discovery and early attack on all forest fires.

Close liaison with the federal Department of Forestry and Rural Development, through facilities at Victoria and Vernon, provides detailed information on insect and fungal enemies of the forest and on fire research.

Subsection 3.—The Pulp and Paper Research Institute of Canada*

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodland operations and pulp and paper mill operations. In addition, in co-operation with McGill University, it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

* Prepared by Miss M. Daly, Pulp and Paper Research Institute of Canada, Montreal, Que.

The Institute's head office and main laboratories are located in Pointe Claire on the western outskirts of Montreal in a recently enlarged building constructed by the Government of Canada. Space provided by the University is also occupied on the campus of McGill University by Institute staff and students involved in the graduate education program. The Institute's facilities include: organic and physical chemistry, physics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp and paper. It has a staff of about 195.

The Institute's research activities comprise a basic program in pulp and paper research and in woodlands research, contract research, and technical services. The basic pulp and paper research program is supported by assessments from the Maintaining Membership (some 40 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a grant from the Canadian Pulp and Paper Association. The woodlands research program is supported by assessments on all member companies of the Canadian Pulp and Paper Association east of the Rockies that use pulpwood and by a grant from the Association. Both programs comprise research of interest to the industry broadly, as distinct from that which is the concern of a single company only.

The projects in the basic programs range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles and for major engineering research and development projects which individual pulp and paper companies would find difficult to justify if the costs were not shared. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 40 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The Head of the Institute's Wood Chemistry Division, who is also the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made—cellulose, lignin and hemicelluloses. The Head of the Institute's Physical Chemistry Division, also a Professor in the McGill Chemistry Department, supervises graduate student work in polymer, surface and colloid chemistry with particular reference to those aspects that pertain to the physics and chemistry of pulp and paper. An Associate Professor of Chemical Engineering at McGill, who is a consultant to the Institute, directs graduate students in a variety of chemical studies. In addition, the Head of the Institute's Wood and Fibre Research Department, who holds a teaching appointment in McGill's Department of Mechanical Engineering, supervises graduate student investigations on such subjects as supercalendering of paper and frictional processes in polymeric systems. Other staff members who hold concurrent honorary positions at McGill as Research Associates assist in this student program.

The Institute also undertakes contract research projects on a cost-reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which stocks bibliographies, abstracts, translations and critical reviews for the use of the scientific staff and the industry.

No. 9 shaft at International Nickel's Creighton mine in the Sudbury district of Ontario will reach its maximum depth of 7,150 feet early in 1969. It is one of two new shafts being sunk at the Company's operating mines. Five new mines in the Sudbury district and three new mines at Thompson, Man., together with general expansion of processing facilities will increase the Company's Canadian annual nickel production capability by 100,000,000 to 150,000,000 lb. by 1970.

Section 1.—Canada's Mineral Industry—Historical and Current*

Historical

Canada's mining industry has a long history of exploration, development and production that pre-dates Confederation in 1867. In the 17th century, silver and copper were discovered in what is now Nova Scotia and the existence of coal on Cape Breton Island and bog iron deposits in the St. Maurice Valley of Quebec was known. Coal was produced in Cape Breton and iron ore for iron-smelting operations was produced in several communities of Quebec in the 18th century. However, it was not until the 1800s that development of mineral resources began on a significant scale and by the middle of that century there had been sufficient mineral activity to give promise of a major resource industry. A number of discoveries had been made in Eastern Canada but the most spectacular was the discovery of gold in British Columbia in the 1850s which brought thousands of people to that area. Settlement, railway construction, agricultural expansion and industrialization have followed many other mineral discoveries in later years.

In the second half of the 1800s mining activity began its accelerating trend, as indicated by a few of the most notable discoveries. In the 1860s a thriving oil industry was established in southwestern Ontario, following an initial discovery near Petrolia in the late 1850s. Asbestos was discovered in the Eastern Townships of Quebec in 1877. In 1883, nickel-copper ores were found at Sudbury in Ontario and in 1886 some 3,000 tons of copper ore were removed; today the area is the world's leading source of nickel. A number of gold, silver and base metal discoveries were made in southern British Columbia in the 1890s, including the great Sullivan mine, following an initial copper-gold discovery at Rossland in 1889. In 1896, the famous Klondike discovery in the Yukon precipitated the world's most spectacular gold rush. At the turn of the century, silver ore was discovered at

* Prepared under the direction of Dr. C. M. Isbister, Deputy Minister of the Department of Energy, Mines and Resources, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Division; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels and Mining Practice Division, Mines Branch. The Statistics in the tables included throughout the Chapter were compiled in the Industry Division of the Dominion Bureau of Statistics.

Cobalt in northern Ontario, soon followed by the discovery of many other major mining areas including the Porcupine gold mining camp in 1909 and Kirkland Lake in 1911. While exploration was continuing in northern Ontario and Quebec, leading to the Noranda copper find in the Rouyn district in 1921, oil and gas exploration in Western Canada resulted in the discovery of the important Turner Valley field near Calgary in 1913. The introduction of aircraft in mineral exploration in Northern Canada in the 1920s was a key factor in the discovery of pitchblende, a source of radium and uranium, at Great Bear Lake in the Northwest Territories in 1930, and in the finding of a number of gold and base metal deposits in the northern areas of the provinces, the Northwest Territories and Yukon Territory in the 1930s. The Leduc oil discovery in Alberta in 1947 was the beginning of Canada's present oil industry, one of the most thriving sectors of the mineral economy.

Since the immediate postwar period, mineral discoveries have been made in almost every region of Canada and the industry's rapid growth and increasing diversification have had a profound effect on the Canadian economy. The value of mineral output has risen from about \$500,000,000 in 1945 to just over \$1,000,000,000 in 1950 and to nearly \$4,000,000,000 in 1966. Canada now ranks as the world's third largest diversified mineral producer following the United States and the Soviet Union and is the world's largest exporter of minerals and mineral products.

The historical trend of the value of mineral production is shown in Table 1. Statistics are available from 1886 and are given for five-year intervals from that date to 1950 and annually for subsequent years. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but serve as a measure of the tremendous growth of this major industry.

1.—Value of Mineral Production, 1886-1966

¹ Value of Newfoundland production included from 1949.

The Mineral Industry in 1966

The Canadian mineral industry had another year of outstanding achievement in 1966 and established a new high in value of output. Exploration for new deposits and development of properties for production was extensive and widespread in all provinces and in the territories, and announcements were made of new projects and expansions that will increase appreciably the productive capacities for many commodities. Canada's mineral base thus becomes stronger each year, as diversification in output both by commodity and by source increases. The value of total mineral production in 1966 was \$3,972,481,000 compared with \$3,745,471,000 in 1965, an increase of 6 p.c. The metallics sector accounted for \$76,797,000 of the increase, the industrial minerals, including structural materials and non-metallics, for \$76,096,000, and mineral fuels for \$74,118,000.

2.—Value of Mineral Production, by Class, 1957-66

Year	Metallics	Non-metallics	Fuels	Structural Materials	Total
	\$	\$	\$	\$	\$
1957.....	1,159,579,226	169,061,110	564,776,791	296,905,265	2,190,322,392

1959.....	1,370,648,535	178,216,641	535,577,823	324,577,512	2,409,020,511
1960.....	1,406,558,061	197,505,783	565,851,829	322,594,308	2,492,509,981
1961.....	1,387,159,036	210,467,786	653,327,802	331,345,763	2,582,300,367
1962.....	1,496,433,950	217,453,009	780,932,387	356,166,833	2,850,986,179
1963.....	1,509,536,931	253,452,413	908,428,087	379,011,116	3,050,428,547
1964.....	1,701,648,538	287,497,000 ⁺	998,767,672	403,058,324	3,390,971,534 ⁺
1965.....	1,907,575,899	327,238,901	1,076,494,117	434,161,904	3,745,470,821
1966.....	1,984,372,572	363,387,717	1,150,611,731	474,108,899	3,972,480,919

The index of the volume of mineral production, which is a means of measuring the mining industry's absolute growth, was 393.6 (1949=100) compared with 365.6 in 1965. The comparative figures for the indexes for total industrial production for Canada were 274.5 and 254.9. The extent of the industry's growth is also evident from per capita comparisons (see Table 1). The per capita value of mineral output in 1966 was \$198.48, which was three times greater than the 1949 per capita value, compared with the increase in the per capita value of the gross national product of 2.4 times in the same period. Net value criteria, which measure value added in the production process, also point to the dynamic role of mining in the Canadian economy. The rate of increase in mining net value has been about 50 p.c. greater than the net value rate of increase for primary and secondary industries as a whole.

¹ Includes minor items not specified.

In terms of value of output, Canada's leading minerals are crude petroleum, copper, iron ore, nickel, zinc, natural gas and asbestos. These seven minerals accounted for 68 p.c. of the total output value in 1966. Table 4 shows the quantities and values of all minerals produced in 1965 and 1966 and Table 5 gives the percentages of the total value contributed by the 26 major items in each of the past ten years. Canada continues to lead the world in the production of nickel and zinc; is in second place in the production of asbestos, uranium, molybdenum, sulphur and gypsum; and stands high in the production of many other minerals including copper, cadmium, cobalt, gold, platinum group, potash, titanium, iron ore, lead, magnesium and silver.

Mineral markets remained strong in 1966, although there was evidence of weakening and conditions of over-supply for some commodities toward the year-end. Lead and zinc prices declined on all markets and voluntary production cuts were made by major producers in several countries. Copper remained in short supply with record prices being reached on the London Metal Exchange; copper was expected to remain in short supply throughout 1967 and perhaps longer as conditions of uncertainty, largely international in nature, are likely to continue. Nickel increased from 79 cents a pound to 85 cents (U.S.) and major expansion programs were announced by Canadian producers to help overcome a tight supply situation. Platinum metal prices fluctuated but were generally higher as supply from Eastern Europe became uncertain. Of the industrial minerals, prices of asbestos, potash and sulphur were higher and, before the end of the year, further increases were announced for 1967.

Many mineral commodities have contributed to the rapid rise in Canada's mineral output and in the diversification that has taken place. In each sector—metallics, industrial minerals and mineral fuels—giant strides have been made by certain minerals. Only in

recent years has Canada become a large producer and exporter of molybdenum, potash and elemental sulphur and only within the past 10 to 15 years has production of petroleum, natural gas, iron ore and uranium contributed significantly to Canada's value of mineral production and exports. The Canadian mineral industry is strongly export-oriented about 60 p.c. of output going to foreign markets. It is the country's leading export industry and in 1966 mineral materials in crude and fabricated forms to the value of \$3,123,000,000 were exported. About 60 p.c. of these went to the United States, 18 p.c. to Britain and 7 p.c. to countries of the European Common Market; the remainder had world-wide distribution.

The rate of growth of the mineral industry is dependent primarily upon Canada's competitive position in world mineral markets. Equally important is the continuing large-scale investment of capital for mineral exploration and development and the expansion of existing production facilities. Capital and repair expenditures in mining, quarrying and oil wells in 1966 reached a record \$1,383,000,000 compared with \$1,084,000,000 in the previous year. Canada is a world leader in the development and/or adoption of new mining techniques and mineral treatment processes so that its competitive position may remain high. To combat rising labour and material costs, overcome shortages of workers and continue with the development of mineral properties in more remote areas it is necessary always to strive for greater productivity and consequent lower cost. To this end research and development by governments and major mining companies play an increasingly important role and much attention is being given to relieving the shortage of engineers and scientists that has plagued the mineral industry in recent years.

In setting a new record in value of output in the metallics sector of the industry, there were many significant developments in Canada and throughout the world. Copper was Canada's leading metallic mineral in 1966 followed by iron ore and nickel. There was increased production of molybdenum and silver with other substantial increases assured for 1967. Canada's two largest nickel producers—International Nickel and Falconbridge Nickel—each embarked on expansion programs that will increase production capacity in Canada to about 700,000,000 pounds a year by 1970 from the current 550,000,000 pounds a year. Notwithstanding higher capacity and production, it is expected that nickel will remain in tight supply for some time. Production of both gold and uranium continued to decline. The outlook for gold continued to be bleak because of rising production costs and a fixed price received for gold but the outlook for uranium brightened considerably. Forecasts indicate that uranium requirements for nuclear-generated electric power will increase appreciably in the 1970s and that Canada will be a major contributor to world supply. Production by 1980 will probably reach, and perhaps surpass, the record 15,892 tons of U_3O_8 set in 1959 when it was the leading metallic mineral in Canada.

In the industrial minerals sector, the outstanding developments in the non-metallics during 1966 were again related to gains for potash in Saskatchewan and elemental sulphur from natural gas in Alberta. Gains will continue to be made by both these important commodities as natural gas production increases and further potash properties are developed in Saskatchewan. There was a growing shortage of elemental sulphur throughout 1966 with consequent price increases. This could lead to a critical shortage and substantially higher price because sulphur, primarily used for the manufacture of sulphuric acid, is one of the world's most needed commodities. It is possible that alternative materials such as pyrite (iron sulphide) may find increasing acceptance as a source of sulphur. It is expected that Canada will become the world's largest potash producer in the 1970s from the extensive beds that underlie much of the southern third of Saskatchewan. They constitute the largest and highest-grade potash reserves in the world and in addition to the three properties in production in 1966 it is expected that at least another six will reach production in the early 1970s. Production of asbestos was at an all-time high in 1966 at nearly 1,500,000 tons of fibre worth \$163,655,000. Canada and the Soviet Union each supply about 40 p.c. of the world's needs. The continuing high production of structural materials was a reflection of the high rate of construction activity throughout Canada.

The production of mineral fuels, embracing crude petroleum, natural gas, natural gas liquids and coal, again set a record in 1966 with crude petroleum and natural gas liquids being at new highs.

Provincial and Territorial Mineral Production in 1966

Ontario in 1966 continued as Canada's leading mineral-producing province, its contribution to the total value being 24.1 p.c. Following in order were Alberta with 21.3 p.c., Quebec with 19.2 p.c., Saskatchewan with 8.8 p.c. and British Columbia with 8.3 p.c. All provinces and territories increased their mineral output in 1966 with the exception of Ontario, Manitoba and the Yukon Territory. Although Ontario still leads in value of production, its share of the total has declined steadily from 37.6 p.c. in 1958 to the present 24.1 p.c. The steady rise in the percentages contributed by Alberta and Saskatchewan is attributable mainly to increased mineral fuels output and, more recently, to greater production of sulphur and potash. It is probable that the mineral production of Ontario and Quebec combined will continue to decline in percentage terms relative to the remainder of Canada because of greater geographical diversification of mineral production by source.

6.—Value of Mineral Production, by Province, 1957-66

Newfoundland and Labrador.—The mineral output of this province continues to be one of the most rapidly growing of all provinces or territories mainly because of increased iron ore production from Labrador. Total production in 1966 was valued at \$244,020,000 compared with \$207,558,000 the previous year and metallics output increased to \$225,338,000 from \$188,173,000. Iron ore contributed \$188,603,000 of the 1966 total, nearly \$32,000,000 more than in 1965. Of the more than 16,546,000 long tons of iron ore shipped, about 4,000,000 tons consisted of direct shipping ore from near Schefferville, Que.; about 7,000,000 tons were pellets and some concentrates from the Carol Lake project of Iron Ore Company of Canada at Labrador City; and most of the remainder was shipments of concentrate from Wabush Mines at Wabush in Labrador. Wabana Mines Division of Dosco Ltd. ceased operations on Belle Island near St. John's after more than 7 years of continuous operations. Plans were announced to increase the capacity of the Carol Lake project from 7,000,000 to 10,000,000 long tons a year and the Wabush Mine facilities from 6,000,000 to 7,000,000 long tons a year.

Production of copper, zinc and lead, mainly from the Buchans Mine of American Smelting and Refining Company, was valued at \$17,415,000, \$10,316,000 and \$6,500,000 respectively. Four other mines also produced copper concentrates from plants having mill capacities ranging from 1,150 tons a day to 2,250 tons a day and at least two other areas of copper mineralization were being explored by diamond drilling. Asbestos output from the Baie Verte deposit on the Island of Newfoundland was slightly more than 57,000 tons worth \$9,301,000. The total value of non-metallics output in 1966, at \$12,974,000, was down only slightly from the previous year and the value of structural materials output, at \$5,708,000, was also down slightly.

Prince Edward Island and Nova Scotia.—Prince Edward Island's mineral production is confined to structural materials, which had a value of \$2,757,000 in 1966.

Total value of mineral production in 1966 for Nova Scotia was \$85,417,000 compared with \$70,772,000 in 1965. The output of coal, which by value is the province's major mineral product, was about 7 p.c. lower than in the previous year. The output of non-metallics, valued at \$15,125,000, was about the same as in 1965, gypsum and salt contributing \$8,141,000 and \$4,725,000, respectively.

There has been a steady decline in coal production in Nova Scotia (and New Brunswick) over the past 20 years, during which time many of coal's traditional uses have been taken over by other mineral fuels, notably diesel oil, furnace oil and natural gas. The industry has operated under increasingly difficult conditions as costs continued to rise and markets continued to decline and has received financial assistance for many years under the long-standing federal coal subvention policy. In 1965, a Special Consultant on Coal was appointed by the Federal Government to study and recommend solutions to the Cape Breton coal problem. His report, tabled in the House of Commons on Oct. 11, 1966, recommended, in essence, that the subsidies supporting uneconomic coal production be shifted over the next 15 years to other forms of industrial development and economic activity in the Cape Breton area. The promotion and financing of the redevelopment of the Cape Breton economy is a joint federal-provincial project.

New Brunswick.—Total value of mineral production in New Brunswick in 1966 was \$90,221,000, of which \$69,386,000 was metallics output; zinc contributed \$43,003,000, lead \$15,497,000, copper \$6,366,000, silver \$4,349,000, cadmium \$97,000 and gold \$73,600. Brunswick Mining and Smelting Corporation, with mines near Bathurst and an associated lead-zinc smelter at Belledune Point about 25 miles north of Bathurst, is the province's major base metal producer. A new 2,250-ton-a-day mill started tune-up operations late in the year, bringing the company's total milling capacity to 6,750 tons a day. Brunswick Mining operates two mines and has large reserves of zinc-lead-copper ore and several other companies also have substantial reserves in the Bathurst area. The Wedge Mine of Cominco Ltd. and that of Heath Steele Mines Ltd., the province's other base metal producers, operated throughout the year. Production of mineral fuels, nearly all of it coal, was worth \$8,005,000 and that of structural materials was valued at \$10,934,000.

Quebec.—Quebec follows Ontario and Alberta in value of mineral production, having been displaced from second place in the mid-1950s as production of oil and gas in Alberta added substantially to that province's output. Quebec's mineral production value increased to \$762,945,000 in 1966 from \$715,901,000 the previous year. It is Canada's largest producer of zinc among the base metals and of asbestos among the non-metallics and is second only to Newfoundland in iron ore production. Mining of copper is widespread throughout the province and exploration for it and development of copper properties remained at a high level in 1966. Wexford Mines Ltd., with property in the Gaspé Park area, continued its exploration program to outline substantial reserves of medium-grade copper material. In northwestern Quebec, operations in all copper-producing areas—Noranda, Chibougamau, Matagami, Normetal and Val d'Or—continued at near capacity. In the Eastern Townships the two producers continued operations until strike action in September forced the closure of Solbec Copper Mine. Zinc output continued its year-to-year rise with production in 1966 totalling 293,000 tons, part of which was exported as concentrates and part of which was treated by Canadian Electrolytic Zinc Ltd. at Valleyfield. Two nickel producers reported production totalling 7,951,000 pounds of nickel in concentrates that were shipped to Sudbury in Ontario for smelting. Iron ore production came from three widely separated areas—direct shipping ore from Schefferville, iron ore concentrates from Gagnon, and iron ore pellets from Hilton Mines, Ltd., about 40 miles northwest of Ottawa.

Quebec continues to lead all provinces in the production of non-metallics, output in 1966 being valued at \$171,097,000 compared with \$158,000,000 in 1965. The province produced 1,341,000 tons of the 1,489,000 tons of asbestos fibre shipped from Canadian mines; it was valued at \$138,570,000 and came from the Eastern Townships where first production was recorded almost 90 years ago. Late in the year the postponement of the large asbestos project under consideration in far northern Ungava was announced. Several other non-metallic minerals are produced in Quebec but none of them had a value of more than \$4,000,000 in 1966 except titanium dioxide, made by the electric smelting of ilmenite at Sorel; its output was valued at \$20,505,000. The value of structural materials produced in the province reached an all-time high of \$135,590,000, reflecting a high rate of industrial and construction activity during the year. There is no production of mineral fuels in Quebec.

Ontario.—Ontario's mineral production in 1966 at \$957,858,000, the highest of all provinces, was slightly lower than its 1965 output of \$992,789,000. The main cause of the decline was a reduction in the production of metals by International Nickel from its Sudbury operations caused by strike action during part of August and September.

For many years nickel has led all metallics in value of production; output in 1966 was \$269,462,000 compared with slightly more than \$316,332,000 in 1965. In Ontario, the non-communist world's two largest nickel companies—International Nickel and Falconbridge Nickel—operate 15 mines, three smelters and a copper refinery in the Sudbury area, and International Nickel operates a nickel refinery at Port Colborne. For the recovery of nickel, Falconbridge ships nickel-copper matte to Kristiansand, Norway from its Sudbury smelter. The two companies are proceeding with production expansion plans for mining and processing facilities, which will continue until the early 1970s and will, by 1975, increase Canadian nickel production capacity to 800,000,000 pounds a year from approximately 550,000,000 pounds a year in 1966. Both companies are among the world leaders in the search for new sources of nickel in Canada and in many other areas of the world.

Copper output was also lower in 1966 than in 1965, being 202,976 tons compared with 216,272 tons. Thirteen companies operating 22 mines produced copper in the province during 1966. One of Canada's major base metal developments of the past decade came into production late in the year when Texas Gulf Sulphur Company began operating the first of its three 3,000-ton-a-day concentrator units at its property near Timmins. The Company has substantial reserves of good grade zinc-copper-silver ore and will be a large producer when operating at capacity about mid-1967. Production of iron ore at 8,144,000 tons worth \$91,701,000 was down slightly from 1965. Steep Rock Iron Mines with property at Atikokan, west of Port Arthur, completed its iron ore pellet plant. Two other properties being developed for pellet production—one at Bruce Lake near Red Lake and the other near Temagami—will begin production in 1967 and 1968. The three plants will have a combined capacity of about 4,500,000 tons of iron ore pellets a year. Uranium production from mines in the Elliot Lake area totalled 5,876,000 pounds of uranium oxide (U_3O_8) valued at \$42,758,000. Production of uranium has been declining steadily since the peak year of 1959 but estimates of the quantities that will be required for the generation of electric power indicate that a much higher rate of annual production will be required in the years ahead. As a consequence of the favourable outlook for uranium, many companies have intensified efforts in the Elliot Lake area and elsewhere in Canada to explore and develop additional sources of this metal.

The province's output of non-metallics was valued at \$23,709,000 in 1966, with salt, nepheline syenite and gypsum together contributing \$20,934,000 of that amount. Structural materials were valued at \$191,561,000, about the same as the previous year, and the output of mineral fuels was worth \$10,176,000, natural gas contributing \$5,940,000 and crude petroleum the remainder.

Manitoba.—Mineral output in the province was valued at \$179,241,000 in 1966, slightly lower than the 1965 value. Metallics production was valued at \$142,775,000, of which nickel contributed \$98,447,000, copper \$28,121,000 and zinc \$10,560,000. International Nickel operates the world's only fully integrated nickel production facility at Thompson. During 1966 the company continued to prepare two more mines for underground operation and one mine for open pit operation about 20 miles south of Thompson. Sherritt Gordon operates a mine and mill at Lynn Lake in northwestern Manitoba and a hydro-metallurgical refinery at Fort Saskatchewan in Alberta, where nickel and cobalt are recovered. When present expansion is completed in the Thompson area, it is expected that the province's nickel production capacity will be about 85,000 tons a year compared with the present 60,000 tons a year. Hudson Bay Mining and Smelting continued operations at four copper-zinc mines in Manitoba and at a central concentrator and copper and zinc smelters at Flin Flon. Hudson Bay smelts copper concentrates from Sherritt Gordon's Lynn Lake mine.

Structural materials output in Manitoba was valued at \$20,873,000 and that of crude petroleum at \$12,956,000, both up moderately from 1965 totals.

Saskatchewan.—Total value of mineral output in 1966 was \$349,304,000 compared with \$328,167,000 in the previous year. Mineral fuels contributed \$224,833,000, non-metallics \$71,983,000, metallics \$41,039,000 and structural materials \$11,448,000.

The year was highlighted by the substantial advance in oil and gas production and by the spectacular increase in potash output, the latter being accompanied by continuing wide-scale development of potash deposits in southern Saskatchewan. Three companies—International Minerals and Chemicals Corporation, Kalium Chemicals Ltd., and Potash Company of America—produced potash in 1966 at near-capacity levels. There were also 10 shafts and six potash refineries under construction at six other locations and two additional shafts were planned by companies already engaged in shaft sinking. A record 1,990,000 tons of potash (K_2O) worth \$62,665,000 were produced and it is expected that production will continue upward until the early 1970s when Canada's capacity, all from Saskatchewan, will be over 7,000,000 tons a year. It is probable that Canada will be the world's leading producer of this commodity following 1970.

Most of Saskatchewan's metals production comes from the base metals operations of Hudson Bay Mining and Smelting whose main mine straddles the Manitoba-Saskatchewan border at Flin Flon and from a second mine in Saskatchewan. Uranium production by Eldorado Mining and Refining from the Beaverlodge area in northern Saskatchewan totalled 1,988,000 pounds valued at \$11,577,000 in 1966, down slightly from the previous year. Exploration for uranium resources in the Beaverlodge area was accelerated because of the expected rapid growth in demand in the 1970s.

Alberta.—The fuels sector contributed \$776,285,000 to Alberta's total recorded mineral production value of \$846,679,000 in 1966. Alberta has long been Canada's premier oil-producing province, contributing about 65 p.c. of the country's total production. Natural gas output was valued at \$146,215,000 and natural gas by-products, not including elemental sulphur recovered from it, were valued at \$94,117,000. It was a particularly successful year for exploration and development of further oil and gas reserves and in finding markets for the province's growing output. The Rainbow Lake area, discovered in 1965, was being developed into what may become the country's largest single oil-producing area. It lies in northwestern Alberta and its extent by the year-end has not yet been fully evaluated. To serve growing markets, it is expected that oil and gas pipeline construction from Western Canada, particularly from Alberta, will be considerably higher in the next several years. Of particular significance to Alberta and to Canada will be the opening in late 1967 by Great Canadian Oil Sands Company of the first commercial plant for the extraction of oil from the Athabasca bituminous sands. It has been estimated that the sands constitute one of the world's largest single reserves of oil. There is little production of mineral commodities other than mineral fuels in Alberta. Of the \$39,119,000

production of non-metallics in 1966, over \$37,000,000 was credited to that of elemental sulphur recovered from the processing of natural gas; nearly all remaining mineral production was of the five structural materials.

British Columbia.—Mineral production in 1966 at \$330,844,000 was 18 p.c. higher than in the previous year. Metallics output was valued at \$193,360,000, mineral fuels at \$65,928,000 and structural materials at \$46,707,000.

The metallics sector of the mineral industry was highlighted by gains in production of molybdenum and copper, with property development under way for increasing production of each commodity. Molybdenum output came from three primary producers and one by-product producer. Copper production increased to 105,760,000 pounds from 85,000,000 pounds in 1965, with a value increase to over \$47,450,000 from \$32,000,000. Development of several large-tonnage copper properties was under way and proposals for developing others for early production were receiving serious consideration. British Columbia's production of molybdenum and copper is expected to rise appreciably in the years ahead. The province has long been Canada's main producer of lead and, until recently, of zinc, with output coming primarily from Cominco's operations in the south-eastern part of the province. Lead output of 209,494,000 pounds worth \$31,298,000 and zinc output of 305,124,000 pounds worth \$46,074,000 were both lower than in the previous year. Five iron ore producers shipped a record 2,152,000 tons, all of it to Japan. Exploration for base metal deposits and development of base metal properties remained widespread throughout the province, particular attention being paid to copper and molybdenum.

Asbestos production from Cassiar's deposit in northern British Columbia reached a record \$15,719,000, up slightly from 1965. Its value represented almost 63 p.c. of the province's non-metallic output and most of the remainder was attributed to sulphur, which is recovered as sulphuric acid from lead-zinc smelting and from the processing of natural gas. Output of mineral fuels was valued at \$65,928,000 in 1966, continuing its year-to-year advance. There is continuing encouragement in the search for and development of petroleum and natural gas resources in the northeastern part of the province.

Yukon Territory and Northwest Territories.—Mineral output in Yukon Territory was valued at \$11,976,000 in 1966 compared with \$13,400,000 in the previous year. All of it, except for cadmium worth \$306,300 and coal worth \$46,400, was attributable to the production of silver, lead, gold and zinc. Several developments of importance to the Yukon mineral economy occurred in 1966. United Keno Hill, toward the end of the year, announced that it was curtailing operations because of declining ore reserves; Clinton Creek asbestos deposit was readied for production in 1967 by Cassiar Asbestos Corporation; New Imperial Mines Limited continued development of its copper property a short distance south of Whitehorse for open-pit production in 1967; and final plans were awaited for open-pit zinc-lead production by Anvil Mining Corporation from its property northeast of Whitehorse where substantial reserves of material averaging above 10 p.c. combined lead and zinc have been indicated. It is probable that production from New Imperial and from Anvil would be shipped to Japan.

Production of metallic minerals in the Northwest Territories was valued at \$110,358,000, a substantial rise over the 1965 value of \$76,823,000 contributed by zinc output which increased from \$28,596,000 to \$57,128,000 and lead output which increased from \$25,678,000 to \$31,473,000; gold, at \$15,990,000, was slightly lower than in 1965. The large increase in lead-zinc shipments was the result of the first full year of operations by Pine Point Mines Limited from its holdings on the south shore of Great Slave Lake. The company shipped high-grade ore mined from richer portions of the surface deposits and concentrates of lead and zinc from a 5,000-ton-a-day concentrator. Shipments are made to the Trail, B.C., smelter of Cominco Ltd., which controls Pine Point Mines Limited, and to smelters in the United States, Japan and India.

^a Includes 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841,

Subsection 1.—Metals

The metallic minerals of greatest dollar value to Canada during 1966 were, in order copper, iron ore, nickel, zinc, gold, lead, uranium and silver. These eight metals, which accounted for 94 p.c. of the total value of metal production in 1966, and several other metals of importance are dealt with separately below.

Copper.—Mine production of copper in 1966 was 506,100 tons valued at \$453,524,000, a decrease of 1,800 tons but an increase of \$72,572,000 over 1965. Domestic consumption of refined copper increased and this, combined with a slight decrease in production, resulted in a decrease in refined copper exports. Lower mine output in Ontario, because of strikes at mines in the Sudbury area, was offset by increased production in Newfoundland, Manitoba, Saskatchewan, British Columbia and the Northwest Territories. New mines were brought into production in Newfoundland, New Brunswick, Quebec, Ontario and Saskatchewan. One mine was closed in British Columbia.

Six smelters for the reduction of copper and nickel-copper ores and concentrates are operated in Canada. In the Sudbury district of Ontario, International Nickel operates two smelters at Copper Cliff and Coniston, and Falconbridge Nickel produces nickel-copper matte at its Falconbridge smelter. Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man., smelts concentrates from its mines in Manitoba and Saskatchewan and copper concentrates from the mine of Sherritt Gordon at Lynn Lake, Man. Ores and concentrates from most of the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines Limited and the Murdochville smelter of Gaspé Copper Mines Limited, both in Quebec. Electrolytic copper refineries are operated by International Nickel at Copper Cliff and by Canadian Copper Refiners Limited, a subsidiary of Noranda Mines, at Montreal East, Que. Production of refined copper in 1966 was 433,900 tons, 200 tons less than in 1965.

Newfoundland's copper production from six mines in 1966 was 19,400 tons valued at \$17,415,000, an increase of 4,600 tons and \$6,268,000 over 1965. Consolidated Ramblin Mines Limited started production from its East mine and First Maritime Mining Corporation Limited continued development of its Gullbridge mine at Gull Pond. New Brunswick's three producers were joined by a fourth in 1966 when Brunswick Mining and Smelting Corporation Limited brought its No. 6 open-pit mine into production. Output in New Brunswick decreased in 1966 to 7,100 tons valued at \$6,366,000 from 10,100 tons at \$7,581,000 in 1965.

Production in Quebec was slightly lower in 1966 than in 1965 despite output from two new mines, totalling 172,000 tons valued at \$154,455,000 compared with 174,000 tons worth \$130,801,000. Production in 1967 should be higher with increased output from Murdochville and production from new mines at Chibougamau, Joutel and Matagami.

Strikes at the Sudbury area mines and a lack of skilled miners reduced Ontario's 1966 output to 203,000 tons valued at \$181,376,000 from the 216,300 tons worth \$161,665,000 in 1965. International Nickel produced nickel-copper ore from 10 mines in the Sudbury district and had four mines under development in the area. Falconbridge operated six mines and had two mines under development. Texas Gulf Sulphur Company started production from its open-pit mine near Timmins when throughput started in November at the first of three units in its 9,000-ton-a-day mill. Full production was expected in the first quarter of 1967. Canadian Jamieson Mines Limited started production at its copper-zinc mine near Timmins. Other copper-producing mines in Ontario include Kam-Kotia and McIntyre-Porecupine at Timmins; Copperfields at Timagami; Rio Algonquin at Spragge; Willroy, Willecho and Noranda's Geco at Manitouwadge; North Coast at Kashabowie and Metal Mines at Werner Lake. Production in 1967 is expected from Munro Copper Mines Limited near Matheson, from Tribag Mining Co., Limited near Batchawana and from Kidd Copper Mines Limited near Sudbury.

Manitoba-Saskatchewan's two major producers, Hudson Bay Mining and Smelting and Sherritt Gordon were joined by Anglo-Rouyn Mines Limited in 1966. Combined output from these mines was 50,900 tons valued at \$45,686,000, 1,300 tons more than in 1965. Hudson Bay operated a central mill and a copper smelter at Flin Flon, Man., on ores from the Schist Lake, Chisel Lake and Stall Lake mines near Snow Lake, Man., and from the Flin Flon mine that straddles the Manitoba-Saskatchewan boundary. Hudson Bay is developing the Osborne Lake, Anderson Lake and Ghost Lake mines near Snow Lake and the Flexar mine in Saskatchewan. Sherritt Gordon produced copper concentrates at Lynn Lake in Manitoba for shipment to the Flin Flon smelter and nickel-copper concentrates for shipment to its own smelter at Fort Saskatchewan, Alta. The company has built a mining plant and started shaft sinking at its copper-zinc deposit at Fox Lake, some 34 miles southwest of Lynn Lake.

Production in British Columbia at 52,900 tons worth \$47,450,000 was 24 p.c. higher than in 1965. Full production from the eight producing mines accounted for the increase. The Sunro mine of Cowichan Copper Co. Ltd. closed in September because of financial difficulties. Western Mines Limited completed initial mine development and construction of its plant and 750-ton-a-day mill at the south end of Butte Lake on Vancouver Island; production will start in 1967. At Babine Lake northeast of Smithers, The Granby Mining Company Limited completed construction of a 5,000-ton-a-day mill preparation of its Granisle orebody for open-pit mining. Granduc Mines Limited continued driving the access tunnel from Tide Lake, north of Stewart, to its orebody on the Unuk River; production is scheduled for 1969.

In Yukon Territory, New Imperial Mines Limited was building a 2,000-ton-a-day mill and was preparing the Little Chief orebody for open-pit mining in 1967; concentrates will be exported to Japan.

9.—Producers' Shipments of Copper, by Province, and Total Value 1957-66

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Year	New-foundland	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba

Iron Ore.*—Iron ore shipments in 1966 amounted to 36,331,000 long tons, an all-time high, valued at \$431,659,000. Newfoundland-Labrador was the largest producing province with output of 14,773,000 long tons, followed by Quebec with 12,365,000, Ontario with 7,272,000 and British Columbia with 1,921,000. Seventeen companies were directly engaged in iron ore mining—one on the Island of Newfoundland, one in Labrador, one with mines in both Labrador and Quebec, two in Quebec, six in Ontario and six in British Columbia. In addition, four companies shipped iron ore as a by-product of base metal operations.

In Newfoundland, Dosco Industries Limited closed its Bell Island mine on June 30 after 72 years of continuous operation; shipments from the mine since 1892 totalled 78,989,412 tons. The Iron Ore Company of Canada with operations in both Labrador and Quebec commenced an expansion program to increase production at its Labrador City concentrator from 7,000,000 to 10,000,000 long tons annually and its pellet-producing capacity at Sept Îles, Que., from 5,500,000 to 10,000,000 tons annually. Wabush Mines, which operates mines in Labrador, commenced the expansion of its concentrator capacity at Wabush from 5,300,000 tons to 6,000,000 tons annually and of its pellet plant at Pointe Noire, Que., to the same capacity. In Ontario, Algoma Steel Corporation Limited and Steep Rock Iron Mines Limited combined to begin construction of a 1,350,000-ton-a-year pellet plant. In British Columbia, a labour strike closed operations at Brynnor Mines Limited from July until the year-end. Orecan Mines Ltd. suspended operations in September.

Iron Ore Company of Canada, with direct-shipping ore from deposits on both sides of the Labrador-Quebec border at Schefferville and a concentrating-grade deposit near Labrador City, is the largest shipper of iron ore in Canada, accounting for 36 p.c. of the 1966 shipments. Quebec Cartier Mining Company accounted for 19 p.c. and other shippers were Wabush Mines in Labrador; Hilton Mines, Ltd., in Quebec; and Algoma Ore Properties Division of Algoma Steel Corporation, Steep Rock Iron Mines Ltd., Calanc Ore Company Ltd., National Steel Corporation of Canada (formerly Lowphos), Marmoraton Mining Company, and Adams Mine (Jones & Laughlin Steel Corporation) in Ontario. In British Columbia six companies shipped iron ore—Zeballos Iron Mines Limited, Texada Mines Limited, Brynnor Mines Limited, Jedway Iron Ore Limited, Empire Development Company Limited, and Orecan Mines Ltd. By-product iron ore producers were Cominco Limited, International Nickel, Falconbridge Nickel and Coast Copper Co. Ltd.

Pellet shipments in 1966 amounted to 12,300,000 tons, an increase of 12 p.c. over 1965. Shipments were made by Carol Pellet Company in Labrador; Arnaud Pellets and Hilton Mines in Quebec; Adams Mine, National Steel Corporation of Canada, Marmoraton Mining Co., Ltd., and International Nickel in Ontario.

Annual iron ore productive capacity in Canada at the end of 1966 was 46,000,000 tons, which included 15,600,000 tons of pellets. On completion of planned iron ore pellet plants, productive capacity will be 23,700,000 tons a year in 1968. In British Columbia Wesfrob Mines Ltd. continued to prepare, for production in mid-1967, a plant capable of producing more than 1,000,000 tons of iron ore concentrates a year; 40 p.c. of the concentrate will be sinter feed and the remainder pellet feed. In Ontario, the Griffith Mine on the west shore of Bruce Lake and the Sherman Mine five miles from Temagami continued preparations for production in 1968. The Griffith Mine is owned by the Steel Company of Canada Ltd. and will produce 1,500,000 tons of pellets a year; the Sherman Mine is 90 p.c. owned by Dominion Foundries and Steel Limited and will have a capacity of 1,200,000 tons of pellets a year.

Canadian iron ore is consumed by steel industries in five main market areas—Canada, the United States, Britain, Japan and Western Europe. Shipments to domestic steel plants, to the United States and to Western Europe were higher in 1966 than in the previous year but those to Japan and Britain were lower. The United States is the world's largest

* All quantities of iron ore and concentrates given in the text are in long tons of 2,240 lb.; quantities in Table are in short tons of 2,000 lb.

iron ore importer and is Canada's largest market, accounting for 66 p.c. of total Canadian shipments and nearly 80 p.c. of exports in 1966. The decline in shipments to Britain from 2,900,000 tons in 1965 to 2,200,000 tons in 1966 was mainly the result of intensive competition from West African ores. Total Canadian exports in 1966 were 30,700,000 tons compared with 30,800,000 tons in 1965. Canadian consumption, at 9,800,000 tons, was up only slightly from 1965 and imports, at 4,300,000 tons, were down 9 p.c. Most imported ore came from Michigan and Minnesota in the United States; 328,000 tons came from Brazil.

10.—Iron Ore Shipments and Production of Pig Iron and Steel Ingots and Castings, 1957-66

Nickel.—Canadian nickel production in 1966 was 223,600 tons valued at \$377,479,000, a decrease in volume of close to 14 p.c. and in value of 12.3 p.c. from 1965. Reduced production resulted from labour strikes at Sudbury and a lack of skilled workers. Canada supplied about 70 p.c. of the non-communist world's nickel in 1966.

In Ontario, International Nickel operated ten mines and two smelters near Sudbury, a refinery at Port Colborne, and was developing five mines in the Sudbury area. Also near Sudbury, Falconbridge operated six mines and a smelter and was developing two mines. In Manitoba, International Nickel operated an integrated nickel mining-concentrating-smelting-refining facility at Thompson and was developing three new mines. Sherritt Gordon's Lynn Lake mine continued to produce nickel concentrates for treatment at the company's chemical refinery at Fort Saskatchewan in Alberta. Nickel matte was imported by Sherritt to supplement the Lynn Lake concentrates. In Quebec, Marbridge Mines Limited, in La Motte Township, produced a bulk nickel-copper concentrate for treatment at Falconbridge's smelter. Lorraine Mining Company Limited, near Belleterre, shipped nickel concentrates to International Nickel for smelting. In northwestern Ontario, the Werner Lake mine of Metal Mines Limited produced a bulk nickel-copper concentrate that was shipped to International Nickel at Sudbury for smelting. Giant Mascot Mines Limited, near Hope, B.C., produced nickel-copper concentrates for export to Japan.

Nickel prices were raised on Nov. 1, 1966 from 84 cents (Cdn.) a pound to 92.15 cents (Cdn.) a pound in Canada, and from 77.75 cents (U.S.) a pound to 85.25 cents (U.S.) a pound in the United States. The suspension of the duty of 1½ cents a pound on nickel entering the United States remained in force in 1966. Both prices are f.o.b. Port Colborne, Ont.

¹ Includes 15 tons of producers' shipments in Saskatchewan.

Lead and Zinc.—Production of lead in 1966 totalled 299,600 tons, about 3 p.c. more than in 1965. Refinery production at Trail, B.C., was 184,900 tons, 1,600 tons less than in 1965. Late in 1966 the lead-zinc smelter of East Coast Smelting and Chemical Company Limited, a subsidiary of Brunswick Mining and Smelting Corporation Limited, began operations at Belledune Point, N.B., and became Canada's second primary lead producer; the plant has an annual capacity of 48,000 tons of lead metal. Exports of lead in ores and concentrates totalled 112,900 tons of contained lead, compared with 107,000 tons in 1965, and went mainly to the United States and Belgium with lesser amounts to Japan, West Germany and Britain. Exports of refined lead amounted to 106,500 tons, 22,600 tons less than in the previous year. The lead price, f.o.b. Toronto and Montreal, was 15.5 cents a pound from the beginning of 1966 until May 5, 15.0 cents until Oct. 11, and 14.0 cents for the remainder of the year.

Zinc production reached a record 964,100 tons in 1966, 142,100 tons more than in 1965. Refined zinc output rose from 358,500 tons in 1965 to 382,600 tons in 1966. Canadian Electrolytic Zinc Limited expanded capacity of its Valleyfield, Que., plant from 84,000 to 140,000 tons annually. Late in 1966, East Coast Smelting and Chemical Company Limited (see paragraph above) became Canada's fourth primary zinc producer. Exports of zinc in ores and concentrates, totalling 591,300 tons, went mainly to the United States, Belgium, the Netherlands and Japan. Refined exports amounted to 256,200 tons and went mainly to the United States and Britain. The zinc price remained unchanged throughout 1966 at 14.5 cents a pound.

Production of lead and zinc in the Northwest Territories in 1966 rose substantially, to 105,300 tons and 189,200 tons, respectively, as a result of the first full year of production of the 5,000-ton-a-day concentrator at Pine Point on the south shore of Great Slave Lake. Lead and zinc concentrates were produced in the Yukon Territory by United Keno Hill Mines Limited, which operates mines in the Mayo district, 200 miles north of Whitehorse, Y.T.

British Columbia's production was mainly from the southeastern part of the province, most of it being accounted for by Cominco Ltd., which operates the Sullivan mine at Kimberley and the Bluebell mine at Riondel; operations at its H.B. mine at Salmo were suspended on Nov. 1, 1966. Daily lead-zinc ore production at the Sullivan and Bluebell

mines was 10,000 and 700 tons, respectively. Other producers in this part of the province included Canadian Exploration, Limited at Salmo, Reeves MacDonald Mines Limited at Remac, Aetna Investment Corporation Limited at Toby Creek, and Giant Soo Mines Limited near Wasa, which began operations in late 1966. Also in late 1966, production began at the zinc-copper-lead mine of Western Mines Limited on Vancouver Island. British Columbia's only producer of copper-zinc ore was the Britannia mine of the Anaconda Company (Canada) Ltd. There are a number of smaller lead-zinc producers in British Columbia; Cominco Ltd. treats ores and concentrates from most of these properties and some from the Yukon Territory at its Trail smelters.

Lead and zinc were recovered by Hudson Bay Mining and Smelting Co., Limited from copper-zinc-lead ores of its Flin Flon mine on the Saskatchewan-Manitoba border and from the Schist Lake mine near Flin Flon and the Chisel Lake and Stall Lake mines 90 miles east of Flin Flon.

In Ontario, Noranda Mines Limited (Geco Division), Willecho Mines Limited, and Wilroy Mines Limited, all at Manitowadge, produced zinc, lead and copper concentrates; Kam-Kotia Porcupine Mines Limited near Timmins produced copper concentrates and a small tonnage of zinc concentrates. Three new mines were opened in 1966—the Zenmac near Schreiber, the Canadian Jamieson at Timmins, and the Texas Gulf near Timmins. When operating at full capacity Texas Gulf will be one of the largest mine producers of zinc in Canada. Zinc concentrates from Ontario and Quebec mines were roasted by Sherbrooke Metallurgical Company Limited at Port Maitland on Lake Erie and the resulting calcine was shipped to the United States for final treatment.

Quebec's 1966 lead production dropped somewhat below that of 1965 but its zinc mine output at 293,100 tons was about 7 p.c. higher. The New Hosco mine, which had been producing copper concentrates since 1963, commenced production of zinc concentrates in August 1966 and a new producer, Mines de Poirier, Inc., a subsidiary of Rio Algom Mines Limited, opened a 1,500-ton mill to treat ore from its copper-zinc mine in Poirier township, expanding capacity during the year to 2,500 tons daily to provide for processing copper ore from nearby Joutel Copper Mines Limited. Other mine producers in Quebec were the Normetal (copper-zinc), Quemont (copper-zinc), Manitou-Barvue (copper-zinc-lead), and Lake Dufault (copper-zinc), all in the Noranda-Val d'Or area; New Calumet (zinc-lead) at Calumet Island on the Ottawa River; Coniagas (zinc-lead-silver) at Bachelor Lake; and Cupra (copper-zinc-lead) and Solbec (copper-zinc-lead), both in the Sherbrooke district.

New Brunswick's production of lead and zinc was up about 19 p.c. and 15 p.c., respectively, compared with 1965. In 1966, Brunswick Mining and Smelting Corporation Limited brought into production its No. 6 zinc-lead-copper mine near Bathurst, its ore being milled at a newly constructed 2,250-ton-a-day concentrator. Heath Steele Mines Limited, near Newcastle, produced zinc, copper and lead concentrates and started an expansion program to double ore production by 1968. Magnet Cove Barium Corporation, at Walton, remained Nova Scotia's only lead-zinc producer. In Newfoundland, production continued at the zinc-lead-copper mine of American Smelting and Refining Company at Buchans and zinc concentrates were recovered from the copper-zinc ore produced by Consolidated Rambler Mines Limited near Baie Verte.

Exploration and development were carried out in many areas during 1966, notably at Pine Point in the Northwest Territories and Ross River in the Yukon Territory. New mines were under development near Bathurst, N.B., in the Joutel-Poirier district 60 miles north of Amos, Que., in northern Manitoba, in northern Saskatchewan and in southeastern British Columbia.

Gold.—Canadian gold production in 1966 amounted to 3,319,000 oz.t. valued at \$125,177,000, a decline of 8.0 p.c. from 1965. The average price for gold paid by the Royal Canadian Mint in 1966 was \$37.71 per oz.t. (Cdn.), down from \$37.73 in the previous year. Since 1962, the range in value for the Canadian dollar has been set at \$0.916 to \$0.934 in relation to the U.S. dollar and the corresponding Royal Canadian Mint gold price between \$37.46 and \$38.22 per oz.t. Canadian lode and placer gold mines continue to experience serious economic difficulties with costs of recovery maintaining an upward trend. Of the 48 lode gold mines operating in Canada in 1966 there were only four that did not receive assistance under the terms of the Emergency Gold Mining Assistance Act. Six lode gold mines closed in 1966 and only one new mine commenced production. In addition, Canada's largest placer gold mine ceased operations at the end of the 1966 season.

Gold produced from lode gold mines, from base metal ores and from placer mines dropped by 9.0 p.c., 3.7 p.c. and 10 p.c., respectively, below 1965 levels. The proportion of gold derived from lode gold mines declined to 81.2 p.c. of the total output, down from 82.1 p.c. in 1965, while that from base metal ores and placer mines contributed 17.6 p.c. and 1.3 p.c., respectively, compared with 16.7 p.c. and 1.2 p.c. in 1965. Ontario remained the principal producing province, accounting for 50.0 p.c. of the total compared with 54.0 p.c. in 1965; Quebec's share increased to 28.2 p.c. from 25.1 p.c. and the proportions from the Northwest Territories and British Columbia were relatively unchanged at 12.8 p.c. and 3.6 p.c., respectively.

In Ontario, production declined 14.7 p.c. to 1,661,000 oz.t. from 1,946,000 oz.t. in 1965; 25 lode gold mines operated during the year compared with 31 in 1965. In addition, Lake Shore Mines, Limited continued to operate its mill at Kirkland Lake on the re-treatment of old tailings and Upper Beaver Mines Limited had increased gold output from its gold-copper mine in the same area. Four mines ceased operations in 1966: McKenzie Red Lake Gold Mines Limited at Red Lake, Pickle Crow Gold Mines Limited at Pickle Crow, Porcupine Paymaster Limited near Timmins and Stairs Exploration and Mining Company Limited, a small operation near Matachewan. Gold recovered as a by-product from base metal ores was about 3.7 p.c. of the provincial total.

Quebec production increased 3.3 p.c. to 935,500 oz.t. from 905,400 oz.t. in 1965. Lode gold output increased by 13.2 p.c. mainly due to Camflo Mines Limited near Malartic and Wasamac Mines Limited at Arntfield, both of which completed their first full year of production, and to Chimo Gold Mines Limited, a new producer in Vauquelin Township. Twelve gold mines operated in 1966 although two of these—Norlartic Mines Limited near Malartic and Peel-Elder Limited near Noranda—closed during the year. Gold recovered as a by-product from base metal ores represented about 37.4 p.c. of the provincial total compared with nearly 42 p.c. in 1965.

In the Northwest Territories estimated production all from lode gold mines was 124,000 oz.t. compared with 452,500 oz.t. in 1965. The decline of 6.3 p.c. was mainly due to a drop of about 10 p.c. in output by Giant Yellowknife Mines Limited, Canada's largest lode gold mine.

British Columbia production in 1966 moved up to 120,700 oz.t. from 117,800 oz.t. in 1965. Output from the larger of British Columbia's two lode gold mines—Bralorne Pioneer Mines Limited—declined about 20 p.c. but that from The Cariboo Gold Quartz Mining Company Limited improved by nearly 10 p.c. The reduction in lode gold output was offset by an increase of about 23 p.c. in gold recovered from base metal ores.

Combined production for Manitoba and Saskatchewan was 5.8 p.c. lower at 107,200 oz.t. compared with 113,900 oz.t. in 1965. Most of it is derived from base metal ores. Production declined at San Antonio Gold Mines Limited, the only lode gold mine in the Prairie Provinces.

In the Yukon Territory, where placer operations account for almost all of the gold production, output was 43,500 oz.t. compared with 45,000 oz.t. in 1965. Placer gold production in future years will be greatly reduced with the termination of operations near

Dawson at the end of the 1966 season by the Yukon Consolidated Gold Corporation Limited. This operator previously produced 75 p.c. to 80 p.c. of the Territory's annual placer gold. The LaForma mine of Discovery Mines Limited near Carmacks, which was the only lode gold mine in the territory, ceased operations in March 1966.

In Newfoundland and New Brunswick, all gold was recovered as a by-product of base metal production.

14.—Producers' Shipments of Gold, by Province, and Total Value, 1957-66

Uranium.—The uranium industry is on the threshold of a new period of development based on the rapidly expanding demand for long-term supplies of nuclear fuel for the generation of electricity by the world's industrial nations. The large requirement for uranium is expected to be in the period approaching 1980 but, because of the time it takes to develop mines of up to 10 years, the industry is gaining momentum at the present time particularly in exploration. The uranium demand in non-communist countries is expected to be about 65,000 tons a year in the 1980s, much higher than the 19,000 tons produced by all countries in 1966. Half of this went to government stockpiles, which is not part of the normal demand growth for nuclear generation of electricity.

Canadian Government policy with respect to the export of uranium is that Canadian uranium must be used for peaceful purposes and agreements to this effect must be negotiated between Canada and the purchasing country before export permits are granted. Sales of small quantities of uranium, up to a maximum of 2,500 pounds in total for a country, may be made to nations not holding agreements. The Atomic Energy Board, with the cooperation of the Department of Trade and Commerce and the Department of National Revenue, controls the export and import of uranium and special equipment related to the uranium and atomic energy industries.

The year 1966 was significant for the industry because the first large contracts for the sale of uranium for peaceful purposes were consummated. Rio Algom Mines Limited negotiated a contract with the United Kingdom Atomic Energy Authority for a minimum of 8,000 tons of U_3O_8 with an option to increase the amount to 11,500 tons. Deliveries are to begin in late 1971 and to continue at a rate of 1,000 tons annually. In December, Ontario Hydro completed negotiations with Rio Algom and Eldorado Mining and Refining Limited for the purchase of 6,500 tons of uranium, deliveries to begin in 1970. Rio Algom will supply more than 90 p.c. of the requirement and Eldorado the remainder of the contract as well as refining services. Canadian uranium producers expect to negotiate other long-term contracts. Delegations from West Germany, Japan and Mexico visited Canada during 1966 relative to uranium. Of significance is an agreement between Denison Mines Limited and Mitsui and Company Ltd., a major Japanese trading company, whereby Mitsui will purchase uranium only from Denison for sales to the Japanese industry and Denison will sell uranium to Japan only through Mitsui.

Production in 1966 totalled 3,900 tons of U_3O_8 . Final deliveries were made at the end of 1966 to the United States under the contracts that had been negotiated in the 1950s. Total shipments involving these contracts were valued at over \$1,500,000,000. At the end of the year, about 5,700 tons of U_3O_8 remained to be delivered to the United Kingdom Atomic Energy Authority. This contract is not expected to be completed until 1971.

At the end of 1965, Canada's reserves of uranium were about 210,000 tons of U_3O_8 recoverable at less than \$10 a pound. These are more than adequate to meet the firm contracts and the capacity of present plants for the foreseeable future. However, if the large future demand for Canadian uranium is to be met, new reserves will be required. In 1966, the industry was marked by a movement of mining concerns into uranium ventures. Much of the activity consisted of land acquisition but several companies began intensive exploration programs. The most promising new area is at Agnew Lake, Ont., about 45 miles east of Elliot Lake, where Kerr Addison Mines Limited continued a diamond drilling program. Results were encouraging and several other companies are interested in the region.

Silver.—Canada's mine production of silver in 1966 was 33,418,000 oz.t., about 1,146,000 oz.t. more than in 1965; the 1966 production was valued at \$46,752,000, over \$1,570,000 higher than the previous year. Declines in output in the Yukon Territory, Manitoba and Saskatchewan were more than offset by increases in other provinces. Quebec had the largest increase because of increased by-product output at several base metal

mines. Output in the Northwest Territories reached a new high because of increased production by Echo Bay Mines Ltd. at its silver-copper property near Port Radium. Although Ontario was again the leading silver-producing province, its output dropped almost 5 p.c. from 1965 mainly because of lower output in the Cobalt-Gowganda area. Base metal ores were again the principal source of Canadian output, accounting for almost 83 p.c. of production. Approximately 16 p.c. came from silver-cobalt ores mined in northern Ontario and the remainder was by-product recovery from lode and placer gold ores. Reported consumption of silver in Canada in 1966 at 21,300,000 oz.t. was almost 9,000,000 oz.t. less than in 1965. Substantially reduced requirements for coinage accounted for most of the decrease. There was no change in the composition of the coins minted in 1966 but changes were contemplated for coins to be minted in 1967.

Canadian Copper Refiners Limited at Montreal East, Que., remained Canada's largest producer of refined silver. It recovered nearly 10,100,000 oz.t. from the treatment of anode and blister copper. The silver refinery of Cominco Ltd. at Trail, B.C., was the second largest producer, recovering 6,600,000 oz.t. in the processing of lead and zinc ores and concentrates. Other producers of refined silver, all in Ontario, were Kam-Kotia Porcupine Mines Limited (Refinery Division) at Cobalt (from silver-cobalt ores and concentrates); International Nickel at Copper Cliff (from nickel-copper concentrates); Royal Canadian Mint at Ottawa (from gold bullion); and Hollinger Consolidated Gold Mines, Limited at Timmins (from gold precipitates).

The two largest company sources of silver in Canada in 1966 were the Hector-Calumet, Elsa and Keno mines in the Yukon Territory, about 200 miles north of Whitehorse, operated by United Keno Hill Mines Limited, and the Sullivan lead-zinc-silver mine at Kimberley, B.C., operated by Cominco Ltd. United Keno produced concentrates and precipitates containing 4,235,678 oz.t. of silver and Cominco Ltd. produced concentrates containing 3,190,431 oz.t. Other important producers of silver included Echo Bay Mines Ltd. near Port Radium, N.W.T.; Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man.; Noranda Mines Limited (Geco Division) at Manitouwadge, Ont.; International Nickel at Copper Cliff, Ont.; Lake Dufault Mines, Limited near Noranda, Que.; Brunswick Mining and Smelting Corporation Limited near Bathurst, N.B.; and American Smelting and Refining Company (Buchans unit) in Newfoundland. Some 5,300,000 oz.t. of silver were derived from silver-cobalt ores mined in the Cobalt-Gowganda area of northern Ontario, the largest producer being Silverfields Mining Corporation, Limited with an output of 1,521,000 oz.t.

16.—Producers' Shipments of Silver, by Province, and Total Value, 1957-66

NOTE.—Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

¹ Includes relatively small quantities produced in Alberta.

Platinum Metals.—Canadian production of the platinum metals in 1966 was 396,100 oz.t. valued at \$32,370,000, a reduction of 67,000 oz.t. and \$3,740,000 from 1965. The decrease in output resulted from lower production of nickel. Platinum group metals—platinum, palladium, rhodium, ruthenium, iridium and osmium—are recovered in Canada as a by-product in the refining of nickel; nickel ores contain an average of 0.025 oz.t. of platinum metals per ton. When nickel matte is electrolytically refined the platinoids are precipitated in the electrolytic tanks as a sludge. The sludge is purified and sent to refineries in Britain and the United States for recovery of the platinum metals.

Half of the world's output of platinum metals is from the Soviet Union and most of the remainder is produced in the Republic of South Africa and Canada. World demand remained strong in 1966 and consumption in the non-communist countries exceeded mine production. The deficit was made up by purchases from the Soviet Union and releases from the United States stockpile. An erratic pattern of sales to the non-communist world by the Soviet Union caused a wide difference between the official platinum price of \$100 per oz.t. and dealers' prices of up to \$146 per oz.t.

Aluminum.—Canada ranks third in world aluminum production, after the United States and the Soviet Union. In the non-communist world, 1966 production of primary aluminum was 6,200,000 tons; Canada produced 907,700 tons and exported 716,000 tons. These exports represent a large proportion of all aluminum metal moving across international borders. Two companies produce primary aluminum in Canada—Canadian British Aluminium Company Limited operates a smelter at Baie Comeau, Que., and Aluminum Company of Canada Limited (Alcan) operates smelters at Arvida, Alma, Shawinigan and Beauharnois in Quebec and at Kitimat in British Columbia. Effective capacity at Canadian smelters will be an estimated 1,085,000 tons by the end of 1967. As all bauxite and alumina used by the aluminum smelters must be imported, mainly from the Caribbean area, metal production is classed with manufactures and not with smelter production of ores and concentrates of domestic origin. The export price of primary aluminum was 24.5 cents a pound (U.S.) in 1966, unchanged since November 1964. The Canadian price was 26.0 cents a pound throughout 1966 but was increased to 26.5 cents in January 1967.

Magnesium.—Dominion Magnesium Limited, with mine and smelter at Haley, Ont., is the only producer in Canada. The smelter has an annual magnesium capacity of 11,500 tons. Production declined to 6,723 tons from 10,108 tons in 1965 because of a strike, and exports declined to \$3,450,000 from \$4,450,000. Imports increased from

1,600 tons in 1965 to 3,000 tons in 1966. Canadian consumption of primary magnesium, including imports, was 5,200 tons in 1966. World production is in the order of 176,000 tons a year.

Selenium and Tellurium.—Selenium production in 1966 at 575,500 pounds valued at \$2,791,000 was 12 p.c. higher than in 1965; tellurium output at 72,200 pounds valued at \$469,600 was 3.5 p.c. higher. These metals are recovered from the anode muds resulting from electrolytic refining of copper at the plants of Canadian Copper Refiners Limited at Montreal East, Que., and International Nickel at Copper Cliff, Ont.

Titanium.—Ilmenite, an iron-titanium oxide, is mined in the Allard Lake and St. Urbain areas of Quebec. Ilmenite mined by Quebec Iron and Titanium Corporation (QIT) in the Allard Lake area is smelted by QIT in electric-arc furnaces at Sorel, Que., to produce high-titania slag and a range of specialty pig irons. The titania slag is sold to producers of titanium-based pigments in Canada, the United States, Britain and other countries. Production of titania slag was reduced by a strike in 1966, the value being \$20,505,000 compared with the record \$22,425,000 in 1965.

Atlas Titanium, a Division of Rio Algom Mines Limited, Welland, Ont., continued to carry out second-stage melting of imported titanium ingots and increased, by 30 p.c. from 1965, its processing of the metal. Atlas makes mill products and finished electroplating baskets for sale in domestic and export markets.

Vanadium.—Vanadium is recovered in Canada from imported Venezuelan crude oil in the form of vanadium pentoxide (V_2O_5) by Canadian Petrofina Limited at its refinery near Pointe-aux-Trembles, Que. The capacity of the plant is about 1,000 pounds of V_2O_5 a day. Great Canadian Oil Sands Limited will start oil recovery from the Athabasca tar sands near Fort McMurray in northern Alberta in September 1967. The operation will produce petroleum coke, some of the ash from which is reported to contain about 4 p.c. vanadium. The recovery of this vanadium is planned.

Cobalt.—Cobalt production in 1966 was 3,511,000 pounds valued at \$7,108,000 compared with 3,648,000 pounds valued at \$7,529,000 in 1965. Cobalt is recovered as a by-product of the smelting and refining of nickel-copper ores of Sudbury, Ont., from nickel ores of Thompson, Man., and from silver ores of Cobalt, Ont. International Nickel recovers cobalt from its refinery operations at Port Colborne, Ont., Thompson, Man. and Clydach, Wales. Falconbridge Nickel produces electrolytic cobalt from the refining of nickel-copper matte shipped to its refinery at Kristiansand, Norway. Sherritt Gordon recovers by-product cobalt at its nickel refinery at Fort Saskatchewan, Alta. Cobalt Refinery Division of Kam-Kotia Mines Limited produces cobalt oxide and speiss as by-products of smelting and refining complex silver-cobalt concentrates from mines in the Cobalt-Gowganda area of Ontario.

Columbium.—Columbium production of St. Lawrence Columbium and Meta Corporation, the only Canadian producer, was 2,638,000 pounds of columbium pentoxide (Cb_2O_5) in pyrochlore concentrates valued at \$3,182,000. The mine is near the town of Oka, 20 miles west of Montreal. Quebec Columbium Limited and Columbium Minor Products Limited also own large pyrochlore deposits in the Oka area. Masterloy Products Limited, near Ottawa, is the only Canadian manufacturer of ferrocolumbium, which is sold in Canada and the United States. Consolidated Morrison Exploration Limited and associated companies hold exploration concessions in the James Bay Lowlands area of Ontario, south of Moosonee, on which large tonnages of columbium-bearing material have been discovered. Early estimates indicated 40,000 tons or more per vertical foot averaging 0.52 p.c. columbium pentoxide.

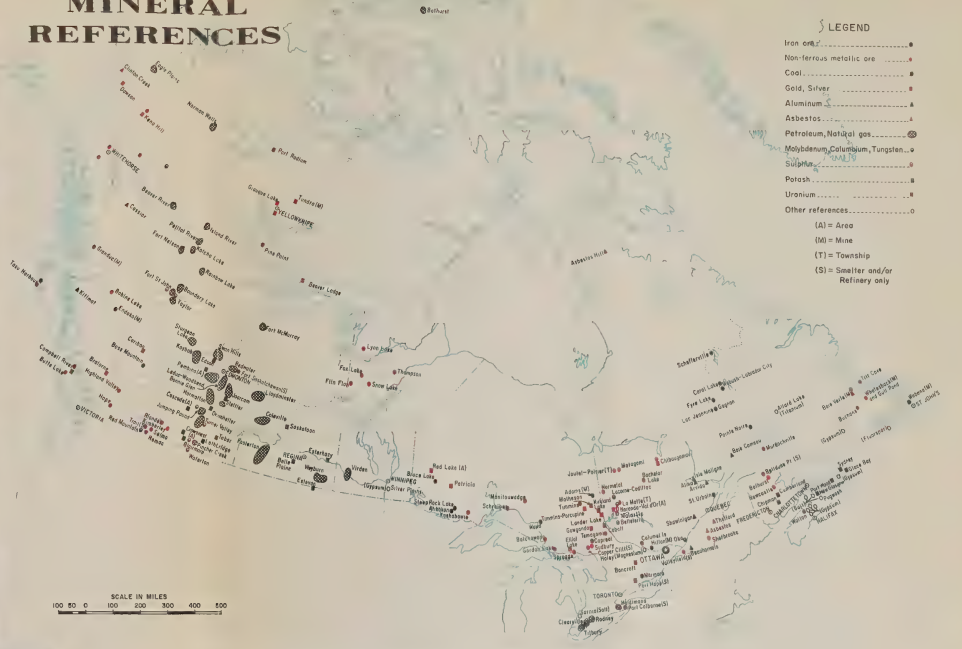

Putting the final touches to the furnaces in a new iron ore pelletizing plant at Attikokan, west of Port Arthur, Ont. Following the large expansion programs that have taken place in iron ore production in recent years, there is now emerging a trend toward further pelletization of existing output, sharply increasing the pellet-to-ore ratio.

The 5,000-ton-a-day lead-zinc concentrator at Pine Point on the south shore of Great Slave Lake, N.W.T. The mill, which had its first full year of production in 1966, is already being expanded to a capacity of 8,000 tons a day.

MINERAL REFERENCES

Canada's potash industry in southern Saskatchewan continues to grow rapidly. Annual capacity of the four mines operating in 1967 was 4,900,000 tons and, with the completion of six additional mines now under construction, Canada will become, in the early 1970s, the world's largest producer of this mineral.

The tar sands processing plant at Fort McMurray in northeastern Alberta began operations in the fall of 1967, producing 45,000 bbl. of oil, 300 tons of elemental sulphur and 2,800 tons of coke daily from 110,000 tons of sand. Locked in the Athabasca tar sands is an estimated 600,000,000,000 bbl. of oil, an amount representing more than the combined reserves of all the oil fields in the world.

The Mining Research Centre of the Department of Energy, Mines and Resources concentrates particularly on rock mechanics. At the Elliot Lake laboratories, a borehole instrument is under development for use in studying stresses in rocks in areas being mined.

Molybdenum.—Production of molybdenum in Canada in 1966 increased for the seventh consecutive year and reached a high of 20,596,000 pounds valued at \$34,671,000 compared with 9,557,000 pounds valued at \$16,731,000 in 1965. Canada's position in 1966 was second only to the United States among world producers.

Canadian production in 1966 came from eight mines, four in British Columbia and four in Quebec. The producers in British Columbia, accounting for 80 p.c. of the total Canadian output, were Endako Mines Ltd. at Endako; Brynnor Mines Limited (Boss Mountain Division), a subsidiary of Noranda Mines Limited; Red Mountain Mines Limited near Rossland; and Bethlehem Copper Corporation in the Highland Valley. The producers in Quebec were Molybdenite Corporation of Canada Limited at Lacorne; Preissac Molybdenite Mines Limited and Anglo-American Molybdenite Mining Corporation, both in Preissac Township north of Cadillac; and Gaspé Copper Mines Limited, a subsidiary of Noranda Mines, at Murdochville. Red Mountain Mines came into production in mid-1966. British Columbia Molybdenum Limited, a subsidiary of Kennecott Copper Corporation, was scheduled for operation in October of 1967, thereby bringing the number of domestic producers to nine with seven of them producing molybdenum as a primary product and two—Bethlehem and Gaspé—recovering molybdenum as a by-product of copper operations.

Endako Mines in late 1966 was milling over 16,000 tons of ore a day grading about 0.24 p.c. MoS_2 ; expanded facilities will bring its concentrator capacity to 22,000 tons a day by early 1968. The company expects to maintain a minimum production of 12,000,000 pounds of molybdenum a year.

Subsection 2.—Industrial Minerals

The total value of industrial minerals produced in Canada in 1966 was a record \$837,497,000. Producers' shipments of non-metallic minerals were valued at \$363,388,000, and of clay products and other structural materials of mineral origin, at \$474,109,000. New production records were established for asbestos, barite, nepheline syenite, potash, sulphur, cement, stone, and sand and gravel; however, production of several minerals, notably gypsum, lime, salt, silica and sodium sulphate, was slightly below 1965 levels. Developments in a number of industrial minerals during 1966 are reviewed below.

Asbestos.—Asbestos production continued its generally upward trend in 1966 when output reached a new high at 1,489,000 tons valued at \$163,655,000, an increase of 7.3 p.c. in output and 11.9 p.c. in value over 1965. Quebec annually accounts for about 90 p.c. of the domestic production and British Columbia, Newfoundland and Ontario for the remainder. Most of the Canadian production is exported, mainly as milled fibre and shorts, to the United States, West Germany, Britain, Japan and other non-communist countries. Canada now provides about 40 p.c. of the world's production of asbestos fibre.

Favourable world demand for fibre has resulted in increased exploration, development and expansion of facilities both in Canada and elsewhere. Projected production at the \$21,000,000 Clinton Creek property of Cassiar Asbestos Corporation in the Yukon Territory, beginning in 1968 at 60,000 tons of fibre per annum, is expected to increase to 80,000 tons by 1970; asbestos-cement grades of fibre will be the main product. Canadian Johns-Manville Co. Ltd. plans to bring into production in 1968 its deposit in Reeves Township, 40 miles southwest of Timmins, Ont., which will have a capacity of 25,000 tons of fibre a year. Production in Ontario during 1966 was derived from Hedman Mines Ltd. near Matheson, where a pilot plant was in operation providing fibre for appraisal and market development. Asbestos Corporation Ltd., in April 1967, announced the suspension of development work at Asbestos Hill in the Ungava area of northern Quebec because of a large increase in costs from the original estimate of \$66,300,000 to the present estimate of \$84,800,000. This deposit, located 40 miles south of Deception Bay, has reserves in excess of 20,000,000 tons.

17.—Quantity and Value of Producers' Shipments of Asbestos, 1957-66

NOTE.—Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

Potash.—Potash mining is a recent development in Canada, the first output being recorded in 1962, valued at \$3,000,000. Activity in this industry, which is concentrated in Saskatchewan, has since continued at a high tempo. In 1966, production—from two shaft mines at Esterhazy and Saskatoon and from one solution mine at Belle Plaine—totalled 1,990,000 tons (K_2O), 37 p.c. more than that of 1965. The bulk of this output was exported to world markets. Production will be greatly increased when the several new mines and plants now under construction come on stream. At the close of 1966, ten shafts and six refineries were under construction, which when completed will raise productive capacity from its current level of 3,400,000 tons of product (KCl concentrate) per year to an estimated 12,000,000 tons per year. Other shafts and plants, as yet unannounced, are expected to further increase productive capacity by 1970.

World potash consumption has increased substantially during the past five years and the urgent need for fertilizer materials to increase world food supplies assures continued strong growth over the long term. However, during the next few years, potash production may exceed actual consumption as many new operations, mainly in Canada, reach production. The scale of potash operations in Canada and in the Soviet Union will be much larger than the facilities operating in the older potash-producing areas and this, together with higher quality ores, should result in low unit production costs. Over the long term, the advantages of new technology, large-scale operations, and lower-cost transportation on land and sea will place Canada in a strong competitive position for world markets and, at the same time, offer hope of relatively stable and low potash prices—the most important factor in encouraging the wider use of this commodity.

Salt.—Production of salt during 1966, at 4,492,000 tons, was maintained near the record level established the previous year. Rock salt is mined in Nova Scotia and Ontario; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta. Ontario, with two rock salt mines and with advantageous facilities for export of both rock salt and brine, accounts for 84 p.c. of total output. Technical advances continue toward upgrading the purity of various salt products as salt remains a prime chemical raw material with many uses essential to industrial development. It is of interest to note that salt is also a by-product of the potash operations in Saskatchewan, more than one ton of salt being produced for every ton of refined potash. By 1970, when potash production is expected to approach 12,000,000 tons of product (KCl) annually, the rate of production of by-product salt will probably exceed 18,000,000 tons. However, major markets for this material are lacking; although research into utilization in road and soil stabilization programs is under way and small quantities are used for ice control during winter months, large tonnages will continue to accumulate at increasing rates as new potash mines are developed and brought into production.

18.—Producers' Shipments of Salt, by Province, and Total Value, 1957-66

Sulphur.—World demand for sulphur continued at a high level in 1966. Consumption, estimated at 32,000,000 tons, exceeded production by perhaps 1,000,000 to 1,500,000 tons, the deficit being supplied from stockpiles. This heavy rate of consumption, estimated to be increasing at the rate of 6 p.c. annually, is largely attributable to the rapid expansion of the fertilizer industry which uses vast amounts of sulphur, as sulphuric acid, in the production of phosphate fertilizer. Other consuming industries—steel, paper, plastics, paints and rubber—have contributed to the rising demand.

Canada's sulphur shipments to world markets in 1966 have been estimated at 2,800,000 tons, contrasted with a production of only 2,700,000. The continued heavy demand for sulphur, attractive prices, and the depletion of stockpiles have acted as strong stimuli for the expansion of existing facilities and the construction of new plants. In Alberta, several expansions at sour gas co-product sulphur plants were announced or under way during the year. By the year-end, Canadian Superior Oil had started operations at a 325,000-ton-per-year plant at Harmattan; Petrogas Processing Ltd. was expanding its plant near Calgary to provide an additional 400,000 tons capacity; Pan American Petroleum was building a plant near East Crossfield with an announced annual capacity of 600,000 tons; Shell Canada was increasing the capacity of its Jumping Pound plant by 150,000 tons; and in 1967, Great Canadian Oil-Sands Ltd. was to begin extracting co-product sulphur from Athabasca oil sands in northern Alberta where annual output is expected to reach 100,000 tons. Expansions of other than sour gas sulphur facilities were taking place elsewhere in Canada. Canadian Industries Limited was expanding sulphuric acid facilities at Sudbury and will consume greater quantities of International Nickel's smelter gas; Brunswick Mining and Smelting was recovering smelter gas for sulphuric acid production at Belledune, N.B., and plans to utilize by-product pyrite for the production of elemental sulphur, sulphuric acid and iron; Hudson Bay Mining and Smelting will ship pyrite to Regina for iron ore and sulphuric acid production; and the smelter gas and/or pyrite from Texas Gulf Sulphur's Kidd Creek base metal mine in northern Ontario will be utilized for the sulphur content. These projects are expected to be completed and on stream by the end of 1968. With their completion, Canada's total annual productive capacity of sulphur and equivalent sulphur will be well in excess of 4,000,000 tons.

² Includes sulphur in acid made from roasting. * Excludes pyrite and pyrrhotite used to produce

Gypsum.—Crude gypsum output in Canada reached an all-time high in 1964 when it amounted to 6,361,000 tons valued at \$11,524,000. In 1965 production declined to 6,306,000 tons and in 1966 to 5,976,000 tons, largely as a result of a cutback in building construction in Canada and, particularly, in the United States. Construction in the United States has a comparatively greater effect on gypsum production in Canada because 75 p.c. of Canada's production is exported to that country, principally from quarries in Nova Scotia. Nova Scotia annually accounts for 75 p.c. to 80 p.c. of the total production, the other producing provinces being Ontario, Newfoundland, British Columbia, Manitoba and New Brunswick.

A development of interest during the year was the decision of British American Construction and Materials Limited, a Winnipeg firm, to enter the gypsum products field. This company has under construction a fully automated gypsum wallboard plant in Saskatchewan and is developing a mine near Amaranth in Manitoba as a source of crude gypsum. A 15-degree incline shaft is being sunk to the gypsum which is 125 feet below surface in this area. The mine, to be operated on a room-and-pillar system, will have an initial capacity of 400 tons per shift.

Sodium Sulphate.—Production of sodium sulphate (salt cake) in Canada increased more than 59,800 tons in 1966 to establish a new high of 405,300 tons, all derived from alkali lake deposits in the southern part of Saskatchewan. Steadily rising demand for kraft pulp, the major use for sodium sulphate, has stimulated expansion of productive facilities in Saskatchewan. At the end of 1966, two new plants were under construction for operation in 1967—one at Fox Valley to be operated by the Sodium Sulphate Division of Saskatchewan Minerals, which will have a capacity of 150,000 tons a year, and the other at Alsask to be operated by Sodium Sulphate (Saskatchewan) Ltd., having a capacity of 50,000 tons a year. A third plant having a capacity of 100,000 tons, to be operated by Tombill Mines Ltd., was planned for construction during 1967 at Cabri, 40 miles north of Swift Current.

Silica.—The production of silica (quartz) in 1966, at 2,300,000 tons, was 6 p.c. lower than in 1965 but the output value, at \$5,514,000, was 8 p.c. higher as a result of increased output of higher-value silica sand. Metallurgy flux accounts for 70 p.c. of the total production of silica; the remainder consists of lump silica for use in silicon and ferro-silicon manufacture and in the production of elemental phosphorus (15 p.c.), and silica sand for glass manufacture, silicon carbide production, foundry use and for other purposes (15 p.c.).

Interest in silica, in particular silica sand, continued at a high level during 1966. Several companies were actively investigating the feasibility of producing sand from silica deposits in Quebec and Ontario. Canada's two producers of silica sand—Industrial Minerals of Canada Limited, operating a sandstone deposit at St. Canut des Deux Montagnes and a friable quartzite deposit at St. Donat de Montcalm in Quebec, and The Winnipeg Supply and Fuel Company, Limited, operating a loosely bonded sandstone deposit on Black Island in Lake Winnipeg—together supply about one third of the domestic market for silica sand. The remainder is supplied by imports from the United States, chiefly into Ontario, Quebec and British Columbia, for use by the glass industries and also for use in steel and iron foundries, in artificial abrasives manufacture, for silicate chemicals and for other purposes. Current consumption of silica sand in Canada is in the order of 1,000,000 tons a year.

Structural Materials

Total construction in Canada in 1966 was valued at a record \$11,200,000,000, an increase of more than 13.5 p.c. over 1965. The estimated value of the 1966 production of structural materials (non-metallic mineral) was \$474,109,000 which represents nearly 12 p.c. of the total value of mineral production for that year.

In addition to normal growth of construction work, 1966 was a year of considerable construction activity in preparation for Canada's Centennial celebrations. To support the expanding building activities, construction materials were required in far greater quantities than ever before. Expo 67 with its numerous structures, road development in the Montreal area, new bridges, viaducts and tunnels, all required increased amounts of construction materials, particularly concrete. Of importance also was the development of the Trans-Canada Highway system with its Louis Hippolyte Lafontaine tunnel under the St. Lawrence River at Montreal; completion of the 200-ft.-high Manicouagan-5, multiple-arch dam in northern Quebec; work on hydro-electric power developments in British Columbia, Saskatchewan, Manitoba, Ontario and New Brunswick; construction of the nuclear power station at Pickering, Ont., in which high-density ilmenite concrete was used for biological shielding; work on the Prince Edward Island causeway; and numerous high-rise buildings in all the major cities of Canada.

Cement.—The volume of cement produced in Canada in 1966 amounted to nearly 8,931,000 tons, 6.5 p.c. above that of 1965. Two new cement plants started producing in Quebec—a two-kiln operation of 2,500,000 barrels annual capacity operated by the Ciment Indépendent Ltée at Joliette and a 3,000,000-barrel-capacity dry-process plant operated by Ciments Lafarge Québec Ltée of St. Constant. These new plants, and the addition of a kiln in the existing plant in New Brunswick, raised the annual rated capacity of the Canadian cement industry to 73,500,000 barrels, an increase of about 10 p.c. over 1965. Plant expansions scheduled for completion in 1967 include a 5,000,000-barrel-capacity dry-process kiln in the Clarkson, Ont., plant of the St. Lawrence Cement Company and second kilns at the Lulu Island plant of Lafarge Cement of North America Ltd. and at the Bamberton plant of the Ocean Cement Limited in British Columbia. These expansions are expected to increase the total annual capacity of the cement industry by 8,700,000 barrels in 1967. Construction of a new 2,000,000-barrel-capacity cement plant has been started by St. Mary's Cement Company at Bowmanville, Ont., to come on stream early in 1968.

¹ Standard portland cement, other than white.

² Shipments plus imports less exports.

³ Includes imported clinker.

⁴ Imports are assumed to be relatively small.

Sand and Gravel.—Numerous deposits of sand and gravel are exploited annually to obtain materials for use in road building, in dam construction, in concrete for building and engineering, and for fill and riprap requirements. The fine sand sizes have many specific uses such as in mortar and plaster. Sand and gravel are low dollar value commodities that must be produced efficiently in highly competitive local markets. In 1966 production increased by nearly 6 p.c. in volume over 1965 and by 13 p.c. in value. The greater value per ton was probably due to increasing labour and equipment costs and to the need for a better quality product. Production of sand and gravel in Ontario, the largest producer, increased by 6.3 p.c. to 94,124,000 tons in 1966. Quebec, the second largest producer, increased its output slightly from 45,101,000 tons in 1965 to 45,877,000 tons in 1966. Increased productivity was also recorded in Nova Scotia, New Brunswick and British Columbia, compared with 1965.

Stone.—Stone quarrying and stone products are the two main divisions of the stone industry, which had an output valued at almost \$105,000,000 in 1966. Stone quarrying comprises the production of rough blocks and crushed materials from ledgerock deposits and intrusive and extrusive igneous deposits. Dimension stone products, including dressed building, ornamental and monumental stones, flagstone, curbstone and paving block, account for approximately 7 p.c. of the total value of stone production. Crushed stone products, consisting of materials used for concrete aggregate, railway ballast, road metal, rubble and riprap, terrazzo, stucco and artificial stone, etc., account for about 78 p.c. of the total value. The remaining 15 p.c. is attributable to materials used in the chemical and allied industries.

Clay Products.—Common clays and shales occur in most regions of Canada and are the principal raw materials used for brick and tile manufacture. Deposits of high-quality argillaceous materials used for such products as papers, refractories, high-quality white-ware, and stoneware products are relatively scarce in Canada. Consequently, china clay (kaolin), fire clay, ball clay and stoneware clay are mostly imported. The value of production of clay products from domestic clays was a record \$42,956,000 in 1966.

During the past 20 years plant efficiency has increased enormously and automation has become imperative for the economical production of good-quality products. Thus, the new facilities established are large modern plants and many small, seasonal and inefficient operations have been discontinued. Extension of plant facilities and installation of new kilns continued during 1966: construction of a new tunnel kiln for firing facing brick at the Chipman, N.B., plant was announced by L. E. Shaw Limited; construction of a \$2,000,000 facing brick plant at Mont Joli, Que., was announced by Esto Ltée; a fourth tunnel kiln for the production of facing brick was under construction by Canada Brick Ltd. at Streetsville, Ont.; the new plant of R & I Ramtite (Canada) Limited at Welland, Ont., began producing a complete range of refractory specialty products; and a \$1,000,000 addition to the Burlington, Ont., plant of Standard Refractories Ltd. will provide facilities for the manufacture of insulating fire brick.

Lightweight Aggregates.—The lightweight aggregate industry continued the expansion it has experienced over the past 10 years, reaching a value of \$7,500,000 in 1966. Markets for expanded clay and shale are established in Western Canada and in Ontario, but in Quebec producers are still struggling for a share of the concrete market. Production of expanded slag increased nearly 25 p.c. with the re-opening of the operation at Port Colborne, Ont., which had been idle since 1962. The only plant processing Canadian vermiculite, located near Perth, Ont., operated for a short period during 1966.

Subsection 3.—Petroleum and Natural Gas

Gross production of crude oil in 1966 averaged 900,000 barrels daily and output of natural gas liquids extracted from "wet" natural gas amounted to 137,000 barrels a day, compared with 1965 totals of 812,000 and 124,000 barrels, respectively. Thus, in total, gross production of liquid hydrocarbons averaged 1,037,000 barrels daily in 1966, an increase of 10.7 p.c. over the previous year. Net production of natural gas averaged 4,228,000 Mcf. a day, a 7-p.c. increase over 1965. Alberta accounted for 63 p.c. of total production, Saskatchewan for 29 p.c. and British Columbia for 5 p.c. The remainder came from fields in Manitoba, Ontario, the Northwest Territories and New Brunswick, in descending order of output. Production of propane, butane and pentanes plus averaged 135,000 barrels a day in 1966. Alberta accounted for 94 p.c. of this production, which consisted of 35,000 barrels of propane, 22,000 barrels of butane and 78,000 barrels of pentanes plus.

The total number of wells drilled in Canada during 1966 decreased to 3,336 (14,085,000 feet), a drop of 12 p.c. from the 3,780 wells (16,502,000 feet) drilled in 1965. All of the decrease was attributable to slackening in development drilling, which totalled 1,602 wells (6,950,000 feet) compared with 2,230 wells (9,535,000 feet) in 1965. This decrease in development drilling reflects the trend to wider drilling spacing units in oil field expansion rather than a slowdown in the pace of development. Exploratory drilling, amounting to 1,514 wells and 6,885,000 feet, was about the same as in the previous year.

Canadian reserves of oil and gas reached record highs in 1966. At year-end, Canada's recoverable reserves of liquid hydrocarbons amounted to 9,050,000,000 barrels, representing a 24-year supply at the 1966 rate of production and a 17-p.c. increase in reserves over the 1965 year-end total. Alberta, with a year-end total of 6,700,000,000 barrels of recoverable reserves, accounted for most of the increase. Included in the Canada total are 1,260,000,000 barrels of natural gas liquids of which 1,200,000,000 barrels are in Alberta.

The Canadian Petroleum Association in 1966 changed its basis for determining gas reserves, reporting proved remaining marketable reserves instead of proved recoverable reserves as previously. Under the new system only the reserves that can be marketed

economically are considered in the reserve total. The proved remaining marketable reserves at the end of 1966 were 43,500,000,000 Mcf., 7.7 p.c. above the 1965 figure.

¹ Includes 3,000 Mcf. produced in Quebec.

Alberta.—The Rainbow Lake region in northwestern Alberta continued to retain the interest of the exploration companies. The Middle Devonian Keg River reef fields discovered in 1965, although limited in areal extent, have excellent producing characteristics and high reserves. Commercial oil and gas production was also obtained from the overlying Middle Devonian Muskeg, Sulphur Point and Slave Point formations. By the end of 1966, twelve separate Keg River oil pools and one gas pool had been discovered in the Rainbow Lake district. The producing trend was extended to Zama Lake, 45 miles to the north, where oil was discovered in commercial quantities in a geological setting similar to that of Rainbow Lake.

The total number of wells drilled in Alberta during 1966 was 1,667, a drop of 14.6 p.c. from 1965. Total footage drilled was down 20 p.c. from 10,200,000 feet to 8,200,000 feet. Both development and exploratory drilling decreased in 1966 with development drilling down 30 p.c. from the 1965 total of 5,700,000 feet and exploratory drilling down 9 p.c. from 4,500,000 feet.

There were several Middle Devonian gas discoveries reported from northwestern Alberta in 1966 and there is also a considerable volume of gas associated with the oil occurrences in the area. Two of the most important gas discoveries were made at Bistcho Lake, 90 miles north of Rainbow. However, the proven reserves of gas from the general region are, thus far, not sufficient to justify the construction of a gas pipeline.

The \$240,000,000 Athabasca bituminous sands project of the Great Canadian Oil Sands Limited neared completion in 1966. The plant is scheduled to begin commercial production in September 1967 with the maximum allowable production rate set at 45,000 barrels a day. The first of two giant bucket wheel excavators was assembled at the site and was in production early in 1967. The two excavators will handle 100,000 tons of sand a day when fully operative. A 226-mile-long, 16-inch-diameter oil pipeline constructed from Fort McMurray to Edmonton to transport the synthetic crude production was completed in 1966.

Saskatchewan.—Although exploratory drilling continued at a high rate in 1966, development drilling declined 17 p.c., mirroring an over-all decline in the discovery rate during the past few years. Total drilling declined 6 p.c. to 4,270,000 feet in 1,168 wells. Exploratory drilling increased from 443 wells (1,621,479 feet) in 1965 to 531 wells (1,921,000 feet) in 1966. Development drilling in 1966 consisted of 637 wells (2,352,123 feet), considerably fewer than the 846 wells (2,939,000 feet) in 1965. Interest in the deeper horizons was revived by the discovery of commercial oil production in the Upper Devonian Nisku formations 90 miles south of Regina. Several small pools were discovered along the established Mississippian producing trend during the year.

British Columbia.—Exploratory drilling in 1966 increased 14 p.c. to 134 wells (687,000 feet) but development drilling was down 30 p.c. to 78 wells (345,000 feet) from 1965. The large decrease in development drilling reflected the general lack of major oil discoveries in recent years. The Inga pool, discovered in 1965 and originally classed as a gas field, was found to have an oil column associated with the gas. This field was rapidly developed as an oil field in 1966 and, although it is classed as a medium-sized pool, it is the most important oil discovery made in British Columbia for some time. Significant gas reserves have been indicated by exploratory drilling in the Beaver River area straddling the British Columbia-Yukon border. Should approval be received for additional gas exports to the United States, Westcoast Transmission Company's pipeline would be extended to serve the area.

Offshore, Shell Canada Limited carried out further marine seismic work prior to drilling a deep test on its extensive holdings off the west coast of Vancouver Island. Drilling was scheduled to start in the summer of 1967.

Manitoba.—The decline in activity that commenced in 1965 continued in 1966. Aggregate drilling amounted to 143,870 feet, down 12 p.c. from 1965. Most of the decrease

was due to a slowdown in exploratory drilling, which at 55,663 feet declined 32 p.c. from 1965 and was limited to 19 wells, all being abandoned. Development drilling totalled 80,037 feet. Production increased 5.7 p.c. to 14,331 barrels a day in 1966, the gain being due mainly to secondary recovery procedures.

Yukon Territory and Northwest Territories.—Exploration in the Yukon and Northwest Territories continued at the same pace in 1966 as in 1965. Twenty-eight exploratory wells were drilled for a total footage of 121,620 feet compared with 18 wells and a footage of 119,581 feet in the previous year. A significant gas discovery was made in the Pointed Mountain area, 30 miles north of the Yukon-British Columbia border, late in 1966. Recently, Pan American Petroleum Corporation contracted to sell 1,500,000,000 Mcf. of gas to Westcoast Transmission Company, the bulk to be provided by the substantial potential reserves of the Beaver River area which straddles the Yukon-British Columbia border. This agreement should stimulate future exploration in the southeastern corner of the Yukon Territory.

Eastern Canada.—In Ontario, both exploratory and development drilling declined to the lowest level in recent years as total footage decreased to 250,000 feet, down 28.6 p.c. from 1965. A total of 146 wells were drilled of which 12 were completed as oil wells and 40 as gas wells. No significant oil discoveries were made but a gas discovery in the Basal Ordovician opened up a potential new area for exploration.

An exploratory test in Manitoba on the west coast of Hudson Bay was drilled to about 2,900 feet. Although the venture was geologically encouraging, no significant concentration of hydrocarbons was encountered. Two exploratory wells were drilled in the Grand Banks area, south of St. John's, Nfld., but both were dry and were abandoned. Geophysical activity continued at a high level on the continental shelf area of the East Coast where acreage held under Federal Government permits increased to 124,000,000 acres.

Petroleum Refining and Marketing.—Daily crude oil refining capacity continues to increase year by year, the total in 1966 reaching 1,141,000 bbl. Canada now has the eighth largest industry in the world in terms of crude treating capacity. Moreover, it is unquestionably one of the most advanced in terms of down-stream refinery units such as catalytic cracking and catalytic reforming.

27.—Crude Oil Refining Capacity, by Region, as at Jan. 1, 1946, 1956 and 1966

Region	1946		1956		1966

Canada.....	245,865	100.0	700,050	100.0	1,141,100	100.0

In 1966, Canadian refineries received 1,038,000 bbl. of crude oil with domestic oil accounting for 58 p.c. of total receipts. Imported crude, on an average daily basis amounted to 434,000 bbl. with 217,000 coming from Venezuela, 91,000 from Iran and Iraq combined, 47,000 from Saudi Arabia, 41,000 from Nigeria, 15,000 from Libya, 13,000 from Trinidad and 10,000 from Kuwait. Imports of refined products increased slightly over 1965 to an average of 163,000 bbl. daily, a gain of 1,000 bbl. daily. Light and heavy fuel oil and diesel oil comprised the major categories of imports.

28.—Domestic and Foreign Crude Oil Received at Canadian Refineries, by Region
1955, 1960 and 1966

Region	1955		1960		1966

Canada.....	287,838	237,698	408,971	347,498	603,242	434,375

Domestic demand in 1966 was made up of 1,106,000 bbl. daily of sales to consumers and 78,000 bbl. daily used in the petroleum industry, a total of 1,184,000 bbl. daily compared with the 1965 level of 1,071,000 bbl. Exports of crude oil, all to the United States, averaged 347,000 bbl. daily and product exports, consisting largely of natural gas liquids such as propane and butane, amounted to 31,000 bbl. daily.

Natural Gas Processing and Marketing.—Natural gas consumers and gas pipeline companies require gas that contains relatively little non-flammable content and is free of noxious components. Since a large proportion of gas produced in Canada does not meet market specifications, there is a major gas processing industry located mainly in Alberta which extracts ingredients that, in themselves, are valuable. These by-products include the natural gas liquids such as propane, butane and pentanes plus and elemental sulphur. At the end of 1966 there were 116 gas plants operating in Canada—102 in Alberta, five in British Columbia, five in Saskatchewan and four in Ontario. The addition in 1966 of 250,000 Mcf. daily of raw gas treating capacity raised the total to 6,350,000 Mcf. daily.

Of the 1,550,000,000 Mcf. of Canadian gas plus imports of 45,000,000 Mcf. available for consumption in 1966, 432,000,000 Mcf. went to the United States, 636,000,000 Mcf. was sold to residential, commercial and industrial consumers in Canada, and the remainder was used by the industry in pipeline, field or plant use. In total, 825,000,000 Mcf. of gas was consumed in Canada compared with 745,000,000 Mcf. in 1965.

Table 29 shows sales of natural gas in Canada as well as the number of customers. During 1966, natural gas supplied roughly 19.5 p.c. of Canada's energy requirements.

Subsection 4.—Coal

Production from Canadian coal mines was about 2 p.c. lower in 1966 than in 1965. Since 1956, annual production has declined about 3,500,000 tons, consumption about 9,800,000 tons and imports about 6,200,000 tons. Exports, on the other hand, doubled in the decade but this increase is accounted for almost entirely by higher exports of Western Canada bituminous coking coal, mainly to Japan. The weak competitive position of Canadian coals is attributed to a number of factors, including high production costs because of low productivity in comparison with coal mines in the United States, and high costs of moving coal long distances, particularly bituminous coal from mines in Nova Scotia and New Brunswick to the industrial centres of Ontario and Quebec. Mechanization of production, underground and surface coal preparation, particularly of slack and fine sizes, and quality control through coal sampling and analysis have all been increased by the Canadian industry in an effort to supply higher quality products at reduced costs.

Assistance to the coal industry was continued in 1966 by the Federal Government and the provincial governments concerned through research programs. The problem of fine coal production continued to receive attention with research directed toward improved methods of mining, beneficiation and combustion. Technical assistance was also rendered in the field of quality control through sampling and analysis, and studies of the coking properties of coals in relation to their preparation for export markets and their use in the metallurgical industry.

Financially, the Federal Government continued to assist the coal industry, through the Dominion Coal Board, in the acquisition of new equipment and by the payment of subventions on coal transportation. The latter amounted to almost \$33,000,000 in 1966 compared with \$26,700,000 in 1965. Assistance amounting to \$3,000,000 was applied to the export of about 1,000,000 tons of coal from Alberta and British Columbia, and federal payments of almost \$3,100,000 were made under the Atlantic Provinces Power Development Act, 1958, which indirectly aids the marketing of coal. Two loans for mine mechanization under the Coal Production Assistance Act were made during the year.

Production, Employment and Consumption.—Coal output in Canada in 1966 amounted to about 11,392,000 tons and the average value for all types was \$7.16 a ton. The number of man-days employed by the industry was 2,199,678 as against 2,233,447 in 1965. All producing provinces (except British Columbia) and Yukon Territory contributed to the decrease; Nova Scotia recorded a drop of 0.9 p.c., New Brunswick one of 4.5 p.c., Saskatchewan 7.1 p.c., Alberta 5.1 p.c., and Yukon Territory 23.5 p.c. Employment in British Columbia mines increased 7.3 p.c.

Of the total coal produced in 1966, 59 p.c. was bituminous with an average value of \$10.70 a ton at the mine, subbituminous accounted for 23 p.c. with an average value of \$2.28 a ton, and lignite for 18 p.c. with an average value of \$1.79 a ton. Production of bituminous coal was down 3.5 p.c. from 1965 but subbituminous and lignite production increased 1.3 p.c. and 0.7 p.c., respectively. The proportion produced by stripping methods was 47.2 p.c. The output per man-day from strip mines was 20.15 tons and that from underground mines 3.11 tons. The over-all output per man-day remained about the same in 1966 as in 1965.

Consumption of coal in Canada in 1966 was about 26,500,000 tons, almost 62 p.c. of which was imported. Of the imported coal, 96.3 p.c. was bituminous coal used mainly in Ontario and Quebec. Imports were slightly lower than in 1965. The production of coke used about 5,900,000 tons of coal, of which about 93 p.c. was imported by Ontario

and Nova Scotia plants. Sales of coal to the commercial and household heating markets amounted to about 1,700,000 tons and those to industrial consumers, including thermal-electric power plants, amounted to 15,100,000 tons, a decrease of 2.4 p.c. from 1965. Exports amounted to 1,229,000 tons in 1966, most of it from Western Canada going to Japan and the United States for blending in the manufacture of metallurgical coke. The exports also included about 3,300 tons from Nova Scotia to the Island of St. Pierre, about 13,000 tons from New Brunswick to the eastern United States, and about 7,400 tons from Saskatchewan to the United States. The manufacture of briquettes decreased from 68,596 tons in 1965 to 38,290 tons in 1966.

¹ Includes coal ex-warehoused for ships' stores.

² Coal or coke.

^{*} Includes small amounts of lignite.

Provincial Production.—Coal is produced in five provinces of Canada and in the Yukon Territory but the largest market for this commodity is in the central provinces where there is no coal production.

Nova Scotia accounted for 33.8 p.c. of the total Canadian output of coal in 1966; its production of 3,854,534 tons was 6.8 p.c. lower than in 1965. The province's coal is mainly high volatile bituminous coking coal mined in the Sydney, Cumberland and Pictou areas, although some non-coking bituminous coal is mined in the Ste. Rose area of Cape Breton Island. The average value at the mines in 1966 was \$13.36 a ton and the output per man-day was about 2.53 tons. All production comes from underground mines, which are mostly mechanized. About 61 p.c. was shipped to other provinces, mainly to Ontario and Quebec, to be used for industrial purposes and the remainder was used locally for steam-raising, power generation, household and commercial heating and the manufacture of metallurgical coke.

New Brunswick's production, of which more than 83 p.c. was strip-mined in 1966 is entirely high volatile bituminous coal mainly from the Minto area, a small amount coming from strip mines in the Chipman and Coal Creek areas. The 1966 production of 898,315 tons was 7.9 p.c. of Canada's output. Average output per man-day from strip mines was 5.33 tons and from underground mines 1.92 tons. The coal had an average value at the mines of \$8.78 a ton. A large part of the production is used locally for heating power generation and processing; in 1966 about 7.3 p.c. was shipped to Central Canada and about 1.5 p.c. to the United States.

Saskatchewan's coal production is entirely lignite, mined by stripping in the Bienfait and Estevan areas in the Souris Valley; this is the only active lignite coal-field in Canada. Production in 1966 was slightly higher than in 1965, amounting to 2,078,165 tons and representing 18.2 p.c. of the Canadian production. The average output per man-day was 47.48 tons and the average value at the mines was \$1.79 a ton. This is the cheapest source of coal in Canada. The Estevan area serves the provincially owned Boundary Dam thermal-electric generating station which uses a large share of the total lignite production. More than 35 p.c. of the 1966 output was shipped to Manitoba and Ontario for industrial, commercial and household use; the remainder was used within the province for similar purposes.

Alberta's production of coal increased 1.6 p.c. in 1966 to 3,467,254 tons, which was 30 p.c. of the Canadian output. Several types of coal are available in the province, ranging from semi-anthracite mined in the Cascade area to subbituminous. Coking bituminous coals are present in the Inner Foothills Belt but, because of market conditions, they are at present mined mainly in the Cascade and Crowsnest areas. In several areas of the foothills, lower rank bituminous non-coking coals are available but production in 1966 was confined to a very small output in the Lethbridge area. Subbituminous coals made up about 75 p.c. of Alberta's coal output in 1966 and were used mainly for household and commercial heating and thermal power generation, the latter using increasing quantities. Production amounted to 2,587,685 tons, which constituted the total Canadian subbituminous coal output. Alberta's output of bituminous coal was 879,569 tons in 1966, an increase of 2.4 p.c. over 1965.

Of the total coal output in Alberta, 70 p.c. was strip-mined and the average output per man-day for strip mines was 31.93 tons compared with 5.24 tons for underground mines. The average value of bituminous coal was \$6.87 a ton at the mine and that of subbituminous coal \$2.28 a ton. About 21 p.c. of the production moved outside the province—11 p.c. to Saskatchewan, 6 p.c. to British Columbia, 3 p.c. (mainly subbituminous) to Manitoba and under 1 p.c. to Ontario.

Most of *British Columbia's* coal output in 1966 came from the Crowsnest area in the East Kootenay district. The remainder came from Vancouver Island and from mines on the northern mainland, where a small amount was produced. The coals range from high volatile to low volatile bituminous coking coals and over 89 p.c. came from underground mines. Production increased 12 p.c. to 1,087,631 tons, representing 9.5 p.c. of the country's output, and had an average value of \$5.92 a ton at the mine. The average output per man-day was 20.34 tons for strip mines and 7.31 tons for underground mines. About 35 p.c. of the production was exported, most of it to Japan for blending in the manufacture of metallurgical coke. In addition, 13 p.c. was shipped to Manitoba, 2 p.c. to Ontario and small quantities to Alberta and Saskatchewan.

Yukon Territory produced about 5,700 tons of coal in 1966 from a single underground mine with an average output per man-day of 3.11 tons. This coal was valued at \$8.18 a ton and was all used locally.

Section 2.—Government Aid to the Mineral Industry

Subsection 1.—Federal Government Aid

Federal assistance to the mining industry takes the form of the provision of detailed geological, topographical, geodetic, geographical and marine data which are of basic importance to the discovery and development of the mineral resources of Canada; the provision, through laboratory and pilot-plant research, of technical information concerning the processing of ores, industrial minerals and fuels on a commercial scale; financial and technical assistance to the gold-mining industry under the Emergency Gold Mining Assistance Act, and certain tax incentives.

The Department of Energy, Mines and Resources.—The federal Department of Energy, Mines and Resources came into being on Oct. 1, 1966. It embraces all of the functions of the former Department of Mines and Technical Surveys, and new functions pertaining to water and energy resources. Apart from its administrative establishments, the Department is made up of four Groups—Mines and Geosciences, Mineral Development, Water, and Energy Development—each headed by an assistant deputy minister and each aiding the Canadian mineral industry in some way.

The Mines and Geosciences Group.—This Group contains four branches—the Mines Branch, the Geological Survey of Canada, the Observatories Branch and the Surveys and Mapping Branch.

The *Mines Branch* is a large laboratory and pilot-plant complex carrying out applied and basic research to discover new and better methods of ensuring mine safety, extracting and refining ores and other minerals, and using metals and minerals in industry and defence. Gratifying results have been achieved in the extraction of metals from ores and in the refining of low-grade crude oil, in the automation of grinding circuits and cyanide leaching processes in gold mills and in the leaching of ground or crushed uranium ores by bacteria. In pyrometallurgy—the extraction of metals by heat—applied research is concentrated principally on the combination of shaft and electric furnaces for smelting iron ore. In petroleum refining, research concerns hydrogenation, catalytic cracking, and catalyst development. This work is highly significant because of the opening-up of unconventional sources such as the Athabasca tar sands and the so-called Colorado oil shales, whose economic importance has been recognized by the Mines Branch for many years. A close tie-in with producers is maintained in mineral processing in which the emphasis is on the concentration of metallic ores and on the processing and improvement of industrial minerals. In the field of mineral sciences, the physical, chemical, crystallographic and magnetic studies being undertaken on sulphide minerals are of fundamental interest. In physical metallurgy, experiments on new alloy combinations continue to yield valuable practical benefits for Canadian industry.

The Mines Branch, on the advice of experts from industry and the universities, also awards an annual series of research grants in mining sciences to Canadian universities. In 1966, the total amount to be distributed annually was raised from \$50,000 to \$100,000.

The *Geological Survey of Canada* carries out geological investigations in Canada and compiles and publishes information in the form of reports, maps and other graphic representations. The scope of its activities extends into many aspects of the geological sciences, including geochemistry, geophysics, geomorphology, mineralogy, palaeontology, petrology, surficial and bedrock geology, and petroleum geology. The Survey's objectives are to systematically study, describe and explain the geology of Canada in order to find out more about the nation's potential mineral resources, and to provide this information to those engaged in discovering, exploring and developing these resources; to increase fundamental knowledge on the origin of rocks and minerals and to develop new theories, methods and instruments; and to help in the scientific training of young Canadians in these fields. Each year, the Geological Survey sends about 100 parties into many parts of Canada. They conduct broad regional investigations in the Canadian Shield, the Appalachian and the Cordilleran geosynclinal belts, the sedimentary basins of the mainland and the Arctic Archipelago, and unconsolidated sediments. As the first systematic reconnaissance of Canada is approaching completion, the country's major geological features are reasonably well known and attention is now given to more fundamental aspects of Canadian geology. An example is the recently concluded agreement with the Province of Quebec for a jointly financed aeromagnetic survey on both sides of the lower St. Lawrence River. The agreement is part of a 12-year \$18,000,000 federal-provincial program of aeromagnetic survey.

The headquarters of the Geological Survey are at Ottawa but it has several regional offices and a recently opened Institute of Sedimentary and Petroleum Geology in Calgary which will serve the special needs of the western provinces. The Survey each year awards a large number of grants in support of geological research in Canadian universities, at present totalling \$150,000.

A great deal of geophysical work of interest to prospectors is being carried on by several divisions of the *Observatories Branch*. Its airborne geomagnetic surveys, which have ranged all over Canada and across the Atlantic to Scandinavia, have become famous

There is also a network of nine permanent geomagnetic observatories, and temporary observatories are placed at many widely distributed sites each summer. The Branch also operates 23 first-order seismic stations and many temporary stations. Gravity research, yet another means of studying the composition of the earth's crust, is also being intensively pursued by field parties in all parts of Canada, including the Arctic and the bottoms of the Gulf of St. Lawrence and Hudson Bay.

No mineral development is possible without accurate, large-scale topographical maps, and progress in this field by the *Surveys and Mapping Branch* continues to be gratifying.

The Mineral Development Group.—This Group conducts broad economic and mineral-commodity studies and gathers comprehensive domestic and world data on all minerals, including energy minerals, for the use of government and private industry. It also licenses and leases mineral exploration in offshore areas south of the 60th parallel and in Hudson Bay, administers the Emergency Gold Mining Assistance Act (see p. 613), and the Explosives Act, and co-ordinates the Department's foreign-aid work.

Current activities in these fields include regional studies of the mineral economy of the Atlantic Provinces, including the Cape Breton coal situation; assessment of mineral projects in various parts of Canada for which federal support has been requested; and the safeguarding of Canadian mineral interests through participation in international agencies such as the United Nations Lead-Zinc Study Group, the United National Steel Committee, the Organization for Economic Co-operation and Development, the General Agreement on Tariffs and Trade, and the International Tin Council. In collaboration with the External Aid Office, the Group is setting up training courses for mineral scientists, technologists and economists brought to Canada under the various aid programs, chiefly the Colombo Plan, and is advising on mineral projects undertaken by Canada as an aid to developing countries. The Group publishes an extensive series of reports and other material, and maintains the Mineral Occurrence Index, which is a listing of about 10,000 mineral showings and deposits in Canada that may be consulted by anyone interested. Also of considerable value to the mining industry are the federal-provincial roads programs described in Chapter XIX, Part III, Sect. 2.

The Water Group.—The Water Group advises on federal water policies, undertakes joint programs with provinces for water conservation and development, co-ordinates the work of federal agencies in water-resource management and water pollution, carries out broad hydrometric and hydrographic surveys, and conducts oceanographic and limnological research. Of interest to the mining industry is the study of pollution problems in mining areas, such as current projects in northeastern New Brunswick and on the headwaters of the Saskatchewan River system.

The Energy Development Group.—This Group examines Canada's total energy situation and requirements, and recommends policies and projects concerning Canada's energy resources. Among the administrative agencies that report to the Minister of Energy, Mines and Resources, four are concerned with some aspect of energy development. These are the National Energy Board, the Dominion Coal Board, Atomic Energy of Canada Ltd., and Eldorado Mining and Refining Ltd. The Assistant Deputy Minister for Energy Development serves as adviser on over-all plans and policies relating to energy.

*The Dominion Coal Board.**—The Board was established by the Dominion Coal Board Act (RSC 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of administering, in accordance with regulations of the Governor in Council, any coal subventions or subsidies voted by Parliament.

* Revised under the direction of Hon. J. Watson MacNaught, Chairman of the Dominion Coal Board, Ottawa.

The Board is empowered to undertake research and investigations with respect to:—

- (1) the systems and methods of mining coal;
- (2) the problems and techniques of marketing and distributing coal;
- (3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (6) the co-ordination of the activities of government departments relating to coal; and
- (7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

The Act authorizes a Board membership of seven, including the chairman. The latter is the Chief Executive Officer, has the status of a deputy minister, spends full time on the Board's business, receives a salary and is in charge of a public service staff. The other members, men of long experience and expert knowledge of aspects and regions of the Canadian coal industry, receive *per diem* payments and travelling expenses while attending Board meetings or while otherwise officially engaged on Board business.

In general, the Board and its staff constitute a central agency through which representations on coal matters are made to the Government from any sector of the industry or the public. Conducting a continuous study of developments and problems within the industry, exchanging information with provincial authorities concerned with coal and with national authorities and agencies in other countries and maintaining the most complete files of Canadian coal information in existence, the Board makes recommendations to the Government and reports to Parliament through the Minister of Energy, Mines and Resources.

Since its inception, the Board has worked toward the co-ordination of the activities relating to coal of various government departments and other agencies. Its own responsibilities in research on the mining and utilization of coal have been carried out mainly by the Fuels Research Centre, Mines Branch, Department of Energy, Mines and Resources although on occasion, the Board has recommended or commissioned specialized types of research to be conducted outside the government service. As a contribution to the co-ordination of coal research and to the dissemination to the industry of technical information resulting from research, the Board initiated the now annual Dominion-Provincial Conferences on Coal. The Dominion Bureau of Statistics collects much of the statistical information required by the Board.

Government purchases of fuel, which constitute an important outlet for coal, claim a part of the time of the Board's staff in an advisory capacity. Advice on fuel matters is also continuously available to all government departments and agencies. A senior official of the Coal Board is chairman of the Interdepartmental Fuel Committee, which advises on the supply, purchase and utilization of fuel for the Department of National Defence, and of the Dominion Fuel Committee, which is organized along similar lines as an advisory body to other government departments.

The subvention assistance on the movement of Canadian coals, which the Board administers, is authorized by votes of money by Parliament; payments are in accordance with Regulations established by Order in Council. This assistance, which has been provided in varying degrees for the past 30 years, was designed to further the marketing of Canadian coals by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. During the year ended Mar. 31, 1967, a total of 6,420,513 tons of coals was shipped under subvention and \$37,698,975 was paid in assistance.

As agent to the Minister of Energy, Mines and Resources, the Board administers loans under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1958, c. 36; SC 1959, c. 39; SC 1960-61, c. 20; and SC 1962-63, c. 13). The Board also administers payments under the Canadian Coal Equity Act (RSC 1952, c. 34), which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the year ended Mar. 31, 1967, payments under this Act totalling \$82,260 were made on 166,182 tons of coal.

Emergency Gold Mining Assistance Act.—Under this Act, which came into force in 1948 (RSC 1952, c. 95), financial assistance is provided to marginal gold mines to counteract the effects of increasing costs of production and a fixed price for gold. By enabling gold mines to extend their productive life, the subventions help communities dependent on gold mining to adjust gradually to diminishing support.

In 1963 an amendment extended the provisions of the Act to Dec. 31, 1967 and also introduced a restriction which affects lode gold mines coming into production after June 30, 1965; such mines are eligible for assistance only if the mine provides direct economic support to an existing community, that is, if the majority of the persons employed at the mine reside in one or more of the established communities that are specified in a schedule to the Act. The restriction does not apply to lode mines in production before July 1, 1965 nor to placer gold mines. A second amendment passed Nov. 28, 1967, extended the application of the Act to Dec. 31, 1970, without changing the method of computing the amount of assistance payable.

The amount of assistance payable to an operator is determined by a formula and is based on the average cost of production per ounce and the number of ounces produced; it ranges from zero to \$10.27 per ounce produced. Gold mines having a cost of production of \$26.50 or less per ounce receive no assistance and those having a cost of production of \$45.00 or more per ounce receive the maximum rate of \$10.27 per ounce.

Under the current formula, the assistance payable to the operator of a gold mine is computed by adding 25 p.c. to the product of two factors, the "rate of assistance" and the number of "assistance ounces". The number of assistance ounces is two thirds of the total ounces produced and sold to the Royal Canadian Mint by a mine in a calendar year. The rate-of-assistance factor is two thirds of the amount by which the average cost of production exceeds \$26.50. The rate-of-assistance factor is limited to a maximum of \$12.33 which is reached when the average cost of production rises to \$45 per ounce of gold produced. The average cost of production is determined by dividing the total allowable costs by the total number of ounces produced in the form of bullion from the mine in a calendar year. Only those ounces of gold that have been sold to the Royal Canadian Mint are eligible for inclusion in the assistance-ounces factor. The cost of production includes mining, milling, smelting, refining, transportation and administration costs. Allowances are made for depreciation, pre-production costs and expenditures on exploration and development on the mine property in accordance with the Regulations.

The amounts paid to operators of gold mines to Mar. 31, 1967 for the years 1948-66, inclusive, totalled \$231,024,273 on a production of 53,380,055 oz.t. of gold produced and sold in accordance with the requirements of the Act. The assistance payable for gold produced and sold under the Act in the calendar year 1966 is estimated to be \$15,600,000.

The Act is administered by the Department of Energy, Mines and Resources with the aid of the Office of the Comptroller of the Treasury in accounting matters.

Subsection 2.—Provincial Government Aid*

Newfoundland.—The Newfoundland Government, through the Mines Branch of the Department of Mines, Agriculture and Resources, provides several valuable services to those interested or involved in exploration and mining, including: the conduct of a

* Compiled from material supplied by the respective provincial governments.

continuing program of mineral assessment designed to encourage development of the mineral resources of the province; the inspection of exploration work carried out on concession areas and the examination of mining operations; the administration of beaches (control of removal of sand and gravel as a conservation measure) and the collection of data relevant to the control of sand removal; the identification of mineral rock specimens submitted by the public and the examination of corresponding occurrences where such is warranted; the dispensing of technical advice, in so far as possible, to those who seek such service (i.e., in hydrological problems and on the availability of quarryable peat moss to be removed by permit); co-operation with the Geological Survey of Canada and other Federal Government agencies; and the preparation and publication of data useful for educational and general informational purposes, including the preparation of mineral and rock sample sets. Geological reports, geophysical maps and compilations of general data pertaining to specific areas are procurable at nominal cost and other information from unclassified files is made available to interested parties. Prospector's or miner's permits are issued by the Mines Branch and mining claims are recorded.

Nova Scotia.—Under the provisions of the Mines Act (RSNS 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. Mining machinery and equipment to be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, or payment, of unworked coal lands, the operation of coal mines, and loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

New Brunswick.—The Mines Division of the Department of Natural Resources has three Branches. The *Mineral Resources Branch* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The Branch is responsible for general and detailed geological mapping and investigations. Maps and reports are prepared for distribution, mineral and rock specimens are examined for prospectors and preliminary examinations of mineral prospects are made when requested and circumstances warrant. The *Mines Branch* administers the safety regulations governing operations under the Mining Act. All mines are regularly inspected, laboratory facilities are maintained and certain equipment used in mines must be approved. The Branch is responsible also for the collection of mining taxes and royalties and the preparation of statistics on mineral production. The *Water Branch* administers the Water Act, is responsible for the use and allocation of all surface, ground and shore waters and for pollution control measures and implements policy matters as determined by the New Brunswick Water Authority. A Regional Office, staffed by geologists and inspectors, is maintained at Bathurst, serving as a recording office for northeastern New Brunswick. Claim maps and topographical, geological and aeromagnetic maps are available for perusal and distribution.

Quebec.—Through its Mineral Resources Branch, the Department of Natural Resources implements the Mining Act (SQ 1965, c. 34). The Branch has four Divisions—Geology, Mining, Laboratories and Pilot Plant.

The *Geological Surveys Division* is concerned with geological exploration, mineral deposits, mapping and hydrogeology. It conducts studies on the geological composition

of Quebec territory for the development of mineral resources; following yearly expeditions, detailed reports of the findings and geological maps of different regions are made available for the use of interested persons. A unique system of index plans affords prospectors a precise, quick and valuable technical documentation. The Division also conducts surveys on underground water and supervises drilling and boring by private companies exploring for hydrocarbons.

The *Mining Division* is concerned with civil engineering and mining exploration and inspection. It issues prospecting and development permits, grants mining lands for working purposes, and collects fees for mining rights. It is responsible for the inspection of mines, quarries and processing plants to ensure that operations are consistent with regulations and to ensure the safety of mine workers. A trained rescue crew of about 375 members operates as three main groups and nine secondary groups. In addition, all workers in active underground mines are trained in rescue operations. The Department undertakes the construction and maintenance of mining roads as authorized under the Mining Act; it has constructed and paid the full cost of certain highways leading to new mining districts. In addition, to avoid the establishment of slums in the vicinity of mining enterprises, the Department regulates the use of the land and authorizes the building of well-organized residential areas.

Laboratories, operated for the use of prospectors, geologists, engineers and mine operators, include equipment for mineralogy, petrography, the dressing of ore, wet and dry assays, spectrography or X-ray photography. Mineral determinations are made free of charge but the assaying of ore content is subject to a fee; free coupons are issued by the Department to be used by prospectors for payment of assays. The laboratories have patented 12 new processes for the extraction and treatment of minerals and, because of the development of such new metallurgical processes, certain minerals once deemed valueless are now of great commercial importance.

To provide for the future development of the mining industry, scholarships are granted to students wishing to follow a career in geology, mining and metallurgical engineering, as well as to students in hydrology or other relevant fields of science (hydro-electricity, hydraulics or meteorology). The Department, in co-operation with universities in Quebec and Montreal, gives yearly courses in prospecting and lectures are given by departmental geologists and engineers at various points in the province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province. The *Mining Lands Branch* of the Department handles all matters dealing with the recording of mining claims, assessment work, etc., and the preparation of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. District Mining Recorders maintain offices at strategic locations throughout the province. The *Geological Branch* carries on a continuing program of geological mapping and investigation and prepares, for the use of the public, detailed reports and maps of the areas studied. A program is under way, in co-operation with the Geological Survey of Canada, through which the whole province is to be flown and mapped in a series of airborne magnetometer surveys. In many active areas of the province, resident geologists gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. A geologist specializing in industrial minerals investigates methods of treatment and recovery of such minerals and compiles data on the uses, specifications and markets for such products. During the winter months, courses of instruction for prospectors are held in various centres throughout the province.

The work done by the *Laboratory Branch* includes wet analyses and assays of metal and rock constituents on a custom fee basis, as well as mineralogical analyses and physical testing. The same service is given free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The *Temiskaming Testing*

Laboratories, situated at Cobalt, operate a bulk sampling plant mainly to assist the producers of the area in marketing their silver-cobalt ores; they also perform fire assays and chemical analyses. The *Inspection Branch* administers the operating rules of the Mining Act which call for the regular examination of all operating mines, quarries and sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Branch and all hoisting ropes in use at mines are periodically tested by a Branch-operated cable-testing laboratory.

Since 1951 the Department has been engaged in a road-building program to give access to mineralized areas and open them for full development. In 1955 this became an interdepartmental project with other interested departments participating through an interdepartmental committee of Ministers which decides on priorities and locations. Actual construction is carried out by the Department of Highways. Under the federal-provincial Roads to Resources Program inaugurated in Ontario in 1959, the provincial government shared equally in the cost of constructing roads to otherwise inaccessible areas (see also the Transportation Chapter, Part III, Section 2). The agreement expired on Mar. 31, 1967.

The *Public Relations Branch* of the Department carries out a regular publicity and information program and maintains a library of films on mining subjects which are available for free loan to the public. Each year, displays pertaining to mining are prepared and presented at the Canadian National Exhibition and elsewhere in the province.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences. Manitoba also aids the mining industry by assisting in the construction of access roads to mining districts.

To encourage the exploration for minerals in Manitoba, the Mineral Exploration Assistance Act was passed in April 1966. This Act provides for the payment of grants to individuals to assist in defraying the cost of exploration within designated areas. If assisted exploration results in the discovery of a deposit, the grant is repayable from the profits of the mine; a grant for exploration that proves unsuccessful is not repayable.

Saskatchewan.—Assistance to the mining industry in Saskatchewan is administered by the Department of Mineral Resources. The *Mineral Lands Branch* of the Department is responsible for administering the Precambrian Assistance Program. This Program, designed to stimulate development and utilization of the mineralized areas of northern Saskatchewan, offers to industry a 50-p.c. rebate of approved exploration expenditures on a specified area or property to a maximum of \$50,000 a year for each individual or company and a maximum of \$150,000 on any one area or property. This Branch is also responsible for making disposition of all Crown minerals and maintains records respecting areas let out by lease, permit or claim. Recording offices, located at Regina, La Ronge, Uranium City and Creighton, assist the public in determining the lands available and accept applications.

Officers of the *Engineering Branch*, under the authority of the Mines Regulation Act, make regular examinations of all mines to ensure proper conditions for the health and

safety of the men employed. Safety education, particularly in the form of first aid and mine rescue instruction, is also a part of the work of this Branch. All Branch officers are stationed at the Regina headquarters.

The Precambrian Geology Division of the *Geological Sciences Branch* conducts geological surveys in the shield areas of the province and publishes maps and reports for the information and guidance of the industry. Resident geologists are maintained at Uranium City and La Ronge and at the latter centre a laboratory provides for the storage and examination of core and samples. The Division processes exploration data and assessment work to be made available for inspection by the industry.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and pays the cost of training mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analyses of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, and the upgrading and cleaning of coal, and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture. (See also p. 424.)

The province from time to time has had commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Income Tax Act. These follow the parallel provisions in the Federal Income Tax Act.

British Columbia.—The Department of Mines and Petroleum Resources of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by departmental engineers and geologists; grub-stakes, limited to a maximum of \$700, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.—As of Jan. 1, 1968, the mineral rights vested in the Crown in right of Canada are those situated in the Yukon Territory and the Northwest Territories, those in the islands of Hudson Bay and under Hudson Bay and Hudson Strait, and those under Canada's continental shelves. The Supreme Court of Canada in a recent decision made it clear that, as between Canada and the Province of British Columbia, the Crown in right of Canada owns and has legislative jurisdiction over lands, including mines and minerals and other natural resources, of the sea bed and sub-oil seaward from the ordinary low-water mark on the coast of the mainland and the several islands of British Columbia, outside the harbours, bays, estuaries and other similar

inland waters to the outer limits of the territorial sea of Canada, as defined in the Territorial Sea and Fishing Zones Act . . .". The Court also decided that the Federal Government owns and has legislative jurisdiction "in respect of the mineral and other natural resources of the sea bed and subsoil beyond that part of the territorial sea of Canada . . . to a depth of 200 meters or, beyond that limit, to where the depth of the superjacent waters admits of the exploitation of the minerals and other natural resources of the said area".

In addition, the mineral rights of some small and usually isolated areas scattered throughout the provinces are vested in the Crown in the right of Canada. The Department of Energy, Mines and Resources is responsible for the disposition of mineral rights and for the administration and enforcement of regulations relating to minerals in Canada's offshore areas, other than those under Arctic coastal waters, in Hudson Bay, the islands in Hudson Bay, Hudson Strait and the small parcels above mentioned. The Department of Indian Affairs and Northern Development is similarly responsible in the Yukon Territory, the Northwest Territories and the offshore rights under Arctic coastal waters; this Department also acts as adviser to Indian bands in Indian reserves and is responsible for the administration and enforcement of the relevant regulations.

Mineral rights of Indian reserves in the provinces are also vested in the Crown in the right of Canada and are administered by the Indian Affairs Branch of the Department of Indian Affairs and Northern Development. The minerals on an Indian reserve may be developed under the Indian Oil and Gas Regulations or the Indian Mining Regulations for the benefit of the Band of Indians having rights to the reserve, only after the Band has given approval by referendum. Indian Band Councils are encouraged to take a share of responsibility in the management of their mineral resources.

Mining exploration is carried out in the Yukon Territory in accordance with the provisions of the Yukon Quartz Mining Act and the Yukon Placer Mining Act; in the Northwest Territories, including Arctic coastal waters, operations are governed by the Canada Mining Regulations 1961 as amended. There are also the Territorial Dredging Regulations, Territorial Coal Regulations and Territorial Quarrying Regulations common to both territories. In the Yukon Territory, mining rights may be acquired by staking claims under the appropriate Acts or Regulations. A one-year lease may be obtained to prospect for the purposes of placer mining, renewable for two additional periods of one year each; a 21-year lease, renewable for a like period, may be obtained under the Yukon Quartz Mining Act.

Under the Canada Mining Regulations, a prospector's licence is required. Staked claims must be converted to lease or relinquished within ten years. In certain areas, a system of exploration by permit over large areas is allowed. Any individual over 18 years of age or any joint-stock company incorporated or licensed to do business in Canada may hold a prospector's licence. No lease will be granted to an individual unless the Minister of the Department involved is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease; no lease will be granted to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are owned by Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange and that Canadians will have the opportunity of participating in the financing and ownership of the corporation. Any new mine beginning production after the Canada Mining Regulations came into force in 1961 will not be required to pay royalties for a period of 36 months, starting from the day the mine comes into production. Production date is established as the date determined under the provisions of the Income Tax Act.

An exploration assistance fund for petroleum and other minerals in the Yukon and Northwest Territories was established by the Federal Government in 1966. Initially limited to \$3,000,000 per year, the fund may provide 40 p.c. of the cost of approved exploration programs. Assistance is available only to Canadian citizens or companies incor

porated in Canada. Named the Northern Mineral Exploration Program, it is designed to encourage investment from additional Canadian sources previously not attracted to investment in northern exploration operations.

Oil and Gas Legislation.—The Canada Oil and Gas Land Regulations and the Canada Oil and Gas Drilling and Production Regulations, issued pursuant to the Territorial Lands Act and the Public Lands Grants Act regulate the disposition of oil and gas rights and regulate exploration and development in the Yukon Territory, the Northwest Territories and the offshore areas of the continental shelves, but not under lands within any provinces. Only subsurface rights and those beneath the sea bed are granted. When required, surface rights are negotiated separately. An exploratory permit may be granted, depending on the area covered thereby, for a term of three, four, six or eight years; a permit is renewable for one-year periods up to six times by the Chief of the Resources Division, Northern Administration Branch, Department of Indian Affairs and Northern Development and further renewals may be granted by the Minister. Leases, which are renewable if oil or gas is still able to be produced, must conform to prescribed land patterns but must not exceed 50 p.c. of the area of an exploratory permit area.

An oil and gas exploratory permit may be issued to any individual over 21 years of age or to any joint-stock company incorporated or licensed to do business in Canada, or incorporated in any province of Canada. No oil and gas lease granted to a permittee will be issued to an individual unless the Minister of the Department involved is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease, or to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are beneficially owned by persons who are Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange, and that Canadians will have an opportunity of participating in the financing and ownership of the corporation.

Provincial Mining Laws and Regulations.*—In general, all Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves, National Parks and other lands which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments. The exception is Quebec where all mineral lands except those granted to individuals in the townships prior to 1880 are administered by the province; also mining rights on federal lands in Quebec are administered by the province.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario, mineral rights are expressly reserved if they are not to be included. In Nova Scotia, no mineral rights belong to the owner of the land except those pertaining to gypsum and building materials, and the Governor in Council may declare deposits of either limestone or building materials to be minerals. Such declaration is to be based on economic value or to serve the public interest. In such case, the initial privilege of acquiring the declared minerals lies with the owner of the surface rights who must then conform with the requirements of the Mines Act. In Newfoundland, mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise, mining rights must be obtained separately by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum and gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

Placer.—In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and sold, and the royalties to be paid.

* Compiled from material supplied by the provincial governments.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia, the most elaborate laws and regulations apply in this division. In all provinces except Alberta and Saskatchewan, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others; a claim of promising ground of specified size may then be staked. In Manitoba and British Columbia a licence is required only for staking and in British Columbia any number of dispositions may be staked under one licence. A claim must be recorded within a time limit and payment of recording fees made, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years except in Quebec where a development licence may be renewed on a yearly basis; also in Saskatchewan there is no work commitment in the first year of the claim. There is no time limit in British Columbia but \$500 assessment work, of which a survey may represent two fifths, must be performed and recorded before a lease may be obtained. In Quebec, a specified number of man-hours of work must be performed and the excess may be carried forward for renewal of licence. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In Saskatchewan, subsurface mineral regulations covering non-metallics stipulate the size and type of dispositions that may be made in order to maintain the disposition in good standing, provide for fees, rentals and royalties, and set out generally the rights and obligations of the disposition holder.

Fuels.—In provinces where coal occurs, the size of holdings is laid down together with the conditions of work and rental under which they may be held. In Quebec, the search for and development of petroleum and natural gas may be carried out under a prospecting or search permit followed by a working lease; the search permit covers a period of five years and an acreage of not over 60,000 acres, whereas the lease extends over a 20-year period and an acreage not over half the acreage of the permit. In Nova Scotia, mining rights to certain minerals, including petroleum, occurring under differing conditions may be held by different licensees. Provision is sometimes made for royalties. Acts or regulations govern methods of production. In the search for petroleum and natural gas, an exploration permit or reservation is usually required; however, in Manitoba, Saskatchewan, Alberta and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made. In Manitoba and Alberta, exploration costs are applicable in part on the first year's lease rental and, in British Columbia and Saskatchewan, credit is given for up to 24 months' rental, having regard to the amount of excess credit established. In other provinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. In Nova Scotia, sand deposits of a quality suitable for uses other than building purposes and limestone deposits of metallurgical grade belong to the Crown; gypsum quarries belong to the owner of the property. On Quebec public lands and on those granted to individuals after Jan. 1, 1966, the stone, sand and gravel, like other building materials, belong to the Crown; quarries located on land granted to individuals prior to 1966 remain in the possession of the owners of the surface; the right to exploit all building materials except sand and gravel may be acquired by ordinary staking-out and the right to work sand and gravel beds is set by regulation. In Saskatchewan, sand and gravel on the surface and all sand and gravel obtainable by stripping off the overburden or other surface operation belong to the owner of the surface of the land. In Alberta, sand, gravel, clay and marl recovered by excavating from the surface belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

Section 4.—World Production of Certain Metallic Minerals and Fuels

Table 33 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1965. These figures are taken from the *United Nations Statistical Yearbook 1966* which presents production figures for a much more extensive list of mining and quarrying industries. The 1965 figures are provisional and have been converted from kilograms to ounces troy for gold, from metric tons to ounces troy for silver, and from metric tons to short tons for the other metals and fuels shown.

33.—World Production of Certain Metallic Minerals and Fuels, 1965

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nations Statistical Yearbook* either because there was no production or because the quantity was not available.

PART I.—FISHERIES*

Section 1.—Fisheries Resources of Canada

Canada's fisheries resources are harvested from two of the greatest oceans and the most extensive bodies of fresh water in the world. Sea fishing is carried out by Canadians primarily in the northwest Atlantic and northeast Pacific within close range of home ports, although some craft venture as far afield as the Bering Sea and the Caribbean. Extensive although not inexhaustible, the living resources of the oceans contribute up to 95 p.c. of the nation's fisheries production; the remainder comes from freshwater stocks in the Great Lakes and other inland waterways. More than 150 species of fish and shellfish are commercially utilized, the most important being groundfish, salmon, lobsters and other shellfish, halibut and herring. The country's fishing industry represents an investment of more than \$200,000,000 in vessels and catching gear, and of tens of millions more in shore facilities. It provides employment income for approximately 80,000 fishermen, 30,000 of them full-time operators, and for 20,000 processing plant workers. Two thirds of the industry's yearly output, which in 1967 was valued at a record \$340,000,000, is destined for world markets.

In the northwest Atlantic, where total fish landings increased by approximately 60 p.c. (from 1,847,000 tons to 2,950,000 tons) between 1954 and 1964, Canada's catch also advanced, although not so spectacularly (33 p.c. from 634,000 tons to 844,000 tons). Groundfish, especially cod, haddock and redfish, are harvested in quantity by fleets from Canada and 15 or more other nations in the northwest Atlantic. Other important species include halibut and other flat-fishes, herring, mackerel, turbot, hake, cusk, pollock, salmon, swordfish and tuna. Shellfish of high market value include lobsters, scallops and clams. Experimental fishing is conducted to probe the potential for commercial fishing of such marine species as crabs, prawns and capelin.

* Sections 1 and 2, and part of Subsection 1 of Section 4 were prepared by the Information and Consumer Service, Department of Fisheries, Ottawa.

Salmon, halibut and herring are the principal species harvested in the Pacific Coast fisheries although a variety of other fish and shellfish are also taken. The catches of the five Pacific salmon—sockeye, chinook, coho, chum and pink—are regulated for conservation purposes, and extensive biological and engineering facilities are maintained in order to safeguard and develop these important stocks. Halibut, which are fished in the Gulf of Alaska and the Bering Sea, are also closely protected by regulations to maintain stocks at optimum levels. Herring are plentiful and are landed in quantity for reduction into fish meal and oil. Atlantic herring catches surpassed those on the Pacific Coast for the first time in 1966, and the combined landings amounted to almost one third of the total Canadian fish catch. Although much effort has been put into the fishery for Pacific groundfish, there appears to be considerable scope for future expansion.

The most important species taken in Canada's freshwater fisheries include whitefish, perch, pickerel, lake trout, herring, pike, suckers, sauger and smelt. Smaller and coarser species have become plentiful in the Great Lakes since native trout stocks were decimated by the parasitic sea lamprey, but some recovery is indicated as effective control of lamprey is achieved.

Section 2.—Commercial Fishing and Marketing, 1966

During 1966, landings in the Canadian commercial fisheries achieved records in both quantity and value. The total catch of 2,600,000,000 lb. had a value to fishermen of \$177,000,000, representing increases over 1965 of 8 p.c. in quantity and 10 p.c. in value. Estimated conservatively, the marketed value of fishery products exceeded \$340,000,000. Both the Atlantic and Pacific regions had record results but only minor changes occurred in the freshwater fisheries.

In British Columbia, salmon landings of 170,000,000 lb. were higher than expected and fishermen were paid a record \$38,600,000 for their catch. Both net and troll fishermen reported high returns and the catch of coho, at 38,700,000 lb., was valued at \$11,900,000, the highest on record. The canned salmon pack reached 1,819,000 cases and was the largest since 1958. Halibut landings were 3 p.c. lower than in 1965 but the average price moved up from 34 cents a pound to 35.8 cents, and brought the fishermen a gross return of \$11,500,000. On the other hand, herring landings fell sharply from 444,000,000 lb. in 1965 to 307,600,000 lb. in 1966; as in 1965, a strike by fishermen, this time late in the year, was a major contributing factor to the lower catch. Landings of groundfish, other than halibut, reached the record level of 49,300,000 lb., an increase of 25 p.c. over 1965. The value to fishermen of groundfish landings was \$3,400,000.

In the Atlantic region, landings of 1,900,000,000 lb. had a value to fishermen of \$98,000,000, increases over 1965 of 230,000,000 lb. and \$400,000. All provinces except Quebec recorded increased landings and landed values. The catches of flounders, haddock and redfish were higher than in 1965 although most of the increase was accounted for by the herring catch which amounted to 550,000,000 lb. compared with 405,000,000 lb. in the previous year. The higher landed value of these species, however, was almost totally offset by lower quantities and reduced prices of lobsters and scallops. Inshore fishermen in some areas, notably lobster fishermen in the Northumberland Strait and cod fishermen on the Quebec north shore, experienced smaller catches in 1966.

In Newfoundland, landings reached 665,100,000 lb., valued to the fishermen at \$26,300,000. A relatively poor cod trap fishery was balanced by higher landings from the growing deepsea fleet and landings of most other groundfish species, except haddock, were substantially higher than in 1965. Herring landings more than doubled in volume and value, reaching 63,900,000 lb. worth \$733,000. The catch in Nova Scotia, boosted by large gains in herring landings, at 695,000,000 lb., was more than 100,000,000 lb. higher than in 1965 but, because of lower shellfish landings and a decrease in prices, the value to fishermen, at \$45,400,000, was \$3,000,000 lower than in the previous year. Heavier landings in New

Brunswick increased the total catch in that province by 45,000,000 lb. to 335,000,000 lb. and, although the value of shellfish landings declined, the total value to fishermen of all species rose by \$447,000 to \$10,900,000. In Prince Edward Island increases in groundfish and mackerel landings exceeded decreases in shellfish landings and the total catch was 58,000,000 lb. compared with 46,000,000 lb. in 1965 but the value to fishermen declined \$820,000 to \$6,000,000. In Quebec, lower cod and herring landings were just about offset by higher redfish and flounder landings and there was a drop of less than 1 p.c. in total volume; on the other hand, the landed value of all species was slightly higher than in 1965.

The value of output of the Canadian fishing industry has been rising steadily during the past few years, particularly since 1960. The increase during the 1960-66 period in the value of processed fish was from \$200,000,000 to an estimated \$340,000,000, the rise reflecting in part higher product prices and in part an increased output of some major products, notably those from the groundfish and scallop fisheries. In the same period, the value of Canadian fishery exports to all countries increased from \$138,000,000 to \$219,000,000. Thus, the value of products increased 70 p.c. and the value of exports increased 60 p.c.

The United States has always been the main outlet for the products of the Canadian fishing industry. In 1966 about 69 p.c. of the total exports moved to that market, a slightly lower proportion than in 1965, although the total value of those exports, at \$150,600,000, was slightly above that of the previous year. Sales to Britain, at \$21,400,000, were at the same level as in 1965; more frozen salmon and cod blocks went to that market but less canned salmon. There was an increase of nearly 60 p.c. in exports to France, which amounted to \$6,200,000 in 1966, the main products responsible for the advance being frozen and canned salmon and frozen scallops. Jamaica and Puerto Rico are the other important markets for Canadian fishery products and sales to these countries in 1966 were, respectively, 27 p.c. and 36 p.c. higher than in 1965. The four countries mentioned took about 86 p.c. of the total Canadian exports, the remaining 14 p.c.—approximately \$30,000,000—going to many countries in all parts of the world.

Nearly 70 p.c. of total exports, by value, are in the form of fresh and frozen fish and shellfish, of which 88 p.c. goes to the United States and the remainder mainly to Western European countries. There was a serious price decline in the United States market for some products in the fall of 1966, particularly for Atlantic groundfish products; this was caused by larger than usual supplies of groundfish fillets and blocks available in that country, coupled with what may be a slackening in the rate of growth of consumption of fish sticks and portions.

Most of the freshwater fish (dressed and filleted), a good proportion of the Pacific halibut and salmon, and all the swordfish are also sold to the United States. The market for these products, with the exception of British Columbia halibut, was firm during 1966 and the prices were generally higher than in 1965. Small quantities of lobster in shell continue to be sold in France, Britain and Belgium but most of it goes to the United States. As a result of the small supply available in 1966, the total quantity exported was about 12 p.c. lower than in 1965 although the average price remained the same. Supplies of scallops were abundant in the United States market during 1966. Cold storage holdings had risen late in 1965 and imports from Canada were about 3,000,000 lb. heavier than in 1965, resulting in large inventories that kept prices depressed until late in the year. The average annual price fell from 68 cents a pound in 1965 to 50 cents in 1966. The main European markets for frozen fish are Britain and France and exports of Pacific halibut and salmon (coho) to those markets increased in terms of both quantity and value during the year.

The downward trend in the Canadian production of salted fish continued in 1966. The situation has been similar in the other main exporting countries—Norway and Iceland—although Norway reported an increase in production in 1966. On the whole, the demand

for salted fish was good during the year and prices firm. Canadian exports totalled 71,000,000 lb. compared with 75,000,000 lb. in 1965 and unit prices averaged 26 cents and 24½ cents a pound in the respective years. Sales to the Caribbean area, Canada's main market, were higher than in 1965 but those to the traditional Mediterranean markets dropped drastically from the already low level recorded in recent years.

Britain continued to dominate the market for canned salmon, particularly sockeye and coho, although sales to that market in 1966 were below those of 1965. Exports of canned sardines increased by some 10 p.c. in quantity and 16 p.c. in value. These two products—canned salmon and sardines—are shipped to many countries; in fact, Canadian canned salmon in 1966 was exported to 59 countries and canned sardines to 39 countries.

Section 3.—Fishery Statistics

The review of commercial fishing and marketing given in the preceding Section covers the situation in 1966 and contains estimated figures for that year. At the time of the preparation of this Chapter, however, the latest statistics available in detail for both the primary production and fish products were those for 1965 contained in the following Subsections.

Subsection 1.—Primary Production

The value of the 1965 catch of fish on the Atlantic Coast was at a very high level; it amounted to \$94,989,000, an increase of 13 p.c. over the 1964 value of \$84,117,000 and 25 p.c. over the five-year 1961-65 average of \$76,216,000. The lobster catch at \$26,632,000 was still the most valuable and cod was second at \$23,637,000.

For the fifth consecutive year, the value of the Newfoundland catch was substantially higher than that of the previous year. The value of landings of all species was \$23,176,000, of which cod accounted for \$13,460,000. Cod landings at 345,204,000 lb. were lighter than in 1964 as were those of haddock, but landings of redfish, turbot (Greenland halibut), plaice and greysole were considerably increased.

The value of fish and shellfish landings by Nova Scotia fishermen in 1965 reached a record \$48,194,000, an amount 18 p.c. above 1964. Lobster and scallops continued to be the most important species from the standpoint of income to the fishermen, having a landed value of \$13,602,000 and \$10,293,000, respectively. Cod was third at \$6,461,000, followed by haddock, swordfish, flounder and sole, pollock and halibut.

New Brunswick fishermen also landed a more valuable catch in 1965 than in 1964. Lobster, herring and cod were the major sources of income to the fishermen, accounting for \$7,307,000 of the total value of \$10,651,000. The herring catch, which has been increasing steadily from a low of 56,269,000 lb. in 1961, reached 182,806,000 lb. in 1965 compared with the five-year 1961-65 average of 125,900,000 lb.

Returns to Prince Edward Island fishermen in 1965 were \$6,825,000, 21 p.c. above the 1964 level. Lobsters, at \$5,177,000, made up 76 p.c. of the total and oysters, at \$399,000 were next in importance. The value of the Quebec landings increased to \$6,938,000 from \$5,894,000 in 1964 as a result of increased landings of cod, redfish, lobster and scallops.

The value of British Columbia landings in 1965 was \$47,435,000, down slightly from 1964. Annual fluctuations in the volume of salmon taken, which make up over half the total landings, materially affect the total value of the catch. Salmon landings in 1966 were 90,190,000 lb. valued at \$25,958,000 compared with 124,198,000 lb. valued at \$30,244,000 in the previous season. The 1965 catch of tuna at 348,000 lb. was higher than that in the previous year but still below the record catch of 487,000 lb. in 1962.

Subsection 2.—Fish Products

According to commodity surveys conducted by the Dominion Bureau of Statistics, the value of sea and inland fish products produced at all industrial levels, including the value to fishermen, amounted to \$315,745,000 in 1965; this was an increase of 7.2 p.c. over 1964 and the highest amount on record. Most of the increase over 1964 took place in the Atlantic Provinces.

¹ Includes value of livers and liver products, States ports.

² Includes landings by Canadian fishermen in United States ports.

The annual output of canned salmon fluctuates considerably with the extent of the catch, as is shown in Table 6. This product has traditionally been the most important of the industry, but the demand for Atlantic Coast frozen groundfish fillets and blocks has been rising so rapidly that the value of the Atlantic products has been in first place since 1963.

Section 4.—Governments and the Fisheries

Under the British North America Act, the Federal Government has full legislative jurisdiction over the coastal and inland fisheries of Canada. The Federal Parliament therefore enacts all laws for the protection, conservation and development of the fisheries and responsibility for the administration and enforcement of these laws is vested in the federal Department of Fisheries. In some provinces, however, this administration has been delegated, by arrangement, to provincial agencies.

Specifically, the federal Department of Fisheries administers all tidal or sea fisheries except those of the Province of Quebec, and also administers the freshwater or non-tidal fisheries of the four Atlantic Provinces, the Yukon Territory and the Northwest Territories. The Provinces of Ontario, Manitoba, Alberta and Saskatchewan administer their own freshwater fisheries and in British Columbia the provincial government controls freshwater species but the Federal Government is responsible for marine and anadromous species. Administration of the fisheries of National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Indian Affairs and Northern Development.

Federal-Provincial Relations.—The mutual interest of federal and provincial governments in fisheries problems is recognized in the undertaking of joint studies and programs, frequently on a regional basis. Regional committees established in recent years have brought together representatives of all governments concerned for periodic discussion. Four groups have evolved: the Federal-Provincial Atlantic Fisheries Committee consisting of representatives of the Federal Government and of the Governments of New Brunswick, Newfoundland, Nova Scotia, Prince Edward Island and Quebec; the Federal-Provincial Committee for Ontario Fisheries; the Federal-Provincial Prairie Fisheries Committee

comprising representatives of the Federal Government and of the Governments of Alberta, Manitoba and Saskatchewan; and the Federal-Provincial British Columbia Fisheries Committee.

Members of the Committees are the Deputy Minister of Fisheries of Canada and the Deputy Ministers of provincial departments responsible for fisheries. Sub-committees make recommendations for industrial development, research and marketing problems. The main committee in each case co-ordinates, where practicable, all activities in the respective fields of responsibility of its members and suggests to the respective governments means of carrying out fisheries programs and projects of common concern. These include the development of methods and techniques in the catching of fish and of shore and plant facilities, and studies of the economics of fisheries to ensure that any proposed program of development is soundly based.

Co-operation between the federal Department of Fisheries and the provinces has taken the form of cost-sharing arrangements on joint projects. Legislation enacted in 1966 grants to the federal Department of Fisheries further powers to enter into such agreements or purposes of modernizing, mechanizing and diversifying the nation's fisheries. The Fisheries Development Act (SC 1966, c. 18), approved by the House of Commons on Apr. 25, 1966, and given Royal Assent on May 12, 1966, served to streamline the operations of the Department by incorporating several of the development activities undertaken under earlier legislation. It empowers the Minister of Fisheries to undertake projects "(a) for the more efficient exploitation of fishery resources and for the exploration for and development of new fishery resources and new fisheries; (b) for the introduction and demonstration to fishermen of new types of fishing vessels and fishing equipment and of new fishing techniques; and (c) for the development of new fishery products and for the improvement of the handling, processing and distribution of fishery products". The Act authorizes the Minister to enter into cost-sharing agreements with provinces, with private companies and with individuals or co-operatives. Financial assistance may be given for the construction and equipment, or modification, of commercial cold storages and mechanically refrigerated wait-freezing facilities to be used for the preservation of fishery products, and for the construction and equipment of fishing vessels. The Act also authorizes the conduct of economic studies in conjunction with universities or other educational institutions and provides for the establishment of advisory committees to assist in the implementation of fisheries development programs.

Subsection 1.—The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:—

- (1) The federal Department of Fisheries with headquarters at Ottawa, Ont., and regional offices under Regional Directors at Vancouver, B.C., Winnipeg, Man., Quebec, Que., Halifax, N.S., and St. John's, Nfld.
- (2) The Fisheries Research Board of Canada with headquarters at Ottawa and biological, technological and oceanographic stations across Canada.
- (3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of each of these agencies is given in this Subsection.

The Department of Fisheries.—Canada's federal fisheries service began with Confederation in 1867 but it functioned as a branch of other departments until 1930, when legislation was enacted to establish a separate Department of Fisheries. The chief responsibilities of the Department are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the maximum utilization of the fishery resources; and to develop a proper public understanding of the

resources and the industry. Services rendered by the Department have been revised and broadened with the times; increased attention has been paid in recent years to the development aspects of the fisheries. About 2,100 persons are employed by the Department, most of them in conservation, protection, inspection and administration duties in fishing areas across the country. The Ottawa headquarters staff numbers about 240.

The Conservation and Protection Service, through a force of Fishery Officers stationed in fishing areas, on patrol aircraft and aboard a fleet of 80 patrol vessels, is concerned with the administration and enforcement of regulations for the conservation of fish stocks and the protection of fisheries.

The Resource Development Service is responsible for the application of technical and scientific means for the cultivation and development of fish stocks by improvement of the freshwater environment of anadromous species, principally salmon and trout, artificial propagation of fish and shellfish in hatcheries, spawning channels, etc., and control of parasites and predators, including the Great Lakes sea lamprey.

The maintenance of quality standards by regular inspection of fish, processing plants and fishery products is the responsibility of the Inspection Service. Additional functions undertaken in 1967 include investigation and extension work in fish handling, processing, storage and distribution. Inspection personnel, through active participation in the international Codex Alimentarius Commission, contribute to the development of world trading standards for fishery products.

The Information and Consumer Service is responsible for informing the fishing industry, fishermen and the general public on activities of the Department through the distribution of printed material, films and filmstrips, and radio and television material. The Consumer Branch of the Service promotes the consumption of fishery products.

Increasing importance of international consultation and co-operation in fisheries was recognized in the formation in 1965 of the International Fisheries Service. An Assistant Deputy Minister to whom this Service reports is also concerned with jurisdictional matters, particularly in reference to territorial waters and fishing zones.

In 1967, as part of an expanding program directed toward development of fisheries, a new post of Director of Federal-Provincial Fisheries Arrangements was established to be responsible for co-ordinating discussions with provinces. Responsibility for program development in fish harvesting and production techniques is exercised by the Industry Development Service, which undertakes a wide range of projects of technical aid and advice to fishermen and the fishing industry, and provides financial support to provinces and the industry for development purposes.

The Economics Service is responsible for the assembly, analysis and interpretation of statistical data on the fisheries, and the conduct of studies and investigations in the primary fisheries and the processing and distribution of fishery products.

Programs of economic aid to fishermen and industry, including the Fishermen's Indemnity Plan, the Newfoundland Bait Service and the Salt Assistance Plan, are administered by the Special Programs Service. The Indemnity Plan, to insure vessels, fixed gear, shore installations and lobster traps, applies in the Maritimes, Newfoundland, Quebec, British Columbia and Ontario.

International Fisheries.—Recognizing the necessity for the orderly regulation of fisheries in international waters, Canada has long been a leading participant in international conferences, conventions and treaties upholding conservation principles. The federal Department of Fisheries assumes a major responsibility for the negotiation, revision and implementation of international fisheries treaties on behalf of the Government.

Canada. The Department is represented by one of its senior officers on each of seven international commissions established under the following conventions to which Canada is a party:—

- (1) the Convention between Canada and the United States for the preservation of the halibut fishery of the northern Pacific Ocean and Bering Sea;
- (2) the Convention between Canada and the United States for the protection, preservation and extension of the sockeye and pink salmon fisheries in the Fraser River system;
- (3) the International Convention for the High Seas Fisheries of the North Pacific Ocean between Canada, Japan and the United States;
- (4) the Interim Convention on Conservation of North Pacific Fur Seals between Canada, Japan, the Soviet Union and the United States;
- (5) the International Convention for the Northwest Atlantic Fisheries;
- (6) the Convention on Great Lakes Fisheries between Canada and the United States; and
- (7) the International Convention for the Regulation of Whaling.

The first international agreement contracted by Canada as an independent nation was a treaty negotiated with the United States in 1923 for the protection of halibut stocks of the Pacific Ocean. An international commission established under that treaty was given broader regulatory powers in subsequent conventions, most recently in 1953 when its name was changed to the International Pacific Halibut Commission.

The International Pacific Salmon Fisheries Commission has achieved much success toward rehabilitation of depleted salmon stocks in the Fraser River of British Columbia. Discussions were held in 1965 and 1966 between representatives of Canada and the United States to consider revision of the 1956 protocol which brought pink salmon of the convention area within the scope of the Commission's activities. Negotiations also took place during the same period and through 1967 in an endeavour to reach agreement on problems arising from the intermingling of salmon bound for rivers of northern British Columbia and southeastern Alaska.

Protection of the high seas fisheries of the North Pacific Ocean is the objective of the International North Pacific Fisheries Commission established under a convention ratified in 1953 by Canada, Japan and the United States. The Commission conducts co-ordinated scientific research programs and recommends conservation measures to be undertaken by the contracting parties.

Fur seal stocks of the North Pacific and its adjacent seas are protected by the Interim Convention on Conservation of North Pacific Fur Seals which was ratified in 1957 by Canada, Japan, the Soviet Union and the United States, and amended by a protocol in 1964. This convention was preceded by an international treaty signed in 1911 which prohibited the killing of fur seals at sea—a measure which, aided by careful management programs, made possible the restoration of depleted seal herds. At the present time, under the terms of the convention, Canada and Japan each receives annually 15 p.c. of the seal skins taken on the United States-controlled Pribilof Islands, and 1,500 skins from the harvest of the Commander and Robben Islands which are under control of the Soviet Union.

The International Commission for the Northwest Atlantic Fisheries conducts studies and makes recommendations for measures to conserve and develop the fish stocks off Canada's East Coast. The convention establishing the Commission was signed in 1949 and has since been ratified by 14 nations: Britain, Canada, Denmark, the Federal Republic of Germany, France, Iceland, Italy, Norway, Poland, Portugal, Romania, Spain, the Soviet Union and the United States. Romania was represented with full membership for the first time at the 1967 annual meeting of the Commission.

A Canadian proposal to bring the conservation of harp and hood seals of the Northwest Atlantic under the ICNAF Convention received final endorsement from member nations in 1966. First steps to initiate an international conservation program were taken at the 1967 meeting, when approval was given to recommendations to shorten the sealing

season, effective in 1968, and to undertake an expanded research program. Conservation measures previously adopted voluntarily by participating nations were confirmed, and consideration is to be given to additional regulations and to proposals for establishing international inspection.

The Great Lakes Fishery Commission, set up under the 1955 Great Lakes Fisheries Convention, provides a channel for joint action by Canada and the United States for research into Great Lakes fish stocks and a program to control the parasitic sea lamprey responsible for depleting lake trout stocks.

As a member of the International Whaling Commission, Canada is obligated to submit statistical data on whales caught by Canadian vessels and to conduct scientific studies on whale stocks of special interest to Canada.

Meanwhile, Canada moved to participate in three additional international conventions.

A draft international convention for the conservation of tuna and tuna-like fishes of the Atlantic Ocean was discussed at a conference in Rio de Janeiro, Brazil, in 1966. Canada was one of 17 nations represented at the conference which considered proposals for establishment of an international commission to study tuna stocks and to recommend maximum catch levels for the various species. Canada also participates in the tuna fishery of the eastern Pacific Ocean, and was represented for some years by an observer at meetings of the Inter-American Tropical Tuna Commission. This Commission was established in 1950 by a convention between the Republic of Costa Rica and the United States, with the aim of studying the relationships between the populations of yellowfin and skipjack tunas and of other kinds of fish taken by tuna fishing vessels in the eastern Pacific. Membership in the Commission was subsequently extended to Panama, Ecuador and Mexico. In view of increasing Canadian interest in this fishery, the Government of Canada in 1967 approved adherence to the Convention.

Also in 1967, Canada was one of 18 nations represented at a Fisheries Policy Conference held in London, England, to consider regulations designed for safety at sea for vessels of countries fishing the North Atlantic. The conference endorsed a Convention on the Conduct of Fishing Operations in the North Atlantic and North Sea which was referred for ratification by the respective governments.

While co-operating with other nations to conserve high seas fisheries resources through international agreement, Canada acted in 1964 to protect inshore fisheries by establishing a 12-mile exclusive fishing zone on all coasts. The Territorial Sea and Fishing Zones Act proclaimed in that year has since been enforced against all countries except those having traditional fishing rights. Negotiations have been conducted with these latter countries with regard to the application of the fishing zones and to the location of base lines from which they are measured.

As evidence of its support for international consultation and co-operation in fisheries, Canada maintains active membership in the Fisheries Division of the Food and Agriculture Organization of the United Nations and in the Codex Alimentarius Commission which is concerned with world food quality standards.

Further involvement in international fisheries came in 1967 when Canada was accepted as a member of the International Council for the Exploration of the Sea. First established in 1902 in Copenhagen, when it was entrusted with the co-ordination of international investigations of the seas, particularly those in the eastern North Atlantic Ocean, ICES has in recent years provided considerable scientific support to the Research and Statistics Committee of ICNAF. There are 16 other member states: Belgium, Denmark, Finland, France, Germany, Holland, Iceland, Ireland, Italy, Norway, Poland, Portugal, Spain, Sweden, Britain and the Soviet Union.

The Fisheries Research Board of Canada.—The Fisheries Research Board is a research organization established by Act of Parliament (RSC 1952, c. 121) for the purpose of conducting basic and applied research on Canada's living aquatic resources, the

environment and their utilization. Its antecedents go back to 1898 and it is thus the lineal descendant of one of the oldest scientific organizations in Canada and one of the oldest government-supported research organizations under the supervision of an independent scientific board in North America.

By its Act, the Board is placed under the control of the Minister of Fisheries. The Board proper consists of a permanent chairman, who is appointed by the Governor in Council and who is a member of the Public Service of Canada, and "not more than eighteen other members" holding honorary appointments from the Minister of Fisheries for five-year terms; the Act requires that "a majority of the members of the Board, not including the chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department [of Fisheries] and the fishing industry". The scientific members are drawn principally from universities and research foundations across Canada, to include specialists in disciplines related to the Board's work. The industry members are selected from among Canada's leading business men with an intimate knowledge of fishing and the fishing industry and the Department of Fisheries representative is usually a senior staff member in Ottawa. Board members have both advisory and executive functions. The advisory functions are delegated in the first instance to regional Advisory Committees who conduct on-the-spot regional reviews and report to the Board on the operations and scientific programs with a view to their improvement. The executive functions are delegated to an Executive Committee elected from Board members and approved by the Minister.

The operations of the Board are highly decentralized, there being only a small administrative, supervisory and publications staff in Ottawa. The responsibilities of the Ottawa office include administration of a grant program to encourage university research in the fields of marine and aquatic science. The Board employs approximately 900 persons, of whom about 250 are scientists.

Biology.—The biological program of the Board is designed to add to fundamental knowledge concerning Canada's vast living marine and freshwater resources. Included here are life history, population and behaviour studies leading to a sound scientific basis for the conservation and management of the commercially important fisheries including those for lobsters, crabs, shrimps, oysters, scallops, clams, marine mammals and other well-known economically important aquatic species of animals, such as salmon, cod, herring and halibut, as well as some marine plants, such as phytoplankton and seaweeds. Also included are studies in fish and shellfish diseases, fish enemies including the ill effects of water pollution, and such basic studies as fish genetics, physiology and behaviour, the latter with a view to improving fish cultural and farming methods and also to improving fish farm and hatchery stocks. Besides these basic studies, new fishing grounds and new species for exploitation are sought and experiments in improving fishing methods are undertaken.

The biological work on the Atlantic Coast is conducted out of research stations located in St. Andrews, N.B., and St. John's, Nfld.; work on arctic fisheries and on sea mammals is directed from a laboratory situated in Ste. Anne de Bellevue, Que.; freshwater work is carried out from a station in Winnipeg, Man.; and work on the Pacific Coast is directed from research laboratories situated in Nanaimo, B.C. The Board operates 18 research vessels for its biological studies, varying from small inshore and lake craft to specially built seagoing ships. The Board acts as Canada's research agent for three international fisheries commissions and two international sea-mammal commissions to which Canada is party.

Oceanography.—Oceanography includes the study of the marine (and freshwater) environment in which aquatic organisms live. This is under continuing study to further knowledge in primary and secondary productivity and the occurrence of ocean and freshwater life of importance to man. Encompassed here also are investigations into the distribution and physical and chemical characteristics of major ocean currents and the

physical and biological structure of large ocean areas including the ocean bottom where concentrations of fish and other aquatic life occur. Ocean climate and ocean weather as they affect the distribution of fish and other living organisms as well as the vertical and horizontal distribution of nutrient matter and the cycle of energy and life in the seas are regularly observed and correlated. These studies, as well as special studies of interest to the Royal Canadian Navy, the Department of Transport and the international fishery commissions, are carried out by the Board's two oceanographic groups operating from Dartmouth, N.S., and Nanaimo, B.C., with strong ship support from the Navy and the Department of Transport, and co-operation from the Department of Energy, Mines and Resources.

Technology.—Investigations are conducted toward improving methods of preserving, processing, storing and distributing fish products, as well as of utilizing all parts of the fish. These include developments in refrigeration and the use of antibiotics as fish preservatives, improvements in canning, smoking and salting of fish as well as the development of new products for the utilization of abundant species that are not now used for food. Fundamental studies of the structure and composition of fish proteins, fish oils and fish hormones, of the energy expenditure of migrating salmon and of the nutrition of marine bacteria are under way.

Technological investigations on the Atlantic Coast are carried out at research laboratories situated in Halifax, N.S., and Grande Rivière, Que., and applied work for Newfoundland is carried out at a Technological Unit in St. John's. For inland areas technological work is centred at Winnipeg, Man., and a research laboratory in Vancouver, B.C., undertakes investigation of Pacific Coast problems.

The Fisheries Prices Support Board.—Established under the Fisheries Prices Support Act of 1944 (RSC 1952, c. 120), the Fisheries Prices Support Board is responsible for investigating and, where appropriate, recommending government action to support prices of fishery products where declines are experienced. The basic principle of the legislation is to protect fishermen against sharp declines in prices and consequent loss of income. The Board is responsible to the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from the fishing industry in the various fishing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices other than its purchase policy nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of \$25,000,000 annually on recommendation of the federal Treasury Board and authorization of the Governor in Council.

In order to stabilize the price of Lake Erie yellow perch, which had been subject to drastic decline due to heavy spring production, the Board in 1966 purchased \$184,000 worth of perch from the summer and fall fishery and re-sold it to the processing trade. From the 1967 spring fishery, a further \$544,000 worth was purchased and held in storage for re-sale in 1967-68. The Board also purchased 23,000 cases of canned mackerel from Northumberland Strait packers to meet requirements of the World Food Program. Close review was maintained of the market for frozen groundfish blocks following price declines but no price support action was recommended.

The Board co-operates with the Economics Service of the Department of Fisheries in the collection and analysis of costs of fishing operations and, in co-operation with the Department of Trade and Commerce, maintains a continuous review of the markets for various fishery products. A small staff is maintained for administrative activities and headquarters of the Board in Ottawa.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with the improvement and development of fishing and production methods. It conducts experiments and demonstrations in new designs of fishing gear as well as the modification of existing types, the construction of multi-purpose fishing craft and the exploration of potential fishing grounds with a view to increasing catching efficiency.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea draggers. Aid to fishermen for the construction of modern vessels capable of a greater variety of fishing operations and larger production is provided by loans from the Newfoundland Fisheries Loan Board and bounty payments at the rate of \$160 a ton for newly constructed vessels under the Fishing Ships (Bounties) Act, 1955. The Fishing and Coasting Vessels Rebuilding and Repairs (Bounties) Act, 1958 authorizes financial assistance in maintaining and prolonging the life of the existing fleet. An Inshore Fisheries Assistance Programme provides a maximum bounty of \$10 a foot on boats measuring from 24 to 35 feet and bounties are also paid to fishermen on certain types of synthetic fibre fishing nets and lines. The Coasting Vessels (Bounties) Act, 1959 authorizes the granting, for locally built ships, of a maximum bounty of \$300 a ton for vessels measuring from 15 to less than 100 gross tons, and \$150 a ton for vessels of between 100 and 400 gross tons.

Other services include: advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics; assistance to fishermen's unions; weather and ice reports; and search and rescue. The Fisheries Salt Act, 1957 provides for rigid control over the use of fisheries salt.

Sport Fisheries.—The inland waters of Newfoundland, although they provide excellent sport fishing, are not commercially exploited. The lakes and ponds actually remain under the authority of the Natural Resources Branch of the provincial Department of Mines, Agriculture and Resources but, under federal-provincial agreement, these waters, including rivers and streams, are under federal control in matters of conservation and guardianship.

Prince Edward Island.—The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity and is concerned mainly with development of the fisheries industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and branches of the federal Department of Fisheries, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at a subsidized interest rate. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act, the Prince Edward Island Industrial Corporation or the Industrial Enterprises Limited.

Sport Fisheries.—Game fisheries are the responsibility of the provincial Department of Fisheries. The streams of the province, mostly spring-fed and fairly constant in flow,

* Prepared by the respective provincial departments responsible for fisheries administration.

provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada and the Provincial Fish and Wildlife Division at various sites in the province. Unfortunately many of the formerly fertile and highly productive ponds of the province have disappeared and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.—Although the Federal Government has exclusive jurisdiction over the marine and inland fisheries of Nova Scotia and attends to all phases of administration related thereto, the Nova Scotia Government operates in several fields where provincial initiative is found to be necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the Nova Scotia Department of Fisheries. The Fishermen's Loan Board is administered by that Department and the Industrial Loan Board by the Nova Scotia Department of Trade and Industry; the first makes loans to fishermen for the purchase of boats and engines and the second makes loans for the construction or improvement of fish processing plants. Fisheries engineers perform inspection and survey duties for the Loan Board and provide technical assistance and advice to loan applicants and others in the fisheries and allied industries, notably the boatbuilding industry. Instructors conduct courses for fishermen in the care and maintenance of marine engines, in basic navigation and in the design, construction and maintenance of gear. The on-course instruction is supplemented frequently by informal on-the-spot assistance to smaller groups who find themselves in need of technical help with particular problems. The Nova Scotia Department of Fisheries, with the financial and/or technical assistance of the federal Department of Fisheries, organizes and conducts explorations of fishing grounds for new resources and the adaptability of new, improved gear and methods.

Sport Fisheries.—In recent years, Nova Scotia, through the Wildlife Division of the Department of Lands and Forests, has spent a considerable amount of money on management and research in certain lakes and streams in the province with a view to aiding the Atlantic salmon and trout fishery. A continuing program of lake and stream investigations was begun in 1961 in order to obtain information useful in the formulation of a fish management program for the future. A system of rearing ponds, capable of producing 200,000 yearling speckled trout annually, has been established on the Medway River in Queens County and the Moser River in Halifax County. Several projects dealing with reclamation, farm ponds, rainbow trout and smallmouth bass are also being conducted. Full-time fisheries biologists are employed by the Division.

The Nova Scotia Travel Bureau, a division of the provincial Department of Trade and Industry, has been promoting saltwater sport fishing by conducting a series of courses for captains contemplating the establishment of charter services, awarding prizes to sportsmen with the largest tuna and bass catches of the season, sponsoring the International Tuna Cup Match and the Intercollegiate Game Fish Seminar and Fishing Match and publishing a brochure listing charter boats available in the province.

New Brunswick.—Commercial fishing is one of the most important basic industries of New Brunswick, employing about 5,800 fishermen with annual earnings of \$11,000,00 and 2,500 plant workers. The annual marketed value of fish products is about \$46,500,00 of which 90 p.c. is exported to the United States. New Brunswick's commercial fisheries both tidal and inland, are under the legislative jurisdiction of the federal Department of Fisheries; angling in Crown waters is the responsibility of the provincial Department of Natural Resources.

The New Brunswick Department of Fisheries, established in 1963, has three Branches—General Administration, Boatbuilding and Maintenance, and Exploratory Fishing and Education. The Fishermen's Loan Board of New Brunswick, created in 1946, is under the jurisdiction of the Minister of Fisheries.

The General Administration Branch is responsible for personnel, accounting, field staff and administration of the New Brunswick Fish Inspection Act and Regulations; it operates three regional offices covering the three main fishing areas of the province. It is very active in promoting the establishment of additional fish processing plants in the province and in developing new markets for fishery products at home and abroad. It also maintains close liaison with various government departments and agencies, both federal and provincial, to assist the fishing industry in the province.

The functions of the Boatbuilding and Maintenance Branch, which is staffed with marine engineers, boat inspectors and a naval architect, include the study, modification and approval of plans and specifications of fishing vessels to be financed by the Fishermen's Loan Board; the inspection of the 100 to 125 vessels of various types and sizes being built every year in the province's 15 shipyards; and the training of fishermen in the proper methods of maintaining hulls and machinery. Continuous efforts are made by the Branch to improve construction standards of inshore fishing vessels. Boats of sturdier construction and equipped with more powerful propulsion engines are enabling inshore fishermen to diversify their operations from the traditional lobster fishery. New designs are being introduced in the fleet of 128 large offshore and 3,200 small inshore fishing vessels which make up the present fishing fleet, the trend being toward larger and more automated vessels. Combination types capable of dragging for groundfish and purse seining for pelagic species are becoming more popular among the younger well-trained fishermen. The West Coast-designed combination trawler-seiner of hard chine construction introduced to the fleet in 1966 has proved successful. One 79-foot unit and one 100-foot unit have been added to the fleet and two additional 100-foot vessels were completed in 1967. Two 87-foot wooden-side trawlers have been added to the existing fleet of ten operating in the Gulf of St. Lawrence. Three 65-foot combination dragger-seiners of wooden construction were built in 1967 as well as one 72-foot dragger, one 54-foot seiner, one 58-foot combination dragger-seiner and one 126-foot stern trawler of steel construction.

The Exploratory Fishing and Education Branch continues the experimental and exploratory fishing and fish processing projects that have been carried on for many years in co-operation with the federal Department of Fisheries. Results of this extensive experimental work and research studies include the establishment of crab fisheries on the east and north coasts of the province; the establishment of a tuna fishery in the Bay of Fundy, on the shores of which a \$4,500,000 canning plant is now in operation. This firm will operate five large tuna seiners fishing the rich tuna grounds off the coast of Chile, as well as the Gulf of Guinea and the Western Atlantic seaboard. In the search for unexploited species of fish and shellfish, in addition to cancer crabs and tuna, commercial quantities of spider crabs and shrimps were located in the deep waters of the Gulf of St. Lawrence and in the Bay of Fundy. During 1967-68, 12 fisheries development projects were undertaken on a shared-cost basis with the federal Department of Fisheries. Offshore exploration for herring in the Gulf of St. Lawrence conducted in 1966 with a B.C. herring seiner was so successful that a fleet of six seiners, five of them from British Columbia, are now harvesting the rich fishing grounds of the area to supply three new fish meal and oil plants of a combined capacity of 900 tons of raw fish per day. The Branch operates a modern school of fisheries at Caraquet where, in 1966-67, 142 fishermen took training in the various phases of their trade. The regular program of the school includes navigation, rules of the road, motor mechanics, electronic devices, fishing-gear technology, business administration, marine biology, oceanography (restricted), radio-telephone, metal and wood working, arithmetic and languages (up-grading) and other related subjects. Arrangements are being made to extend the regular course from five to nine months of the year and to conduct extension courses.

The Fishermen's Loan Board of New Brunswick is a body corporate operating under the jurisdiction of the Minister of Fisheries. Since its inception in 1946 it has granted over 2,000 loans to New Brunswick fishermen for a total of \$17,600,000; total outstanding loans stood at \$6,350,000 in 1967. Loans are repayable within five years on small inshore boats but repayment schedules on large trawlers may extend to 15 years, based on the gross proceeds of the catch. Most of the new fishing vessels being built in the province are financed by the Board, which also acts as agent for the financial assistance program granted by the federal Department of Fisheries to owners of new fishing vessels.

Sport Fisheries.—Sport fishing contributes substantially to the economy of the province, mainly through the tourist trade. Great Atlantic salmon rivers like the Miramichi, the Restigouche and the St. John are known around the world for their prolific production of this majestic game fish and attract many thousands of tourists to the province each year. Anglers catch as many as 50,000 salmon a year in the Miramichi system alone. Many other species are also sought after by both residents and non-residents in the hundreds of streams, rivers and lakes of the province.

Quebec.—The Quebec Department of Industry and Commerce administers the commercial fisheries of the province. For the benefit of producers and fishermen, it operates a network of 58 cold storage plants for the freezing and preservation of fish and the supplying of frozen bait and ice; the plants have a total daily freezing capacity of 500 tons and a storage capacity of 25,000,000 lb. The Department also owns and maintains about 110 stations in small fishing ports where fish are kept under proper conditions while awaiting collection by truck or boat, and an artificial drying plant with a processing capacity of 3,000,000 lb. of fish annually. A staff of fish wardens, technicians and technologists administers fishery legislation and assists in the application of new technique for the expansion of the industry. The central administration is located in Quebec City, with offices at the principal fishing centres. Fish inspection is carried out by federal inspectors who are given additional powers by the provincial government with respect to local sales.

Educational work among the fishermen and producers is conducted by the Department to teach the latest methods of fish preparation and of producing high-quality products. A Fisheries Training School, operated by the Department of Education at Grande Rivière, gives free theoretical and practical courses in fishery to fishermen of all ages. La Fédération des pêcheurs unis du Québec receives encouragement through the Fisheries Division of the Quebec Council of Co-operation subsidized by the Federal Government. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. Fish consumption is promoted through advertising campaigns in newspapers and magazines, exhibits at fairs, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets.

The Department adheres to the federal-provincial agreement on the building of dragners and longliners and assumes the building costs on a capital refunding plan. As of Mar. 31, 1967, the fishing fleet consisted of two 129-foot steel dragners, 14 82-foot steel dragners, 96 wooden dragners, eight combination dragger-seiners, 49 longliners and one boat equipped for clam dragging. The cost of construction of fishing boats since 1951 has been about \$15,000,000 and loans to fishermen have exceeded \$10,000,000.

Biological and hydrographical research is conducted in the Gulf of St. Lawrence directed by the Marine Biological Station at Grande Rivière, and studies of the biology of freshwater fish of the St. Lawrence River and its tributaries are undertaken at a laboratory located in Quebec City. An aquarium in Quebec City exhibits freshwater and saltwater fish in 60 large tanks.

Sport Fisheries.—Sport fishing in the inland waters of Quebec is under the jurisdiction of the Department of Tourism, Fish and Game, which employs 250 full-time wardens and issues the licences required for sport fishing and hunting. It maintains four hatcheries

at strategic points throughout the province for the distribution in public waters of speckled trout, brown trout, rainbow trout and grey trout, splake, ouananiche, maskinonge and salmon.

Excellent fishing may be found in all provincial parks and reserves, except Mont Orford Park. Gaspésian and Laurentide Parks are renowned for trout fishing. Chibougamau Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Eight salmon streams are open to anglers—the Petit Saguenay River, the Laval River, the Moisie River, the Matane River, the Cap Chat River, the Ste. Anne River, the St. Jean River and the Matapédia River.

A joint committee composed of departmental officials and the directors of the Federation of Fish and Game Associations makes recommendations to the provincial government concerning legislation required for the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

Ontario.—The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests, under the authority of the federal Fisheries Act, the Fishery Regulations for the Province of Ontario, the Ontario Game and Fish Act and the Regulations connected therewith.

Commercial Fisheries.—The commercial fishing industry in Ontario provides employment for about 3,000 persons directly and for many more indirectly, and produces an annual yield of from 45,000,000 lb. to 55,000,000 lb. of fish. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie. The principal species of fish taken commercially are perch, smelt, whitefish, pickerel, lake trout, white bass, pike, herring, chub, sheepshead, carp, catfish and bullheads, sturgeon, eels, goldeyes, rock bass, sunfish and suckers. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-foot tugs, and types of gear vary from gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been modernized extensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs, such aids as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Trawling has proved very efficient in harvesting smelt on a year-round basis in Lake Erie.

Most Ontario fishermen are organized into various local associations. Many of these associations are, in turn, represented by the Ontario Council of Commercial Fisheries which performs important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of importance also in the organization of the fishery in the province.

Sport Fisheries.—Angling in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some 68,490 sq. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as brook, rainbow, lake and brown trout, walleye, smallmouth and largemouth bass, pike and maskinonge. It is difficult to measure the total value of the sport fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of \$2,500,000. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 22 forest districts of the province.

Provincial Hatcheries.—Ontario operates 17 hatcheries and rearing stations, the main species reared in these operations being brook trout, rainbow trout, lake trout, smallmouth and largemouth bass, and maskinonge. A program of modernization of the hatchery system is being undertaken—the Normandale Hatchery in Norfolk County has recently been completely renovated and the North Bay Station is under reconstruction.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sport fisheries on the respective lakes. In Algonquin Park, detailed studies concerning lake trout, smallmouth bass and brook trout are in progress and management techniques are being tested against the background of a creel census which has been continuous since 1936. Studies are also being conducted on walleye, parasitology and limnology. A selective breeding experiment concerning the hybrid of lake trout and brook trout is progressing the deep-swimming character of the lake trout and the character of maturity at early age of the brook trout are those being selected for combination in the hybrid. Investigations include the study of exotic species of fish for use in the Great Lakes. Kokanee (sockeye salmon) plantings have been made in Lake Ontario and Lake Huron.

Manitoba.—Commercial fishing has been carried on in Manitoba since 1880. The province has almost 40,000 sq. miles of fresh water and 400 miles of coastline on Hudson Bay but, altogether, about 300 lakes and rivers, covering 30,000 sq. miles, are commercially fished. Some 3,400 persons are employed in primary commercial fishing and an equal number derive part of their living from fish processing and the supply of materials and services to the industry. The industry is particularly important to people living in remote northern communities where fishing provides a major part of their cash income but, even so, almost two thirds of the catch is taken in the southern part of the province. In 1966-67 Lake Winnipeg produced 8,063,600 lb., Lake Manitoba 6,510,200 lb., Lake Winnipegosis 4,330,100 lb. and other southern lakes 659,100 lb. The northern lakes produced 10,367,300 lb. The total value to the fishermen in 1966-67 was \$4,787,502 and the value as marketed was \$7,544,700. The average marketed catch for the five years 1963-67 was 32,003,600 lb., worth \$4,293,000 to the fishermen and \$7,138,000 at the wholesale level after processing. About half of the catch is taken during open water and the remainder through the ice in winter.

There are 15 kinds of fish caught commercially in Manitoba but those of highest annual value to the fishermen are pickerel, whitefish, sauger and pike. Over 90 p.c. of the catch is exported, mostly to the United States. A quantity of the less valuable kinds and some processing waste are used as food on mink ranches and for the making of meal; a small industry to process white whales (beluga) for oil and animal food has been established on Hudson Bay. Capital investment in gear, boats, warehouses, etc., approaches \$4,000,000.

Supervision of commercial fishing operations and the enforcement of the Manitoba Fishery Regulations occupy a staff of Conservation Officers who patrol the province using diesel boats during the open water season, snowmobiles and light trucks during the winter and aircraft in remote areas. The Fisheries Branch of the Department of Mines and Natural Resources, in co-operation with the Department of Health, conducts a systematic program of plant inspection to raise the standard of sanitation and improve the processed product.

A continuing program of biological research is conducted by the Fisheries Branch to provide management information in the interest of a sustained annual yield and a program has been established to test and prove new improved netting and gear which will increase production and lower operating costs. Close liaison is maintained with the federal Department of Fisheries and the Fisheries Research Board in the effort to develop new fish products and effect more complete utilization of the province's fishery resources.

Fish culture activities include two pickerel hatcheries (Lake Manitoba and Lake Winnipegosis), a whitefish hatchery (Lake Winnipeg), a trout hatchery (Whiteshell Provincial Park) and two spawn-taking camps. Fish to replenish the commercial fishing waters are raised in the pickerel and whitefish hatcheries and several kinds of trout as well as splake and sockeye salmon are raised in the Whiteshell hatchery to be planted in sport fishing waters.

Sport Fisheries.—Angling continues to be one of the most popular and most rapidly growing forms of outdoor recreation in Manitoba, and since ice-fishing has come into vogue many anglers are now fishing over the entire year. About 104,000 licensed fishermen, 17,000 of them from outside Canada, spend an estimated \$11,000,000 in pursuit of this sport each year. Although their catch of about 5,000,000 lb. is considerably less than the commercial fishing yield, the monetary value to the province of the sport fisheries is higher. Extensive water areas are reserved for sport fishing only but others are managed for both types of use. Walleye (pickerel), northern pike and the various trout species are the main species taken. Either or both of the first two species occur in nearly every body of water in the province but trout require a more specialized habitat and occur only in select lakes and rivers.

Saskatchewan.—Approximately 32,000 sq. miles of water, about one eighth of the province's area, provide the basis for Saskatchewan's fishery resource, a resource that contributes much to the economic and recreational activity of the province. Administration of the fisheries is the responsibility of the Fisheries Branch of the Department of Natural Resources; its head office is located in Prince Albert. The Branch has three main Divisions—Management, Research and Fish Culture—which are responsible for planning policies; developing programs to ensure the proper management and utilization of the fishery resource; interpreting and explaining policies, programs and regulations; administering the Acts and Regulations (both federal and provincial); and adapting regulations to meet changing conditions. Its objective is to encourage efficient multi-use of the fishery, taking into consideration the interests of the various groups concerned—commercial fishermen, mink ranchers, anglers and the public generally.

The commercial fishery in Saskatchewan averages about 14,500,000 lb. annually and consists mainly of whitefish, lake trout and walleye. In 1965 the total catch of 14,933,000 lb. had a market value of \$3,480,000, of which \$1,734,000 was received by the fishermen. This was an increase over the previous year, the result of a better harvest of northern pike and tullibee. Eighteen local fishermen co-operatives, representing 1,545 fishermen, marketed 46 p.c. of the total harvest in 1965. During the year, 329 free Indian permits and 1,121 domestic fishing licences were issued, resulting in a catch of about 1,200,000 lb. of fish of all species; the 61 mink ranchers licensed to fish for 7,272 breeders produced an estimated 4,300,000 lb. of rough fish (suckers, burbot and ciscoes).

The Fish Research Division conducts biological surveys on most of the large lakes and on many smaller water bodies and streams in the province to provide information for the development of fisheries management policies and programs. The current program is designed to determine productivity of water bodies, secure information on abundance and relationship of fish species, investigate ecology and assess factors affecting environment of fish, develop techniques to achieve maximum harvest of fish populations without prejudice to continued production, and develop techniques to facilitate rehabilitation and stocking of small water bodies. Continuing limnological and fisheries surveys are conducted on lakes along the Lac la Ronge highway, along Highway 106, on the Saskatchewan River delta, and on Jackfish, Murray, Green and Turtle Lakes. A long-term creel census is being taken on Lac la Ronge and studies have been conducted to test survival of young northern pike.

Spawn camps are operated in northern Saskatchewan to collect lake trout, whitefish, northern pike, walleye and arctic grayling eggs. These, along with rainbow and eastern

brook trout eggs received from the United States and alpine charr from France, have been incubated and hatched at the Fish Culture Station at Fort Qu'Appelle. Millions of fry are stocked in many water bodies in the province.

Sport Fisheries.—Saskatchewan has some of the finest sport fishing waters in Canada. A total of 101,480 angling licences were sold in 1965. To meet recreational demands, 141 examinations of water bodies were conducted during the year. Because of severe winter conditions, nine were rejected as having insufficient oxygen to support fish life during the winter months.

The experimental rehabilitation program has been continued along the Churchill Lake road to test low concentrations of toxicants. This program has resulted in the introduction of rainbow, brook and splake trout, arctic grayling and kokanee (salmon) into previously rehabilitated lakes. Good catches of these species are ample proof that lake reclamation is providing excellent opportunities for the Saskatchewan angler. Record game fish species, taken during the season, included a 43-lb. lake trout from Little Bear Lake (Highway 106); a 30-lb. northern pike from Grease River, Athabasca Lake; a 10-lb. 11-oz. walleye from Chitek Lake; a 10-lb. 9-oz. rainbow trout from Piprell Lake and a 4-lb. 4-oz. grayling from Fond du Lac River.

Alberta.—Commercial and sport fishing is administered by the Fish and Wildlife Division of the Department of Lands and Forests, under the authority of the Fisheries Act (Canada) and the Fishery Act (Alberta). Production of commercial fish from Alberta's 6,485 sq. miles of fresh water for the year ended Mar. 31, 1966, was 8,894,225 lb. Landed value of the catch was \$720,886 and marketed value amounted to \$1,188,319. Lake whitefish, the most valuable commercially caught fish, accounted for 49 p.c. of the total marketed value, although this species represented only 21 p.c. of the total landings. Production of tullibee, primarily used for animal food, dropped 50 p.c. from the previous year but remained in second place in value among the fish marketed. Other species taken, in order of marketed value, were pickerel (walleye), pike, perch, burbot (ling), trout and suckers. Of the total quantity taken, 1,842,854 lb. were marketed outside the province and of this amount 1,672,745 lb. were exported to the United States.

Sport Fisheries.—Angling licence sales increased from 125,000 in the year ended Mar. 31, 1966, to 133,092 in 1966-67. Fish hatchery facilities in Calgary and the rearing station at Raven produced 3,895,600 trout and kokanee (salmon) for stocking provincial waters. Rainbow trout accounted for about 90 p.c. of the total and cutthroat trout, brown trout brook trout and kokanee made up the remainder. In addition, 700,600 walleye, perch and pike were stocked in various locations where winter-kill had removed resident populations or where new introductions were required.

Reorganization within the Fish and Wildlife Division resulted in the creation of two additional biological districts, making a total of six districts. District fishery biologist carried out biological surveys and initiated several research projects. A special project was undertaken in northern Alberta to determine the sport and commercial fishery potential of waters north of the 55th parallel of latitude.

British Columbia.—A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking, the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing.

and clam fishing in tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. The commercial harvesting of oysters and marine aquatic plants is regulated by provincial permits and licences. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Regulation and administration of net fishing in the non-tidal waters of the province, including commercial fishing and authority for regulation of the game fisheries in non-tidal waters, is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The Branch co-operates closely with the Fisheries Research Board of Canada. The biological research into those species of shellfish over which the province has control, principally oysters and clams as well as marine plants, is conducted by the Fisheries Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

PART II.—FURS

Section 1.—The Fur Industry*

The value of raw furs produced in Canada in the 1965-66 season amounted to \$45,574,485, ranched furs accounting for 63 p.c. and wild furs for the remainder. This was an increase of almost 25 p.c. over the preceding season, due to the higher prices received for almost all furs and to increased production of many important species, although the total catch was down slightly.

Fur Trapping.—The value of the wild fur catch in 1965-66 was \$16,880,304. Beaver remained the most important wild fur bearer, accounting for 34 p.c. (\$5,739,147) of the total value of wild furs produced. Other important varieties were: muskrat (\$3,207,389), hair seal (\$2,128,900), wild mink (\$1,226,046), fur seal (\$1,009,933) and squirrel (\$561,755). Trapping is carried on in all the provinces and in the Yukon and Northwest Territories, the principal producers, in order of importance, being Ontario, Quebec, Manitoba and Alberta. A good proportion of the trapped furs still comes from the central and southern portions of the provinces where each year substantial catches of beaver, muskrat, mink, raccoon, wolf and squirrel are made in areas of mixed farm and bushland. In these sectors most of the trappers operate on a part-time basis, combining fur trapping with wage employment. This does not necessarily indicate that the rugged life of the outdoorsman has lost its attraction—rather it is a question of economics. Because of the failure of fur prices to keep pace with rising commodity costs, it is no longer possible to make a satisfactory living solely from the proceeds of the trapping enterprise. Also, up to the 1940s, most of the alternatives to fur trapping were low paid, physically demanding occupations, such as farm work, lumbering and pulpwood cutting and, compared with these, trapping had its attractions. Now, however, all these jobs have been up-graded while returns from trapping have not improved.

In the northern areas, where few opportunities for wage employment exist, trapping remains an important source of revenue. In the Northwest Territories, no trapping licences have been issued to non-natives since 1938, other than to individuals holding

* Prepared by the Livestock Division, Production and Marketing Branch, Canada Department of Agriculture, Ottawa.

licences at that date and their offspring and, as a consequence, most of the fur catch is now taken by Indian, metis and Eskimo trappers. In the northern areas, native trappers who formerly spent the winter months, along with their families, on the trapline now congregate with their dependants in settlements. While this community-type living has many advantages for the trapper's family, such as regular schooling, medical attention and the broader social life of the settlement, one of the undesirable results is that the areas around the settlements tend to be over-trapped and the less accessible areas neglected, with consequent waste of the fur resource.

In most areas of the country, the numbers of fur bearers are being well maintained. Conservation measures, including the establishment of natural preserves and the protection of scarce species, by limiting the catch or closing the season completely for a time, have been of major assistance in this connection. Also, in many fur-producing areas a registration system has been instituted under which trapping areas are assigned to individuals on a constant basis. Before the introduction of the registration system, competition between trappers in the same territory often resulted in exhaustion of the fur resource.

Fur Farming.—Mink is by far the most important species raised on farms; chinchilla, fox and nutria are also raised but these account for less than 1 p.c. of the total value of pelts produced. Mink farming is carried on in all the provinces, the principal producers, in order of importance, being Ontario, British Columbia, Manitoba and Alberta. The following figures indicate the growth of the industry since 1930:—

Year	Pelt Production	Average Realization	Year	Pelt Production	Average Realization
	No.	\$		No.	\$
1930.....	3,284	10.52	1960.....	1,203,853	14.03
1935.....	30,558	10.58	1961.....	1,271,449	14.50
1940.....	229,202	9.64	1962.....	1,295,672	15.13
1945.....	255,968	21.51	1963.....	1,400,021	15.82
1950.....	589,352	17.08	1964.....	1,416,085	14.92
1955.....	786,760	20.07	1965.....	1,633,152	17.41

The bumper crop of mink pelts that reached the market in December 1965 met with a strong demand and the average price realized was 16.7 p.c. above the 1964 return. To produce these pelts, mink farmers used some 60,000,000 lb. of rough fish and fish frames and 40,000,000 lb. of meat and poultry by-products, in addition to commercial cereals, liver, whale meat and other feeds.

Mink farming has become a specialized business which bears no relation to the production of wild mink pelts by trappers. The successful breeder must have a thorough knowledge of his animals' habits and requirements as well as a sound understanding of the complex field of genetics. The present-day ranched mink has resulted from the crossing of various strains of North American wild mink but selective breeding, with a view to meeting market requirements, has produced a pelt which is far darker in colour than most of the pelts taken in the wilds. Also, colour mutations, which do not usually survive in the wilds, have been carefully developed by the mink farming industry. These mutations have proved to be of inestimable value to the industry, providing a wide range of attractive natural colours and assuring for mink a continuing dominant position on the world's fur market. The most recent mutation is the "Jet Black" mink, which occurred in 1960 on a farm in Nova Scotia. Although this colour phase is common in other animals it had not previously been noted in mink. A herd of the Jet Black mink has since been carefully built up and in 1965 it was possible to offer breeding animals for sale. A substantial number have been purchased by producers in Canada, the United States, the Scandinavian countries and elsewhere. Because of its dominant breeding properties, the Jet Black mink is considered to be one of the industry's most important mutations.

The production of chinchilla pelts increased sharply in 1965 when the quantity marketed was 33.5 p.c. above the 1964 output. The principal producing provinces, in

order of importance, were Ontario, British Columbia, Alberta and Quebec. The following figures show the production of chinchilla pelts in Canada since 1956:—

Year	Pelt Production	Average Realization	Year	Pelt Production	Average Realization
	No.	\$		No.	\$
1956.....	2,705	9.65	1961.....	10,559	14.07
1957.....	4,701	13.84	1962.....	11,193	13.56
1958.....	8,336	13.43	1963.....	12,226	14.03
1959.....	8,558	13.17	1964.....	12,846	13.14
1960.....	9,067	13.06	1965.....	17,146	13.17

The fox farming industry showed a further decline in 1965 when 504 pelts were produced on 39 Canadian farms, compared with 780 pelts produced on 36 farms in 1964. Demand, principally from Japan, continued strong for this fur and the average price for the 1965 pelt crop was \$53.21, which was nearly 23 p.c. above the 1964 average and the highest return since 1929. The decreased pelt production in 1965 was partly due to the fact that breeders, encouraged by the stronger prices, retained more breeding animals than in 1964 but was mainly a continuation of the downward trend in production which has prevailed since the peak year of 1939 when 240,827 pelts were marketed.

Fur Marketing.—The bulk of the Canadian fur crop is sold in one or other of the eight fur auction houses located in Montreal, North Bay, Winnipeg, Regina, Edmonton and Vancouver. The marketing season extends from December each year through to the following June, or until the crop has been sold.

For the marketing agencies, December and January are months of particular stress. Pelting on the mink farms starts around mid-November and by the end of that month large quantities of pelts begin arriving at the auctions, to be included in the December sales. By early January the bulk of the crop has been delivered and since most breeders wish to have their pelts offered for sale immediately, the auctions are hard pressed to classify and catalogue the large quantities involved. In the period Dec. 1, 1965 to Jan. 31, 1966, approximately 90 p.c. of the 1965 crop of 1,633,152 ranched mink pelts was offered for sale, in addition to wild furs which become available in quantity from January onward. Before the growth of the fur farming industry the marketing of furs was spread more evenly throughout the year. The slower process of passing furs from the trapper to the fur buyer and on to the auction house was an important factor in the orderly marketing of the catch.

During the 1965-66 marketing season there was a buoyant demand for all types of Canadian furs and record numbers of buyers from other countries competed with Canadian fur merchants for the auction offerings. Returns for ranched mink were the highest since 1959-60 and many of the important wild fur species realized prices considerably above levels prevailing in recent years. Although the United States and Britain remained the most important purchasers, Canadian furs went to most of the countries of Continental Europe, Australia, South Africa, Hong Kong, Japan and other areas.

Section 2.—Fur Statistics

Subsection 1.—Fur Production and Trade*

Total Fur Production.—Annual figures of raw fur production have been made available by the Dominion Bureau of Statistics since 1920. For a number of years the statistics were based on information supplied by the licensed fur trappers but they are now based on figures of royalties, export taxes, etc., provided by the game departments of all provinces except Prince Edward Island. Figures for Prince Edward Island are based on returns supplied to the DBS by fur dealers in that province.

* Prepared by the Agriculture Division, Dominion Bureau of Statistics.

Table 1 shows the fluctuating trend of the fur industry over the past two decades. The value of fur pelts produced in 1966 reached a high of \$45,574,485, although it should be mentioned that, from 1964 on, the figures include hair and fur seal pelts, which in 1966 had a value of \$3,139,000; omitting the seal pelts, the 1966 figure would be second to that of 1946. The proportion of the total value of pelts sold from fur farms continues upward reaching 63 p.c. in 1966.

¹ Includes seal pelts.

Table 2 shows the provincial distribution of fur production. Ontario continues to lead the provinces and territories in this respect, accounting for 27 p.c. of the total value in the 1965-66 season compared with 25 p.c. in the previous season. Increased percentages were also shown by Nova Scotia, Manitoba, Saskatchewan and British Columbia.

¹ Totals include pelts and values not allocated to a province or territory, mainly Alaska fur seal and Atlantic Coast hair seal.

Wild Fur Production.—The principal kinds of wild fur pelts taken, according to value, in 1965-66 were beaver, muskrat, seal and mink. These four kinds accounted for 79 p.c. of the total value of wild pelts produced, beaver alone accounting for 34 p.c.

Although the number of beaver pelts produced was somewhat reduced compared with the previous year, the average value per pelt increased from \$11.81 to \$15.40. In fact, the average value of every kind of pelt except otter and hair seal was higher in 1965-66 than in 1964-65, some, particularly fox and lynx, almost doubling.

¹ Commonly known as Alaska fur seal; value figures are the net returns to the Federal Government for pelts sold.

Fur Farm Production.—Mink accounts for over 99 p.c. of the total value of fur farm production. In 1965 the number of mink pelts taken continued upward, reaching 1,633,152 with a value of \$28,439,444. The number of all other types of pelts taken on fur farms was only 18,739 valued at \$255,961.

On the whole, there was little change in the number of fur farms operating in 1965 compared with 1964, some provinces reporting small increases and others small decreases. Mink farms increased in number from 2,122 to 2,171 and the number of animals on those farms at year-end was 769,322 compared with 699,573 a year earlier. Chinchilla farms increased in number from 472 to 560 and the number of animals from 49,352 to 62,658. In 1965, 110 farms raising nutria reported 3,924 animals and 39 farms raising fox had 333 animals, both slight increases over the previous year.

Exports and Imports.—The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being by far the most valuable followed by beaver, muskrat, seal, fox, and squirrel. Mink, Persian lamb dressed seal, fox, muskrat and raccoon make up a large part of the imports. Exports and imports of furs, undressed, dressed and manufactured, to and from Britain, the United States and all countries, are given for the years 1965 and 1966 in Table 6.

Subsection 2.—The Fur Processing Industry

The general term "fur processing" includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves. Tables 7 and 8 give selected statistics for these industries on the "total activity" basis (see Chapter XVI on Manufactures) for 1963-65. In 1965, 218,190 skins were treated, of which mink comprised 28 p.c., muskrat 17 p.c., Persian lamb 11 p.c., raccoon 16 p.c., sheep, shearing and other types of sheep 1 p.c., and all other types of skins 24 p.c.

Section 3.—Provincial and Territorial Fur Resource Management

Most of the fur resources of the provinces and territories of Canada are under the administration of their respective governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Indian Affairs and Northern Development is responsible for all Federal Government interests in wildlife resources except for those related to Indian affairs, which are administered by the Indian Affairs Branch of the same Department. The Canadian Wildlife Service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems (see pp. 46-47). Provincial fur resource management practices are discussed in the following paragraphs.

* Prepared by the respective provincial and federal departments responsible for fur resource management.

Newfoundland.—The wild fur industry in Newfoundland, as elsewhere, has been characterized by short-term instability and long-term decline. In general, the price of furs has declined in the past decade and, since the supply of trappers is partially determined by the profit motive, the number of trappers has also declined. As a result, the fur bearers of the province are now considered to be under-harvested.

Because trapping is no longer profitable for the casual trapper and only large harvests and excellent pelt preparation can repay a trapper for his effort, the maintenance of trapping in Newfoundland requires that the resource be divided among a select group of professional trappers. The beaver-trapline system in operation is a step in this direction. Other fur bearers of sufficient value to be included under the trapline system are mink, lynx, muskrat and otter. A fur bearer biologist was employed by the Wildlife Division of the provincial Department of Mines, Agriculture and Resources in 1966 and intensive research and management in this area is planned for the future.

Nova Scotia.—Nova Scotia's wild fur bearers include beaver, muskrat, mink, otter, fox, raccoon and weasel and the trapping of these animals provides supplementary income for several thousand persons who harvest from \$100,000 to \$200,000 worth of wild furs each year. The value, of course, depends on the numbers of each fur species available and on fur prices, both being subject to marked variations from year to year.

The beaver, once almost extinct in the province, is now the most available fur bearer taken. A \$2 licence is required by residents to trap a limited number of beavers (five to 20) during the approximately 10-week season beginning Nov. 1. No licence is required to trap other fur bearers, although a royalty must be paid to the province for each pelt exported. These animals may be taken between Nov. 1 and Jan. 15.

Beaver research is at present being carried on in Nova Scotia to increase knowledge of this valuable animal as a preparation for better management of its population. Behaviour, feeding, movement and reproduction studies are being conducted near the Tobieatic Sanctuary in western Nova Scotia, in Cumberland County in the eastern part of the province and in an enclosed area in Queens County. In addition, data on size, age, parasites and diseases are collected from beaver carcasses taken by trappers in all parts of the province.

Several trappers' associations have been started throughout the province so that the men closest to the fur resource may have some say in its wise use and management. These groups can also assist in ensuring proper handling and marketing of the raw furs and in up-grading quality, thus commanding good market prices.

New Brunswick.—The initial investigation under the fur management program under way in New Brunswick concerned the muskrat and was conducted in the estuary of the St. John River, one of the better muskrat areas in the province. Such investigation has been extended to other fur bearers, especially beaver. Beaver were protected against trapping for about 20 years until the first open season was declared in 1946. As a result, the beaver has made a remarkable recovery and there has been an open season each year since 1951, the annual take averaging about 7,500 pelts. At present, beaver damage done to farms and woodlots, highways and railways is causing concern.

The trapping of fisher and marten was permitted during the 1964-65 trapping season or the first time since 1946. These animals are found mainly in the northern part of the province but their numbers appear to be increasing and they are gradually working their way southward. During the late winter of 1966, a number of fisher were live-trapped in northern New Brunswick and released in the Fundy Mountains in an attempt to re-establish them there. Mink and otter are not abundant but in the fall trapping season the catches average from 1,500 to 2,000 and from 200 to 250, respectively. In 1965-66, 1,228 trapping licences were issued.

Provincial legislation enables quick changes to be made in trapping seasons; thus, the autumn benefit of available fur may be utilized by a trapper or a closed season

established on any fur bearer showing signs of serious depletion in numbers. A summary of trapping laws, which includes information on how the different pelts should be handled to receive the best price, is available from the Fish and Wildlife Branch of the provincial Department of Natural Resources.

Quebec.—The fur trade has been of considerable importance in Quebec since the beginning of New France and the province has remained in the forefront of fur producers. The principal native species, in order of importance, are beaver, mink, muskrat, hair seal, otter, lynx and marten.

Management of wild fur bearers began in 1932 with the establishment by an official of the Hudson's Bay Company of a privately leased reserve at Rupert House. The administration of this reserve passed to the Hudson's Bay Company and a second concession, at Nottoway, was granted to the Company in 1938. Strict conservation practices were enforced in these two reserves with such success that the provincial government took over their management and has since added steadily to the area of Crown lands set aside for Indian trappers. At present, 12 reserves are under conservation: Rupert House, 7,500 sq. miles (1932); Nottoway, 11,300 sq. miles (1938); Vieux Comptoir, 30,000 sq. miles (1941); Peribonca, 12,600 sq. miles (1941); Fort George, 17,700 sq. miles (1942); Abitibi, 6,000 sq. miles (1943); Great Victoria Lake, 6,300 sq. miles (1948); Mistassini, 50,000 sq. miles (1948); Manouane, 5,000 sq. miles (1951); Roberval, 20,000 sq. miles (1951); Bersimis, 21,000 sq. miles (1951); and Saguenay, 140,000 sq. miles (1955).

In 1945, a separate system of registered lands for white trappers was set up in the areas of Abitibi East, Abitibi West, Rouyn-Noranda, Témiscamingue, Pontiac and part of Saguenay County. Each leaseholder is granted exclusive trapping rights on his assigned land and each is subject to strict regulation. The trapping of fur bearers, other than beaver, is not restricted on either the reserves or the registered lands except for a general regulation concerning the protection of animals and the fixing of catch limits. Recently biological research has been undertaken to assess the results of this system.

In 1965-66, the value of the catch of wild furs in Quebec amounted to \$2,258,165—fraction of the value of the finished product.

Ontario.—Legislation for the management of wild fur bearers had its beginning in Ontario with the setting of seasons in 1860 by an Act of Upper Canada. However, 3 years passed before there was any field staff to enforce the regulations and then began a era of restrictive legislation to protect species threatened by the earlier exploitation. Progress beyond the restrictive enforcement of open and closed seasons has come about only in the past 20 or 30 years. The first steps in this direction involved the setting aside of special Indian hunting areas in which non-Indians were not allowed to trap.

The registered trapline system was introduced in 1935 on a very small scale. The system is based on government recognition of the desirability of full utilization of the resource and the more efficient management that results when one individual enjoys the exclusive right to trap on such an area. In its early stages, surveyed townships were assigned as trapline areas but more explicit trapline boundaries, established in 1947-48, now cover the province and mostly follow natural physiographical features. At the same time resident traplines were established in areas of patented land, which means most of southern Ontario; these are blocks of land on which trappers are licensed to trap, providing they make their own written agreements with the landowners. Trapline licences are renewed annually as long as the trapper meets the conditions of the regulations and continues to trap. Trappers may sell the equipment and improvements they have made on their line and thus have a vested interest in their traplines.

In full realization that fur is a natural resource that cannot in nature be stockpiled and is harvested on a commercial basis only, the Ontario Department of Lands and Forests has assisted the Ontario Trappers' Association to establish their fur auction at North Bay. This allows the trappers to sell furs on a competitive market and realize their full value.

Much valuable research has been carried out on fur bearers, with present emphasis on beaver and otter. Transplantings have been successfully carried out to speed the recovery of reduced populations, particularly with beaver. A new aging technique was perfected for beaver a few years ago and recently an aerial beaver survey technique has been developed.

Manitoba.—Trapping and trading in furs is Manitoba's oldest industry and the province produces some of the finest pelts on the world markets. The annual value of the wild furs averages around \$1,630,000.

As the northern areas of Manitoba became more accessible following the construction of the Hudson Bay Railway to Churchill, competition for fur and for trapping grounds became very keen and the fur resources were badly depleted. However, since 1940 a program of trapline registration has been in operation which has eliminated indiscriminate trapping and has offered protection to both the fur bearer and the trapline operator. The once-scarce beaver has been rehabilitated through years of controlled and managed harvests, production reaching 34,216 pelts during the 1965-66 season. A live transplant project has also been implemented to re-stock areas where beaver and marten have become depleted. During the past decade new records in the production of muskrat, mink, lynx, fisher and otter have been established.

The wild fur industry is still of economic importance in Manitoba, particularly so for northern residents, both white and native. A trapper education program was inaugurated in 1957, designed to improve the general handling of furs by trappers and at the same time achieve a certain measure of standardization in pelt care. This program has shown gratifying results and has been expanded to include improved trapping methods and the use of humane trap sets. A booklet, *The Trapper's Guide*, is available from the Wildlife Branch of the provincial Department of Mines and Natural Resources.

Manitoba has been working in close co-operation with federal and other provincial agencies in the promotion of quality furs by exhibiting collections of representative wild furs at the more important European fairs.

Saskatchewan.—Before 1945, little was done to control the trapping of beaver and muskrat in Saskatchewan, other than to establish closed seasons when the fur bearers became depleted from over-trapping, and the lack of a conservation and management policy had a disastrous effect on both the fur resources and the livelihood of trappers. In 1944, the provincial government set up a committee to study trapping problems and the following year the South Saskatchewan Muskrat Trapping Program was instituted. Under this plan, individuals received exclusive rights to trap on definite land locations. Owners and occupants received first consideration, with special priority given to Indians and metis on Crown lands. Muskrat quotas were established to assure continuing populations, and marketing of pelts under government supervision was instituted.

In 1946, under federal-provincial agreement, all Crown lands north of the 53rd parallel were set up as the Northern Fur Conservation Block. Up to \$50,000 a year was to be expended over the following ten years to establish and administer conservation areas, purchase equipment, pay salaries of personnel, transplant live beaver and build dams; the Federal Government agreed to assume 60 p.c. of the cost and the province the remainder. A Fur Advisory Committee, with representation from the provincial Department of Natural Resources and the federal Indian Affairs Branch was set up to supervise the program. Organization of conservation areas was left to the trappers. Five-man councils were elected in all districts, with Indian, metis and white trappers sharing privileges, obligations and responsibilities on an equal basis. Conservation measures and licensing regulations were initiated. In 1956 the agreement was extended for another ten years with minor changes and in 1962 a co-ordinating body was set up by the Fur Advisory Committee to promote better communications and understanding of the fur program. The second federal-provincial agreement terminated in 1966 and negotiations were begun on a new agreement that will carry on the same program and extend the resource manage-

ment features, the latter to be activated particularly by natives of northern isolated areas. The northern fur conservation program in Saskatchewan has served as an important vehicle to encourage these people to plan and carry out other programs vital to their own well-being.

During the two decades of the province's fur program, security of trappers has been strengthened; fur bearer population has reached a higher general level, particularly of beaver; quotas have put trapping on a sustained-yield basis; poaching has been almost eliminated; higher water levels resulting from the comeback of beaver have improved the habitat for other wildlife; and Indian, metis and white trappers are sharing alike in the self-government of trapping areas and in fur management programs.

Alberta.—Plans have been formulated for the reorganization of the Fish and Wildlife Division of the provincial Department of Lands and Forests. Under the new set-up, a fur management section will be established to work strictly on the fur resources of the province. More meetings will be held with registered trappers to increase the exchange of information between them and the Division's officers and a more intensive program is being initiated to eliminate as far as possible the misuse of trapping areas by certain trappers and, by amalgamation, to form trapping areas into better economic units. The Alberta Government submits pelts to the main fur exhibits in Canada and Europe, a policy that has increased the interest of foreign and Canadian buyers in Alberta furs.

British Columbia.—The British Columbia wild fur resource is administered by the Fish and Wildlife Branch of the Department of Recreation and Conservation. Regulations are derived under authority of the Wildlife Act and resource use is controlled under the registered trapline system, in effect since 1926. Registered traplines are areas of Crown land allotted, for the purpose of trapping wild fur, to trappers who are resident in the province. Registration of a specific trapline is renewable on an annual basis by the trapper, subject to certain requirements of tenure aimed at conservation and sustained yield of fur species. Approximately 3,000 trappers are involved in provincial wild fur production, of whom one half are Indians.

The market value of wild fur produced during the fur harvest of 1965-66 was \$889,332, with beaver, lynx, muskrat and mink together comprising 79 p.c. of this total value. The 1965-66 beaver harvest numbered 28,751 pelts.

Section 1.—Electric Power Development

Subsection 1.—Historical and Current Trends in Power Development

Electric power development in Canada has undergone remarkable and sustained growth since the beginning of the century. From a modest 133,000 kilowatts of generating capacity installed at the end of 1900, Canada's installed hydro capacity rose to almost 22,700,000 kw. by the end of 1966 and thermal capacity to 8,700,000 kw.

The chart on p. 661 shows the expansion in installed generating capacity in hydro and thermal stations that has taken place since 1920. Thermal-electric power development in Canada was not well documented early in the century but it is apparent that its growth was slow and of relatively minor importance until the late 1940s. The rate of development of hydro facilities, on the other hand, tended to accelerate after the turn of the century when improvements in electric power transmission techniques were introduced and increasing emphasis began to be placed on the construction of large hydro-electric stations.

During the prosperous 1920s, demand for electricity became heavier and the rate of installation increased appreciably. Then, under the depressed conditions of the early 1930s, power demand dropped off but did not show up immediately as a drop in the installation rate because of the time lag inherent in hydro-electric power development. The completion of hydro projects initiated prior to the depression period accounted for the continuation of a high rate of capacity installation up until 1935; thereafter, poor economic conditions in the 1935-39 period resulted in a reduced rate.

In the early war years, the tremendous demand for power to drive Canada's war industries accounted for the sharp rise in installation of new generating facilities between 1940 and 1943, but in the later war years construction dropped off so that, from 1944 to 1947, a second flattening occurred in the growth curve. After the War, industrial expansion and rapidly growing residential and agricultural development placed extremely

* Sections 1 and 2 of this Chapter were prepared by the Water Resources Branch, Department of Energy, Mines and Resources, Ottawa; Sections 3 and 4 were revised by the Energy Statistics Section, Industry Division, Dominion Bureau of Statistics, and Section 5 by the various provincial Commissions concerned.

heavy demands on power generating facilities, to stay abreast of which the addition of new capacity was required at a rate higher than at any time in Canada's history. These demands also led to the start of an extensive program of thermal plant construction in the early 1950s, since they could not be satisfied from hydro sources alone. In the period 1950-66, the average annual rate of installation of both hydro and thermal facilities was about 1,400,000 kw., with hydro contributing two kilowatts of new capacity for each kilowatt contributed by thermal. However, it is interesting to note that the average increase in thermal generating capacity over the period 1961-66 has approximated the average increase in hydro capacity.

Table 1 shows the status of installed generating capacity in hydro and thermal stations and the combined total for all stations in Canada as at Jan. 1, 1967.

Current Trends.—Although water power traditionally has been and still is the main source of electric energy in Canada, thermal sources some day will undoubtedly become the main supplier. The choice between development of a hydro-electric power site and construction of a thermal generating station must take into account a number of complex considerations, the most important of which are economic in nature. In the case of a hydro-electric project, the heavy capital costs involved in construction are offset by maintenance and operating costs considerably lower than those for a thermal plant. The long life of a hydro plant and the dependability and flexibility of operation in meeting varying loads are added advantages. Also important is the fact that water is a renewable resource. The thermal station, on the other hand, can be located close to the demand area, with a consequent saving in transmission costs. With the current trend to large steam stations, however, a certain amount of the flexibility of location of thermal stations is lost because such units require considerable quantities of water for cooling purposes, making it essential that they be sited close to an adequate water supply.

The marked trend to thermal development which became apparent in the 1950s can be explained in part by the fact that, by that time in many parts of Canada, most of the hydro-electric sites within economic transmission distance of load centres had been developed and planners had to turn to other sources of electric energy. More recently, however, advances in extra-high-voltage transmission techniques are providing a renewed impetus to the development of hydro power sites previously considered too remote.

Because of the relatively long starting-up time required by large thermal units, thermal stations tend to lack flexibility of operation and can be used most efficiently to meet continuous load conditions. Hydro stations, on the other hand, can put generating units on line with minimum delay and hence are admirably suited to supply power to meet the peak

GROWTH IN ELECTRIC POWER GENERATING CAPACITY IN CANADA, 1917-70

*PROJECTION

loads which may occur several times each day. By combining the advantages of both hydro and thermal stations in integrated supply systems, power producers are now achieving much greater flexibility of operation.

Another trend in development designed to meet the problem of varying daily loads is the use of pumped storage. An example is the Sir Adam Beck hydro development at Niagara Falls where water taken from the Niagara River above the Falls is carried by tunnel and power canal to penstocks which supply the main generating station on the bank of the Niagara River some distance below the Falls. In off-peak hours, power from the main station is used to pump water from the power canal into a reservoir maintained at a higher level; during peak-load hours, the pumps, which are dual-purpose units, operate as generators and are driven by water released from the reservoir. The pumping-generating units at this development make available an extra 176,700 kw. of generating capacity. A pumping-generating station using the same general principle is under construction on the Brazeau River in Alberta as part of the 338,440-kw. Big Bend hydro development.

Perhaps the most promising application of the pumping-generating principle is its use in conjunction with nuclear power stations. Nuclear units, in common with the larger conventional thermal units, can be used most efficiently under conditions of continuous operation. Off-peak nuclear power can be used to operate pump-turbine units and the hydro-electric power derived from operating the units as generators is available for use during periods of peak demand.

Subsection 2.—Utilization of Power

In 1966, Canada's generating facilities produced a total of 157,682,973,000 kilowatt-hours of electric energy, after allowing for the energy used in the power stations themselves. Of this total, 130,063,836,000 kwh. was produced in hydro-electric stations and 27,619,137,000 kwh. in thermal stations. Energy exported to the United States exceeded by 1,252,471,000 kwh. the energy imported from the United States during the year, bringing to 156,430,502,000 kwh. the total energy made available. The diagram illustrates how this energy was used.

Industry uses approximately 55 p.c. of the total electric energy made available in Canada; residential and farm use accounts for 21 p.c. and commercial use 15 p.c. The remaining 9 p.c. is listed under "losses and unaccounted for". Because many power producers do not distinguish in their records between residential and farm customers, the amount of energy used is shown as a combined total. Energy used for street lighting represents less than 1 p.c. of the total energy made available and is included in the "commercial" category.

About 20 p.c. of the total energy made available in Canada is used in the mineral industry, including smelting and refining, 16 p.c. by the pulp and paper industry and 19 p.c. by other industries. Of the latter, the chemical industry and the primary iron and steel industry together consume almost one half. Approximately 75 p.c. of the energy consumed by the mineral industry is used in the smelting and refining of metals.

The incidence of large water power resources in those regions in which the more important mineral deposits have been found has greatly facilitated mining development. Recent examples are the nickel mining and refining complex at Thompson, Man., which

uses hydro-electric power generated in the Kelsey plant on the Nelson River, and the iron ore mining operations in Labrador, supplied by the Twin Falls plant on the Unknown River. Metal mining, a very important division of the Canadian mining industry, is carried on mainly in two physiographic regions, the Western Cordillera and the Canadian Shield. In the Western Cordillera, the mountainous topography and the relatively high amounts of precipitation favour the development of water power. In the Canadian Shield, which is a Precambrian formation stretching in a wide sweep around Hudson Bay from the Mackenzie River basin to the eastern tip of Labrador, heavy glaciation in recent geological times has formed river systems which are comparatively young and are characterized by large numbers of lakes connected by short river sections with numerous rapids and falls suitable for the development of hydro-electric power.

Canada has no known deposits of bauxite but the availability of low-cost hydro-electric power has fostered the establishment of a large aluminum industry which produces mainly for export to world markets. Further evidence of the value of water power to mining operations is provided by the fact that Canada's asbestos industry, which produces about 40 p.c. of the total world supply of asbestos, obtains the major part of its power supply from hydro-electric sources.

Canada's pulp and paper industry is one of the world's great industrial enterprises. Total mill capacity for the production of newsprint paper is considerably greater than that of any other country in the world, and in total production of wood pulp Canada is second only to the United States. The fact that over 90 p.c. of the manufactured newsprint is exported gives some indication of the importance of the industry to the Canadian economy. By far the larger portion of the energy used in the pulp and paper industry is derived from water power.

Subsection 3.—Water Power Resources, Undeveloped and Developed

Table 2 presents a summary of developed water power in Canada and an estimate of undeveloped water power potential, based on records maintained by the Inland Waters Branch of the Department of Energy, Mines and Resources. Estimates of available power are shown for undeveloped sites only; for developed sites, the total generating capacity actually installed is indicated. It should be noted that the capacity installed at an existing hydro-electric development is frequently in excess of the continuous power available at the site. The relationship between installation and available power is explained on p. 664.

2.—Water Power Resources, by Province, as at Jan. 1, 1967

¹ Power equivalent of flow available 95 p.c. of the time.

³ Power equivalent of arithmetical mean flow.

² Power equivalent of flow available 50 p.c. of

Undeveloped Water Power Resources.—Table 2 gives estimates of undeveloped power based on different rates of flow: the first column indicates continuous power ordinarily available during periods of low discharge under existing conditions of river flow based on Q95, which is the natural or modified flow available 95 p.c. of the time; the second column shows dependable maximum power based on Q50, which is the natural or modified flow available for at least 50 p.c. of the time; and the third column shows dependable maximum power based on Qm, the arithmetical mean flow. On rivers for which flow records are sparse or non-existent, estimates of flow are made from available information relating to run-off in the same general area. The hydraulic head used in calculating undeveloped water power is based on the actual drop or the feasible concentration of head which has been measured or carefully estimated. Preliminary figures for Quebec supplied by the provincial Department of Natural Resources, however, reflect the net river power potential which would result from development of the entire head available on Quebec rivers whose drainage areas exceed 3,000 sq. miles.

It should be emphasized that the figures of continuous power at Q95 represent only the minimum water power possibilities in Canada because estimates are based upon existing river flow and, for the most part, do not reflect the benefits of streamflow regulation that would result from the development of storage potential. Partial regulation is required in most instances to obtain the continuous power available at Q50. On the other hand, the arithmetical mean flow figures represent the power that would be obtainable if the entire flow in the river could be regulated to provide a continuous flow of constant magnitude. It can readily be seen that, because the latter condition assumes complete regulation, estimates of potential based upon arithmetical mean flow will, if other pertinent factors are neglected, exceed the amount of capacity that might be expected to be installed at the site, particularly where little or no storage is available. However, recent experience in the development of water power sites has indicated that, in fact, the generating capacities installed at many sites are very considerably in excess of what might be dictated by even the arithmetical mean flow. Several major river-diversion possibilities exist, particularly in British Columbia. For this reason, the estimates of potential of British Columbia's undeveloped hydro resources have recently been boosted substantially, mainly because of the inclusion of figures based upon the diversion of rivers which, if they are developed at all, will almost certainly be developed on a combined-river basis.

Developed Water Power Resources.—The figures of installed generating capacity given in Table 2 are based on the manufacturer's rating in kilowatts as shown on the generator name-plate, or derived from the rating where it is indicated in kilovolt-amperes. The maximum economic installation at a power site can be determined only by careful consideration of all the conditions and circumstances pertinent to its individual development. It is usual practice, however, to install units having a combined capacity in excess of the available continuous power at Q50, and frequently in excess of the power available at Qm. There are a number of reasons for this. The excess capacity may be installed for use at peak-load periods, to take advantage of periods of high flow, or to facilitate plant or system maintenance. In some instances, storage dams have been built subsequent to initial development to smooth out fluctuations in river flows. In other cases, deficiencies in power output during periods of low flow have been offset by auxiliary power supplied from thermal plants, or by inter-connection with other plants which operate under different load conditions or are located on rivers with different flow characteristics.

Thus, the extent to which the installed capacity exceeds the available continuous power at the various rates of flow is dependent upon the factors that govern the system of plant operation, and varies widely in different areas of the country. In some developments, the difference may amount to several hundred per cent. For this reason, discretion should be used in comparing the figures in the last column with those in the preceding columns, as available continuous power and installed capacity are not direct

comparable. As a rough guide, however, it may be assumed that the power equivalent of the flow at Q50 represents an approximate, if conservative, estimate of hydro generating capacity remaining to be installed in Canada.

Provincial and Territorial Distribution.—The provincial and territorial distribution of undeveloped water power resources and installed generating capacity, given in Table 2, reveals that substantial amounts of water power have been developed in all provinces except Prince Edward Island, where water power resources are meagre. As natural resource development proceeds, the fortunate incidence of water power in proximity to mineral, forest and other resources becomes increasingly apparent. There is little doubt that the existence of large amounts of potential hydro power on northern rivers will prove to be a factor of prime importance in the eventual realization of the natural wealth of Canada's Northland.

The water power resources of *Newfoundland*, determined on the basis of the limited available streamflow data, are estimated to be of very considerable magnitude. On the island, although the length of the rivers is generally not great, topography and run-off are favourable for hydro-electric power development. Of the substantial capacity installed, a very large portion serves the pulp and paper industry. In Labrador, the Churchill River and its tributaries, now under development, constitute one of the largest potential sources of water power in Canada.

In *Prince Edward Island* there are no large streams and water power plants are limited in size to those used to operate small mills. The water power resources of *Nova Scotia* and *New Brunswick*, although small in comparison with those of other provinces, are a valuable source of energy and make a substantial contribution to the economies of the two provinces. Numerous rivers in both provinces provide moderate-sized power sites either within economic transmission distance of the principal cities and towns or advantageously situated for use in development of the timber and mineral resources. These provinces are also favoured with abundant indigenous coal supplies.

Quebec is the richest of all the provinces in water power resources, possessing more than 40 p.c. of the total recorded for Canada. Quebec also leads in developed water power, its present installation of 10,746,000 kw. representing about 47 p.c. of the national total. The largest single hydro-electric installation in Canada is the Quebec Hydro-Electric Commission's 1,574,260-kw. Beauharnois development on the St. Lawrence River; also notable are the Commission's Bersimis I development on the Bersimis River having an installed capacity of 912,000 kw., and the Aluminum Company of Canada Limited's 42,500-kw. Chute des Passes plant on the Peribonca River. A major power project which represents a significant advance in the development of Quebec's hydro-electric resources is under construction. This project, involving the harnessing of the headwaters of the Manicouagan and Outardes Rivers, will permit the eventual installation of some 800,000 kw. on the two rivers. Power production in the province is facilitated by the regulation of streamflow by the provincial Department of Natural Resources through the storage dams which it owns and operates. In 1965, some of the responsibility for regulation was transferred to the Quebec Hydro-Electric Commission.

Almost all of the sizable water power potential in *Ontario* within easy reach of demand centres has been developed and planners are looking to the more remote sites as new sources of supply. Improvements in long-distance transmission techniques have brought many of these sites within the economic orbit of demand centres. Several sites are being developed and a number of others are under investigation. Most of the hydro-electric power produced in the province comes from the generators of The Hydro-Electric Power Commission of Ontario, Canada's largest power producing and distributing organization. Ontario's largest hydro-electric generating station is located on the Niagara River at Queenston, where the Sir Adam Beck-Niagara Generating Stations Nos. 1 and 2 and the

associated pumping-generating station have a combined generating capacity of 1,804,200 kw. In addition to the power generated in its own plants, the Commission purchases large amounts of electric power generated outside the province, chiefly in Quebec.

Of the three Prairie Provinces, *Manitoba*, with immense hydro-electric capabilities on the Winnipeg, Churchill, Nelson and Saskatchewan Rivers, is the most generously endowed with water power resources. Until recently, hydro-electric generating stations on the Winnipeg River supplied most of the power requirements of southern Manitoba. Manitoba Hydro's high-voltage, long-distance transmission lines, however, will carry ever-increasing amounts of power south from hydro-electric stations on northern rivers to help meet the province's constantly growing power demands. Large water power resources exist in the central and northern parts of *Saskatchewan*, principally on the Churchill, Fond du Lac, and Saskatchewan Rivers. In 1963, power from Squaw Rapids, the first hydro development on the Saskatchewan River, was fed into the transmission network of the provincially owned Saskatchewan Power Corporation, which serves the more settled areas of the province. These areas previously had been served by electric power from thermal plants fuelled by coal, oil or natural gas, the hydro-electric power generated in the province being used almost exclusively for mining purposes in northern areas. In *Alberta*, most of the principal hydro-electric developments are located on the Bow River and its tributaries and, from these developments, Calgary Power Ltd. serves most of the southern part of the province. In 1965, energy from a large hydro-electric unit on the Brazeau River in the headwaters of the North Saskatchewan River came on line, augmenting the energy from the Bow River plants. Substantial water power resources are located in the northern regions and, although these are somewhat remote from present centres of population, the advent of extra-high-voltage transmission has enhanced the prospect of their development.

British Columbia has many mountain streams that offer abundant opportunity for the development of hydro-electric power. In terms of recorded available water power resources, developed and undeveloped, the province ranks second in Canada and is exceeded only by Quebec and Ontario in the amount of generating capacity installed. Notable for the magnitude of their power potential are such rivers as the Columbia, the Fraser, the Peace and the Stikine. Up to the present time, however, hydro-electric developments on smaller rivers in the southern areas have satisfied the major load requirements of the province but now the immense power resources of the Peace River are in process of being harnessed and by 1968 will supplement the energy supply. Development of the Columbia River, now well under way, is designed to provide initially three huge storage reservoirs and eventually to make available a significant amount of 'at site' power in the Canadian portion of the basin. The foremost producer and distributor of electric power in British Columbia is the provincially owned British Columbia Hydro and Power Authority.

Power from present developments in the *Yukon Territory* and the *Northwest Territories* is used almost exclusively to satisfy the needs of local mines and adjacent settlements. Owing to the lack of developed native fuel sources and to transportation difficulties, water power is of special importance in the development of mining areas, such as Mayo in the Yukon Territory and Yellowknife in the Northwest Territories. The Northern Canada Power Commission, a federal Crown corporation (see p. 148), is responsible for the construction and management of public utility plants. In Yukon Territory, most of the resources are located on the Yukon River and its tributaries. The possibility exists of diverting the headwaters of the Yukon River through the Coast Mountains to utilize a high head near tidewater in northern British Columbia but such a development would affect adversely the potential of sites on the main river. Resources in the Northwest Territories have not been surveyed to the same extent as those in Yukon Territory but they are nevertheless known to be of considerable magnitude, particularly on rivers flowing into Great Slave Lake. Of major significance, as well, is the hydro-electric potential of the South Nahanni River, which drains to the Mackenzie River via the Liard

River. On the basis of preliminary investigations, it is estimated that, with total regulation and complete use of the head susceptible of development, the hydro-electric potential of the South Nahanni River would be close to 1,000,000 kw. Indications are that the rivers draining the District of Keewatin, north of Manitoba, could also contribute materially to the total power potential of the Northwest Territories.

Subsection 4.—Thermal Power Generation

The incidence of immense water power resources in Canada and the brisk pace of their development has tended to overshadow the very considerable contribution being made by thermal energy in the nation's power economy. At the end of 1966, the total installed thermal capacity in Canada was 8,704,000 kw., about 28 p.c. of the total electric generating capacity in the country. The fact that energy produced in thermal plants during the year accounted for only 18 p.c. of the total may be attributed in part to the fact that a considerable amount of the capacity installed is maintained for stand-by purposes. Emphasis on thermal plant construction is likely to become more marked as development of the nation's water power reserves becomes more complete.

Conventional Thermal Power.—Approximately 85 p.c. of all of the conventional thermal power generating equipment in Canada is driven by steam turbines. The magnitude of the loads being carried by steam plants has led to the installation of steam units with capacities as high as 300,000 kw. Even larger units, of 500,000-kw. capacity, will go into service within the next two or three years. The remainder of the load is carried by gas turbine and internal combustion equipment. The flexibility of internal combustion engines makes this type of equipment particularly suitable for meeting power loads in smaller centres, especially in the more isolated areas.

Table 1 (p. 660) shows that the Provinces of Prince Edward Island, Nova Scotia, Saskatchewan and Alberta depend on thermal capacity for most of their power requirements and that New Brunswick has slightly more thermal than hydro. For Ontario, where hydro capacity is now about twice the thermal, forecasts based on present construction schedules indicate that by the early 1970s total installed thermal capacity will have overtaken hydro.

With the exception of several large plants in St. John's and Grand Falls, most of the thermal-electric capacity in Newfoundland is made up of relatively small units used to supply power to small, often isolated communities. With the wealth of water power readily available in the province, it is not likely that Newfoundland will have need for large thermal stations for some time to come. In Prince Edward Island, almost all the generating capacity is oil-fuelled; in Nova Scotia, most of the energy generated in thermal-electric utility plants is derived from coal and the remainder from petroleum fuels; and in New Brunswick petroleum fuels provide slightly more than half of the thermal-electric energy.

The abundance of Quebec's water power wealth, much of it within economic transmission distance of existing demand areas, has so far limited the application of thermal power to specific local use. However, the growing emphasis on thermal power in other parts of Canada is also beginning to be apparent in Quebec, where thermal capacity will serve not only to help guarantee an adequate power supply in the face of increasingly heavy demands but also to render the almost exclusively hydro-electric base more flexible through integrated operation. Quebec's largest thermal plant, the 300,000-kw. Tracy Station near Sorel, was doubled in generating capacity in 1967. Quebec's first nuclear station, on the south shore of the St. Lawrence River between Gentilly and Bécancour, is scheduled for service in 1971 with 250,000 kw. of electric generating capacity.

Ontario has more thermal capacity than any other province in Canada; capacity installed at the end of 1966 totalled 3,922,836 kw., which was about 45 p.c. of the national total. The 2,900,000 kw. of conventional thermal capacity and 1,080,000 kw. of nuclear thermal capacity scheduled for service in the period 1967-71 will increase considerably

this province's share of the national total. Canada's largest thermal station is Ontario Hydro's Lakeview generating station at Toronto, which has a capacity of 1,500,000 kw. made up of five 300,000-kw. units, the largest in operation in Canada. This station will be expanded to 2,400,000 kw. by 1968. Four units of 500,000-kw. capacity are planned for the Lambton station near Sarnia, installation of which will be completed in 1971.

Manitoba supplements its predominantly hydro-based power supply with a substantial amount of thermal capacity but current emphasis is on development of water power resources. Saskatchewan, until recently, has relied on thermal capacity to satisfy the needs of the more settled areas and hydro-electric power generated in the province has been used almost exclusively for mining purposes in the northern areas. In the past few years, however, development of storage on the South Saskatchewan River has made hydro-electric power available in the southern part of the province and plans for expanding the province's thermal capacity are limited for the present to a proposed extension to the 132,000-kw. Boundary Dam thermal station. The incidence of vast fuel resources accounts for the emphasis on thermal power generation in Alberta; the province's largest thermal plants are the 405,000-kw. gas turbine and steam station at Edmonton and the 282,000-kw. Wabamun steam station.

More than half of British Columbia's thermal generating capacity is installed in three plants located in the Vancouver area. The capacity of the largest of these plants, the 486,000-kw. Burrard generating station, is expected to be increased to 810,000-kw. by 1968.

Until recently, most of the power requirements of the Northwest Territories were satisfied from thermal sources but the commissioning of the Twin Gorges hydro station on the Taltson River in 1965 altered the balance in favour of hydro. In Yukon Territory, hydro is the larger contributor. Most of the thermal-electric energy in the Territories is generated by small diesel units.

Nuclear Thermal Power.—Commercial electric power generated from the heat of nuclear reaction became a reality in Canada in 1962 when the 20,000-kw. Nuclear Power Demonstration station at Rolphton, Ont., fed power for the first time into a distribution system in Ontario. The NPD station is the forerunner in a series of large nuclear stations that will shoulder more and more of Canada's rapidly growing power loads.

Research into reactor design and the application of nuclear energy in the electric power field are among the more important responsibilities of Atomic Energy of Canada Limited, a Crown company incorporated in 1952 (see also pp. 411-416). AECL has concentrated its efforts on the development of the CANDU reactor, which uses natural uranium as a fuel and heavy water as the moderator. By using heavy water as the moderator, a high energy yield can be obtained from natural uranium and, since natural uranium is a low-cost nuclear fuel, the cost of fuel is a minor component in the cost of producing power. Natural uranium has the added attraction of being available in commercial quantities in Canada.

The Canadian nuclear power reactor also offers the simplest of nuclear fuel cycles. Sufficient energy can be extracted from the fuel so that the economics of the system do not require a value to be placed on the spent fuel. There is, therefore, no need to carry out costly chemical processing of the spent fuel unless the worth of the remaining contained fissile material becomes sufficiently high to make chemical processing an economic proposition. The spent fuel is an ideal package for simple underwater storage and no large volume of highly radioactive liquids from a chemical processing plant has to be handled and contained.

The NPD station has been used extensively to demonstrate the ability of the system to operate at a high capacity factor and to determine the nature and predictability of outages. Fuel changes while the system is in operation have become routine and a considerable amount of research into the sources of heavy water losses has been carried out. As a result of this research, losses have been cut down and the NPD station is demonstrating that a very acceptable heavy water loss rate is attainable.

At Douglas Point on the shore of Lake Huron, the country's first full-scale nuclear power station went into commercial production at the end of 1966. The station, built with the co-operation of Ontario Hydro, houses a 200,000-kw. CANDU reactor. Experience gained in the design and operation of this reactor has encouraged the development of even larger units and construction of the two-unit, 1,080,000-kw. Pickering nuclear station is under way near Toronto, with in-service dates for the two units scheduled for 1970 and 1971.

A further step in the development of the CANDU reactor is the use of boiling light water instead of pressurized heavy water as the coolant. This change offers further reductions in unit energy costs. Quebec's proposed Gentilly nuclear station on the south shore of the St. Lawrence River near Trois-Rivières will utilize boiling light water in its CANDU reactor. This station is scheduled for service in 1971 with 250,000 kw. of nuclear-electric capacity.

Subsection 5.—Electric Power Transmission

The nature of the loads handled by the small, widely scattered generating systems in the early days of the electric power industry in Canada did not warrant the expense of interconnecting power systems. However, as the demand for dependable electric power increased and improved techniques reduced power transmission costs, the benefits of integrating power systems to achieve reliability of service and flexibility of operation were re-appraised.

The number of amalgamations of small systems into larger operating groups has increased steadily and today most of Canada's generating stations are components of large, integrated and often interconnected power systems operated by power utilities and companies in the various provinces.

Constant research in the field of power transmission has developed techniques that enable power producers to develop hydro-electric sites previously considered beyond economic transmission distances. Most noticeable, perhaps, is the progressive stepping up of transmission line voltages. In Canada, there are a number of transmission lines designed for operation at 500,000 volts. A 574-mile, 500,000-volt line is being constructed to carry power from the Peace River to the lower mainland of British Columbia. In Ontario, a 435-mile, 500,000-volt line was completed in 1966 from hydro-electric plants in the James Bay watershed to Toronto. In 1965, power was carried for the first time at 35,000 volts when the 375-mile transmission line between Quebec's Manicouagan-Outardes hydro complex and the cities of Quebec and Montreal went into operation.

Although at present power is transmitted exclusively as alternating current (a.c.), Canadian producers are considering the advantages of carrying power at high voltages over long-distance direct current (d.c.) lines. One such transmission line with a rating of $\pm 260,000$ volts is expected to be placed in service in 1968 to augment an existing a.c. line between Vancouver Island and the mainland.

The search for economies in transmission systems has led to changes not only in materials used but also in tower erection and cable-stringing methods. Guyed aluminum T-shaped and Y-shaped transmission towers are being used increasingly in place of self-supporting towers where the terrain is suitable, and erection costs are being reduced by the use of helicopters to transport tower sections to the site and for tower assembly. The use of helicopters for spraying in brush control on the right-of-way and for line inspection and maintenance is becoming more widespread.

At present, domestic interconnections of from 66,000 volts to 230,000 volts exist between systems in Alberta and British Columbia; Saskatchewan, Manitoba and north-western Ontario; the interconnected northeastern and southern Ontario systems and Quebec; and between New Brunswick and Nova Scotia. Important international interconnections exist between British Columbia and the State of Washington; Ontario and the State of Michigan; Ontario and the State of New York; Quebec and the State of New York; and New Brunswick and the State of Maine.

Section 2.—Progress in Construction of Generating Facilities, 1966

During 1966, Canada's electric power generating capacity increased by 1,922,000 kw.: thermal capacity, which includes nuclear electric, accounted for 1,059,000 kw.; and the remaining 863,000 kw. was installed in hydro plants. In terms of the amount of generating capacity installed in one year in Canada, 1966 ranks third; the years of greater installation were 1959 and 1965 when 2,500,000 kw. and 2,200,000 kw., respectively, were placed in service. The new capacity placed in service in 1966 raised Canada's total generating capacity to 31,400,000 kw., consisting of 22,700,000 kw. hydro and 8,700,000 kw. thermal.

Present estimates indicate that more than 2,350,000 kw. of new generating capacity will go into service during 1967, 1,600,000 kw. thermal and 750,000 kw. hydro. Including the capacity scheduled for 1967, Canada's power producers have under construction or have scheduled within the next few years a total of 23,300,000 kw. of new capacity 13,900,000 kw. hydro and 9,400,000 kw. thermal.

Newfoundland.—In Newfoundland, construction of 39,908 kw. of new thermal generating capacity was completed before the end of 1966 and construction of 559,000 kw. of hydro-electric generating capacity was continuing. Of great significance was the announcement, late in 1966, of the start of construction of some 4,500,000 kw. of hydro electric capacity on the Churchill River in Labrador.

The capacity brought into service in 1966 consisted principally of a 25,000-kw. gas turbine unit installed at the Bowater Power Company's plant in Corner Brook and a 12,500-kw. unit at the new Holyrood gas-turbine plant of the Newfoundland and Labrador Power Commission. Construction on the Commission's Bay d'Espoir hydro development continued during 1966 with 229,500 kw. of hydro-electric capacity scheduled for service in 1967 and a further 229,500 kw. later. Construction plans by the Churchill Falls Power Corporation Limited for the 4,500,000-kw. Churchill River hydro station calls for power from the first units to be available in 1971-72 and installation of other units as demand for power increases; this station, when completed, will be one of the world's largest hydro developments.

Nova Scotia.—In Nova Scotia, electric generating capacity totalling 36,000 kw. was commissioned in 1966, 27,750 kw. is expected to come into service in 1967 and another 230,000 kw. is proposed for installation later.

The capacity of the Nova Scotia Power Commission's Glace Bay thermal plant on Cape Breton Island was boosted to 108,000 kw. in 1966 following installation of a 36,000 kw. unit. In 1967, the capacity of the Commission's Weymouth Falls hydro plant on the Sissiboo River will be doubled by the addition of a 9,000-kw. unit, and Scott Maritime Pulp Limited will begin operation of its new single-unit 18,750-kw. thermal plant at Abercrombie Point. Proposed for installation subsequent to 1967 at the Commission's Trenton and Point Tupper thermal plants are units of 150,000 kw. and 80,000 kw., respectively.

New Brunswick.—New Brunswick's total electric generating capacity was increased by 110,000 kw. in 1966, 110,500 kw. remained under construction for service in 1967 and another 1,100,000 kw. is either planned or under construction for completion later.

A 110,000-kw. unit at the New Brunswick Electric Power Commission's Courtenay Bay thermal plant was brought into service in 1966, raising the plant's capacity to 173,000 kw.; another 110,000-kw. unit is scheduled for initial service at the Courtenay Bay plant in 1967. At the Commission's Mactaquac hydro-electric development on the St. John River, six 100,000-kw. units are being installed, the first unit to be in service about the end of 1967, the second and third in 1968 and the other three by 1976. The Commission has completed site surveys for a new thermal plant at Dalhousie; ultimate capacity will be 500,000 kw. with the first of five units to be in service by late 1967. A 500-kw. unit for the Commission's Milltown hydro development on the St. Croix River was being installed for service in 1967.

Quebec.—In 1966, Quebec's extensive program of power-plant construction added 404,040 kw. of new capacity to the province's already considerable total of almost 11,000,000 kw. The new capacity is all hydro-electric. A total of 562,870 kw. of new capacity is scheduled for 1967, 300,000 kw. of which will be thermal and 262,870 kw. hydro. On the basis of present scheduling, nearly 5,000,000 kw. of new capacity, most of it hydro, should come into service in Quebec during the years 1968-74.

One of North America's most spectacular engineering projects, the harnessing of the power potential of the Manicouagan and Outardes Rivers, went ahead on schedule during 1966. The project involves the construction of seven hydro plants on the two rivers and the installation of additional capacity at an existing station. The total amount of new generating capacity to be made available by the Manicouagan-Outardes project will be in excess of 5,500,000 kw. Manic 2, eleven miles from the mouth of the Manicouagan River, went into operation in 1965 with 635,000 kw. of generating capacity in five units; two more units were installed in 1966, increasing the plant generating capacity to 888,300 kw. A final unit is scheduled for installation in 1967. Manic 1 went into service in 1966 with two units, each rated at 61,470 kw.; a third unit will complete the development in 1967. The largest development in the Manicouagan-Outardes hydro complex is Manic 5, designed for a total generating capacity of 1,344,000 kw. in eight units. When completed, the buttressed, multi-arch dam at Manic 5 will be over 4,000 feet long and 703 feet high at the highest point above bedrock and will be one of the highest and most massive dams of its kind in the world. First power is expected in 1970 and completion of the plant in 1972. Last of the new Manicouagan plants to come into service in the current program will be Manic 3, with a total generating capacity of 1,120,000 kw. in seven units; initial service is scheduled for 1972 and completion of the plant for 1974.

On the Outardes River, power at Outardes 4 will be generated by four 158,000-kw. units, the first three of which will be in service in 1968 and the fourth in 1970. The dam at Outardes 4 will create a reservoir with a surface area of more than 250 sq. miles. The underground powerhouse planned for Outardes 3 will house four 189,000-kw. units; three are scheduled for initial operation in 1968 and the fourth in 1969. The Outardes 2 plant, adjacent to the existing Outardes Falls station, is scheduled to go into service in 1970 with a total capacity of 447,000 kw. in three units.

Elsewhere in the province, Quebec Hydro is developing two sites on the Quinze Rapids reach of the Upper Ottawa River to supply power to the rapidly developing north-western region. The Rapides des Îles plant is designed for four 37,250-kw. units; one unit was installed in 1966 and two are scheduled for 1967, with development of the fourth dependent upon the magnitude of local power demands. The First Falls plant is designed for 120,000 kw. in four units, one to be installed each year from 1968 to 1970 and the fourth at a later unscheduled date.

The capacity of Quebec's first large thermal station, the Tracy plant near Sorel, will be increased in 1967 by the addition of two 150,000-kw. units, bringing the station capacity to 600,000 kw.

Construction of Quebec's first nuclear generating plant rated at 250,000 kw., began in 1966. The Gentilly nuclear station, being built by Atomic Energy of Canada in co-operation with Quebec Hydro, is located at Pointe aux Roches on the south shore of the St. Lawrence River and is scheduled for completion in 1971.

Ontario.—In 1966, Ontario's electric generating capacity was increased by 818,640 kw.; 783,900 kw. will be brought into operation in 1967 and another 5,760,000 kw. is planned or under construction for service in later years. Most of the new capacity is thermal-electric.

During 1966, the power development program of The Hydro-Electric Power Commission of Ontario involved construction on five hydro-electric stations, six conventional thermal stations and two nuclear-electric plants. The Commission's Kipling hydro station on the Mattagami River began operation in 1966 with a generating capacity of 25,400 kw. At the Mountain Chute hydro site on the Madawaska River, two units,

each rated at 69,750 kw., are scheduled for service in late 1967. Additional generating capacity was being installed at Barrett Chute and Stewartville Stations on the Madawaska River downstream from Mountain Chute; by 1969, two additional 55,800-kw. units at Barrett Chute will bring that station's capacity to 151,400 kw., and two 45,900-kw. units at Stewartville will increase the station's capacity to 153,000 kw. Construction of the Aubrey Falls hydro station on the Mississagi River started in 1966; the station's two 80,000-kw. units are scheduled for completion in 1969.

At Lakeview generating station on the shore of Lake Ontario near Toronto, installation of the fifth 300,000-kw. steam unit was completed in 1966. The ultimate capacity of Lakeview, to be realized in 1968, will be 2,400,000 kw. in eight units. The Lambton station, on the St. Clair River about 14 miles south of Sarnia, will house four 500,000-kw units to come into service at the rate of one a year between 1968 and 1971. Ontario Hydro installed a number of combustion turbine generators in southern Ontario to serve as standby units and contribute to the provision of an adequate margin of reserve capacity at times of peak load, particularly during the present period of rapid load growth. Site investigations for a proposed coal-fired thermal-electric station are being carried out on the north shore of Lake Erie, the schedule for the new station calling for four 500,000-kw units to be installed between 1972 and 1977.

In the nuclear-electric field, installation of the 200,000-kw. CANDU unit at Douglas Point was completed late in 1966 and work continued on the Pickering nuclear-electric station. At Pickering, two 540,000-kw. units are scheduled for initial operation in 1970 and 1971, and at least two other identical units are expected to be installed later.

Manitoba.—Manitoba's electric generating capacity remained unchanged in 1966; however, 26,000 kw. of new generating capacity will be installed in 1967 and another 1,241,000 kw. in later years.

Most of the new capacity will be installed on the Nelson River as a result of an agreement signed by the Governments of Manitoba and Canada. The agreement calls for construction of a hydro plant at Kettle Rapids, diversion of flow from the Churchill River into the Nelson River near Thompson, regulatory facilities at the outlet of Lake Winnipeg and transmission facilities from the Kettle Rapids site to Winnipeg. Capacity of the Kettle Rapids plant will be approximately 1,000,000 kw., of which 400,000 kw. is expected to be in service by 1971. To accommodate the anticipated demand for power before completion of the Kettle Rapids project, the capacity of Manitoba Hydro's Brandon and Selkirk thermal stations will be increased by 105,000 kw. and 26,000 kw., respectively. The Grand Rapids hydro-electric station on the Saskatchewan River will be complete in 1968 when the fourth and final unit of 109,250 kw. is installed.

Saskatchewan.—In Saskatchewan, electric power generating capacity increased by 92,800 kw. in 1966, 77,400 kw. of which was hydro-electric capacity and 15,400 kw. thermal capacity. Although no new capacity is scheduled for 1967, 186,600 kw. of hydro capacity and 330,800 kw. of thermal capacity are planned or under construction for installation in subsequent years.

The bringing into service of two 38,700-kw. units in 1966 completed Saskatchewan Power Corporation's 278,400-kw. Squaw Rapids hydro-electric plant on the Saskatchewan River. Also, a 15,400-kw. gas-fired unit was brought into service at the Corporation's Success thermal plant near Swift Current. Two 150,000-kw. steam turbines will be added at the Boundary Dam thermal plant at Estevan, scheduled for service in 1969 and 1970. At the South Saskatchewan River Project near Outlook, three 62,200-kw. generators will be in service by 1968; the Prairie Farm Rehabilitation Administration is building the dam and reservoir primarily for irrigation purposes and the Saskatchewan Power Corporation is installing the hydro-electric generating facilities.

Alberta.—Alberta's total installed electric generating capacity increased by 303,650 kw. in 1966—172,750 kw. in hydro-electric plants and 130,900 kw. in thermal plants.

It is estimated that 330,500 kw. of new thermal capacity will be installed in 1967 and another 780,000 kw. is scheduled for subsequent years.

A 161,500-kw. hydro-electric unit, at present the largest in Canada, went into service in 1966 at the Big Bend development of Calgary Power Ltd., raising the capacity of the plant to 305,500 kw. At the pumping station associated with the Big Bend plant, a pumping-generating unit with a generator rating of 11,250 kw. was installed in 1966, increasing the total generating capacity to 20,970 kw. in two units. The Company's Wabamun thermal plant is being extended to house a new 300,000-kw. coal-burning unit which, in 1967, will boost the plant capacity to 582,000 kw. A similar unit is under consideration for commissioning in 1970. Canadian Utilities Limited installed a 20,000-kw. gas-turbine unit at Simonette in 1966, and is installing a 150,000-kw. coal-fired unit for service in 1969 at the Battle River thermal plant near Forestburg. The City of Edmonton commissioned a 75,000-kw. gas-fired steam turbo-generator at its Edmonton thermal plant in 1966 and plans to build a new plant consisting of two 165,000-kw. gas-fired units for service in the early 1970s.

British Columbia.—British Columbia's electric generating capacity increased by 114,520 kw. in 1966, and a further 304,100 kw. is scheduled for service in 1967. New installations scheduled for operation after 1967 will yield almost 2,500,000 kw.

In 1966, Cominco Ltd. completed the installation of the fourth and final unit at Waneta hydro-electric station on the Pend d'Oreille River; the new unit, rated at 76,000 kw., increases the station capacity to 292,000 kw. A 34,560-kw. turbo-generator was installed by Columbia Cellulose Company Limited to produce electric power from process steam for the bleached-craft mill at Watson Island near Prince Rupert. Installation of the fourth 162,000-kw. unit at the British Columbia Hydro and Power Authority's Burrard thermal station will be completed in 1967, raising the total generating capacity of the station to 648,000 kw. During 1967, MacMillan, Bloedel and Powell River Limited will install a 40,000-kw. steam turbo-generator at the 14,925-kw. Powell River plant, and the capacity of Alcan's Kemano hydro-electric station will be boosted to 812,800 kw. with the addition of an eighth unit rated at 105,600 kw.

Substantial progress in construction on the British Columbia Hydro and Power Authority's Portage Mountain development on the Peace River was reported in 1966. The development is planned for ten units with a total capacity of 2,270,000 kw., three of which are scheduled for service by the autumn of 1968. Work progressed on the three storage dams being built by the Power Authority under the terms of the Columbia River Treaty which entitles Canada to one half of the power benefits accruing in the United States from the regulation of 15,500,000 acre-feet of water to be stored in Canada behind the Duncan, Arrow and Mica Dams and one half of the value of the estimated flood damage prevented in the United States through the operation of the dams for flood control. The three storage dams are required by the Treaty to be in operation in 1973.

Yukon and Northwest Territories.—In 1966, a net total of 1,340 kw. of new thermal capacity was added at various locations in the Yukon Territory and 750 kw. in the Northwest Territories. Some 7,100 kw. of new thermal capacity will begin operation in 1967 and at least 8,000 kw. (possibly as much as 16,000 kw.) of hydro capacity proposed for installation during 1968-70.

Section 3.—Power Generating Capability and Load Requirements

Power generating *capability*, as covered in this Section, is the measurement of the available generating resources of all hydro and thermal facilities at the time of the one-hour peak load for each reporting company, and is not equal to the *capacity* of such generating facilities. For example, a hydro plant may have a capacity of 100,000 kw. but if, at the time of peak load, the water available for generation is only 80 p.c. of the plant capacity requirements, then its capability is 80,000 kw.

Total generating capability has grown at a rapid rate since 1956. The annual rate of increase was 6.8 p.c. in the ten-year period 1956-66 and 4.9 p.c. in the four-year period 1962-66. In comparison, the forecast rate of growth for the years 1967-71 is 8.6 p.c.; thermal generating capability is expected to grow at an average rate of 15.2 p.c. a year in the forecast period compared with 13.3 p.c. in the period 1956-66, and hydro-electric capability is expected to increase at 5.9 p.c. a year compared with 5.3 p.c. in the 1956-66 period. This rate of growth in hydro generating capability in the forecast period is attributable to the large power projects under construction in relatively remote areas which will be completed within the next few years (see pp. 670-673).

Among the provinces, Quebec has the largest generating capability, followed by Ontario, British Columbia and Alberta. Quebec also has the largest hydro-electric generating capability, followed by Ontario and British Columbia, but Ontario has the largest thermal capability, followed by Alberta and British Columbia. The first nuclear power station went into commercial operation in Ontario in late 1966.

The largest absolute growth in generating capability for the forecast years is indicated for Ontario at 5,322,000 kw., followed by Quebec at 3,668,000 kw., British Columbia at 2,073,000 kw. and Alberta at 1,121,000 kw. Ontario will meet most of its increased generating capability by adding 4,814,000 kw. in thermal capability and 508,000 kw. in hydro capability, the former including 1,200,000 kw. nuclear. Quebec will add 3,327,000 kw. hydro and 341,000 thermal and British Columbia 1,706,000 kw. hydro and 367,000 kw. thermal.

Firm power peak load is the measure of the maximum average net kilowatt demand of one-hour duration from all loads, including commercial, residential, farm and industrial consumers as well as the line losses. Such load demand increased at the rate of 6.6 p.c. a year from 1956 to 1966 and 8.2 p.c. a year from 1962 to 1966; peak load demand is forecast to increase at the average rate of 7.1 p.c. a year in the period 1967-71. As a result of the rapid increase in generating capability and the somewhat slower but steady increase in the peak loads, together with the slight reduction in deliveries of firm power to the United States, the indicated reserve on net generating capability in the 1956-66 period increased each year from 1956 to 1960 and in 1962 and 1965. The forecast is for increases from 1967 to 1971 with the exception of 1968. The reserve ratio as a percentage of firm power peak load reached a high of 28.2 p.c. in 1960 and fell to 11.4 p.c. in 1966 but is expected to increase to 19.1 p.c. in 1971.

3.—Net Generating Capability, by Province, 1966

(Thousand kilowatts)

Section 4.—Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy that they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back to 1956. Earlier reports, entitled *Central Electric Stations*, were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

5.—Electric Energy Generated, by Type of Station, 1957-66, and by Province 1965 and 1966

Year and Province or Territory	Generated by—		Total	Year and Province or Territory	Generated by—		Total

Of the total generation in 1966 of 158,135,232,000 kwh., 82.1 p.c. was produced from water power and 17.9 p.c. was generated thermally; the proportions differed markedly among provinces as shown in the following statement.

Province	Hydro	Thermal	Province or Territory	Hydro	Thermal
	p.c.	p.c.		p.c.	p.c.
Newfoundland.....	89.0	11.0	Manitoba.....	97.8	2.2
Prince Edward Island....	0.2	99.8	Saskatchewan.....	42.8	57.2

Quebec.....	99.1	0.9	Yukon and Northwest Territories.....	84.2	15.8
Ontario.....	76.2	23.8			

Table 6 gives summary figures of power production and distribution classified by province, and Tables 7 and 8 give figures classified by type of production establishment. Total installed capacity in Canada amounted to 30,765,024 kw. in 1966, an increase of 1,417,243 kw. over 1965. Of the 1966 total, 25,755,009 kw. were accounted for by utilities and the remainder by industrial establishments. During 1965 and 1966, total sales to ultimate customers amounted to 90,846,706,000 kwh. and 99,773,839,000 kwh., respectively, of which 99.2 p.c. and 99.8 p.c., respectively, was sold by utilities.

Sales to power customers excluding sales to industrial establishments with generating facilities made up 51.5 p.c. of the total in 1965 and 52.1 p.c. in 1966, sales to domestic and farm customers were 32.8 p.c. and 32.2 p.c., respectively, and commercial sales 14.6 p.c. in both years. Exports to the United States in 1966 amounted to 4,397,333,000 kwh. compared with 3,684,121,000 kwh. in 1965.

6.—Summary Electric Power Statistics, by Province, 1965 and 1966

Average domestic and farm consumption rose from 5,630 kwh. in 1965 to 5,911 kwh. in 1966. Among the provinces, the averages in 1966 varied from a low of 2,559 kwh. in Prince Edward Island to a high of 7,637 kwh. in Manitoba. For domestic and farm customers the average annual bill was \$83.43 in 1966 as against \$80.44 in 1965, an increase of 3.7 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from 7,045 kwh. per customer in 1965 to 7,720 kwh. in 1966 and the average bill from \$125.80 to \$134.22.

Section 5.—Public Ownership and Regulation of Electrical Utilities

Federal Government regulation of electrical utilities, particularly with respect to the export of electric power and the construction of lines over which such power is exported, falls within the jurisdiction of the National Energy Board established in November 1959 and concerned with all matters relating to energy resources within the jurisdiction of the Parliament of Canada (see Domestic Trade Chapter XXI, Part II, Section 4 for an outline of the functions and operations of the National Energy Board).

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 8, p. 679, giving statistics by type of establishment, shows that 68 p.c. of the total electric power generated in 1965 was produced by publicly operated utilities, 9 p.c. by privately operated utilities and 23 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output at one time was predominantly from privately owned plants and in Ontario almost all electric power is produced by a publicly owned utility. Figures for 1962 and subsequent years will show a much greater proportion of publicly operated electrical utilities since they will reflect the recent provincial take-over of privately owned facilities in both British Columbia and Quebec.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. Neither Newfoundland nor Prince Edward Island has a provincially operated electric power system, although in the former province a Commission, known as the Newfoundland and Labrador Power Commission, was established by the provincial government in 1954 for the purpose of supplying electric power wherever needed throughout the province, particularly to rural areas. In Prince Edward Island, the town of Summerside and surrounding area is served by the municipally operated Town of Summerside Electric Light Department. The functions and activities of provincially operated electric power commissions in the other provinces are summarized in the following paragraphs.

Nova Scotia.—With total fixed assets of \$123,770,097, including \$22,705,033 worth of work in progress, the self-supporting Nova Scotia Power Commission is one of the largest businesses in the province, employing nearly 1,000 people. The Commission was created under the Power Commission Act of 1919 to exploit the limited but useful hydro potential of the province, as investigated by the Water Power Commission of 1915. The first objective was to develop remote sites to supply power and energy at lowest possible cost to new industry, particularly pulp and paper operations, and a few centres of population. The 1937 Rural Electrification Act, however, provided equalization grants and made it possible to carry out the formidable task of bringing power and energy to low-density farm and rural village areas. In the past 30 years the picture has changed markedly, with a progressive industrial climate providing both a stable base and strong opportunities for growth. The Commission's power development program, as at Dec. 31, 1966, is outlined on p. 670.

Today, more than 5,680 miles of transmission and distribution lines conduct the energy generated by about 300,000 kw. capability in 26 stations to and from every corner of Nova Scotia. Hydro power now constitutes only a fraction of base load, although it is out to optimum use for peaking purposes. Economical thermal power has risen greatly in importance during the past 10 years and holds most of the answers for the future—with the possible exception of Bay of Fundy tidal power.

New Brunswick.—The New Brunswick Electric Power Commission was incorporated under the Electric Act, 1920. Generating stations owned by the Commission at Mar. 31, 1967 were as follows:—

<i>Plant</i>	<i>Type</i>	<i>Capacity</i>	<i>Plant</i>	<i>Type</i>	<i>Capacity</i>
		kw.			kw.
Grand Falls.....	Hydro	63,000	Grand Lake.....	Steam	101,250
Musquash.....	Hydro	6,960	Saint John (Dock St.)..	Steam	16,000
Tobique.....	Hydro	20,000	Chatham.....	Steam	32,500
Beechwood.....	Hydro	112,500	Grand Manan.....	Diesel	2,350
Milltown.....	Hydro	3,036			
Sisson.....	Hydro	10,000			
Courtenay Bay.....	Steam	173,365			
			TOTAL CAPACITY.....		540,961

All the above generating units with the exception of Grand Manan are interconnected in a province-wide grid system. The statistical information given in Table 12 shows the growth of the Commission's undertakings since 1963. Power plant construction under way in New Brunswick during 1966 is outlined at p. 670.

Quebec.—*Stream and Reservoir Control.*—The Quebec Streams Commission was created in 1910 (SQ 1910, c. 5) and given additional powers in 1912 (RSQ 1925, c. 46) and 1930 (SQ 1930, c. 34); it was authorized to ascertain the water resources of the province, to make recommendations regarding their control and to construct and operate certain storage dams to regulate the flow of streams. On Apr. 1, 1955, the Commission was abolished and its powers and attributions transferred to the Hydraulic Resources Department, now the Department of Natural Resources. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable and the Métis. The Commission also operated nine reservoirs on the North River, two in the watershed of the Ste. Anne de Beupré River and one at the outlet of Lake Morin on Rivière du Loup (lower). In 1965, eleven auxiliary reservoirs on the St. Maurice System and two on the Gatineau were turned over by the Department of Natural Resources to the Quebec Hydro-Electric Commission for operation and maintenance.

Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River controlled by the Aluminum Company of Canada; the Onatchiway on the Shipshaw River controlled by Price Brothers and Company Limited; Memphremagog Lake on the Magog River controlled by the Dominion Textile Company; and Témiscamingue and Quinze Lakes on the Ottawa River controlled by the federal Department of Public Works. Storage reservoirs under the

control of the Quebec Hydro-Electric Commission are: Témiscouata Lake on the Mada-
waska River, Kipawa Lake on the Ottawa River, Lac Dozois on the upper Ottawa River,
Lac Cassé in the Bersimis River watershed and Lac Ste. Anne on the Touloustouc River,
tributary of the Manicouagan River.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was
established in 1944 (SQ 1944, c. 22) for the purpose of supplying power to the municipalities,
to industrial and commercial undertakings and to citizens of the Province of Quebec at the
lowest rates consistent with sound financial administration. On May 1, 1963, the Com-
mission acquired control of the following privately owned electrical utilities operating in
the Province of Quebec: the Shawinigan Water and Power Company, the St. Maurice
Power Corporation, the Quebec Power Company, the Southern Canada Power Company,
the Gatineau Power Company, the Northern Quebec Power Company, the Saguenay
Electric Company, and the Lower St. Lawrence Power Company. As a result of these
transactions, all electricity production, except for facilities operated by certain industrial
organizations in their own manufacturing operations, was brought under the control of a
single authority. The services of the Commission now cover virtually the entire province
except for local distribution of small amounts of electricity by some municipalities, most
of which is purchased from the Commission or its subsidiaries.

At the end of 1966 Hydro-Quebec and its subsidiaries had in operation 57 hydro-
electric stations (nine of which were under construction) having a capacity of 7,417,501 kw.,
and 14 thermal-electric stations (one of which was being enlarged) having a capacity of
15,743 kw.—a total capacity in operation of 7,763,244 kw. These facilities permit the
balanced distribution of power throughout Quebec and the most efficient use of the water
power resources of the province. Power plant construction under way in Quebec during
1966-67 is outlined at p. 671.

Ontario.—The Hydro-Electric Power Commission of Ontario is a corporate entity,
self-sustaining public enterprise endowed with broad powers with respect to the supply
of electricity throughout the Province of Ontario. Its authority is derived from an Act
of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier

advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (RSO 1960, c. 300, as amended). The Commission may have from three to six members, all of whom are appointed by the Lieutenant-Governor in Council. Two commissioners may be members of the Executive Council of the Province of Ontario.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power supply facilities, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, the province has materially assisted the development of agriculture by contributing under the Hydro-Electric Distribution Act toward the capital cost of extending rural distribution facilities.

The entire provincial area served is regarded for financial and administrative purposes as a unit, but there is no electrical connection between the Commission's facilities in north-western Ontario and those serving customers in the remainder of the province. Statistics are therefore presented for two operating systems, the East System and the West System; the systems respectively serve the areas east and west of a line extending north from Lake Superior to the Albany River, a line that roughly conforms with the boundary dividing Thunder Bay District from the Districts of Algoma and Cochrane.

In addition to administering the enterprise over which it has direct control, the Commission, under the Power Commission Act and the Public Utilities Act, exercises certain regulatory functions, particularly with respect to the group of municipal electrical utilities which it serves. In order to provide convenient and expeditious service in this dual function of regulation and supply, the Commission subdivides its province-wide operations into seven regions with regional offices located in seven major municipalities.

The Commission is concerned primarily with the provision of electric power by generation or purchase and its delivery to the electrical utilities for resale in municipalities having cost contracts with the Commission. The Commission supplies power in bulk, though not under cost contract, to direct customers, including industrial customers whose requirements are so large or so unusual as to make service by the local municipal utilities impracticable, mines, industries in unorganized territories, and certain interconnected systems.

In addition to these operations, which represent about 90 p.c. of its energy sales, the Commission delivers electric power to retail customers in rural areas and in a small group of about 30 municipalities served by Commission-owned local distribution facilities. Retail service throughout the province is provided for the most part, however, by the municipal electrical utilities, who supply ultimate customers in most cities and towns, in many villages, and in certain populous township areas. The municipal electrical utilities are owned and operated by local commissions.

During 1966, the Commission's investment in fixed assets at cost increased by \$194,245,123 and at the end of the year amounted to \$3,125,460,173. Assets, after deducting accumulated depreciation, were \$3,189,601,030. In that year, 358 associate municipal electrical utilities engaged in the retail distribution of electricity purchase power from the Commission. The assets of these utilities, after deducting accumulated depreciation, amounted to \$994,362,633, of which \$406,329,792 represented the equity acquired in the Commission's systems by the municipal utilities operating under cost contracts.

The Commission's power development program as at Dec. 31, 1966 is given in Table 14 and is also outlined at pp. 671-672.

¹ Dependable peak capacity—the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

¹ Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

Manitoba.—Manitoba Hydro is the primary developing, generating and distributing agency in the Province of Manitoba. The corporation came into being Apr. 1 1961, following amalgamation of the two former provincial government utilities engaged in the generation and distribution of electric power.

Manitoba Hydro operates six hydro-electric generating stations, two thermal-electric generating stations and 15 diesel-electric generating plants. The combined generating capability is 1,163,820 kw., hydro installations accounting for 910,000 kw., thermal installations for 244,000 kw. and diesel installations for 9,820 kw. Four hydro stations are located on the Winnipeg River near Winnipeg, one is on the Saskatchewan River 28 miles north of Winnipeg, and one is on the Nelson River, 450 miles northeast of Winnipeg. All six hydro stations and the thermal generating stations at Selkirk and Brandon are electrically interconnected to a common network known as the Manitoba Integrated System. Diesel installations are used to provide power to isolated northern communities where extension of hydro-electric transmission facilities are not feasible.

Manitoba Hydro serves 572 communities and 222,710 consumers in rural Manitoba and suburban Winnipeg through a network of 35,644 miles of transmission and distribution lines. In addition, Manitoba Hydro supplies part of The Winnipeg Hydro Electric System power requirements within the corporate limits of Winnipeg. Power plant construction in Manitoba in 1966 is outlined at p. 672.

Saskatchewan.—The Saskatchewan Power Corporation was established on Feb. 1 1949, and operates under the provisions of the Power Corporation Act (SS 1950, c. 10, amended). It succeeded the Saskatchewan Power Commission which had operated from Feb. 11, 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase and to transmit, distribute, sell and supply natural or manufactured gas.

During 1966, the Corporation served approximately 1,000 urban-size communities, retail sales, and served the cities of Saskatoon and Swift Current, the town of Battleford and the hamlet of Waskesiu in bulk sales. As at Dec. 31, the Corporation served 258,141 retail customers and 44,439 customers located in communities supplied with power through bulk sales, a total of 303,016. The retail customers included 188,986 urban customers and 69,591 classified as rural, mainly farm meters. During 1966, 3,391,829,

kwh. were supplied to its system, of which 3,096,039 kwh. were generated in Corporation plants and 295,790,000 kwh. were purchased in bulk. At the end of the year, the Corporation had invested, at cost, \$417,615,000 in electric system assets out of a total of \$582,829,000 in plant-in-service in the combined electric and natural gas systems.

Squaw Rapids, which reached its maximum capacity during the year, produced 29.9 p.c. of the gross generation in 1966. At year-end, the Corporation also owned and operated six steam generating plants—two each at Saskatoon and Estevan, and one each at Regina and Moose Jaw, the latter operated only during the peak months. Steam supplied 64.2 p.c. of total system requirements and three internal combustion gas dual fuel plants—the Kindersley, the Swift Current, and the Regina B—supplied most of the remainder. System capability in operation was assessed at 880,150 kw. with 537,000 kw. in steam plants, 281,000 in hydro and 62,150 kw. in gas turbine and internal combustion units. The Corporation owned and operated 74,381 miles of transmission and rural lines (excluding urban distribution).

Power plant construction in Saskatchewan in 1966 is outlined at p. 672.

British Columbia.—The British Columbia Hydro and Power Authority is a corporation and an agency of the Crown in right of the Province of British Columbia. The electric service of the Authority includes the generation and transmission of electricity and its distribution throughout the areas of British Columbia; the Authority also operates gas, passenger transportation and rail freight services.

Of the Authority's total electric power requirements of 11,158,219,692 kwh. for the year ended Mar. 31, 1967, 7,763,524,635 kwh. or 69.6 p.c. were produced by hydro-electric stations and 2,931,398,378 kwh. or 26.3 p.c. by thermal plants; the remainder, amounting to 463,296,679 kwh., was purchased. Kilowatt-hours of electricity sold during the year (10,000,478,404) were 17.6 p.c. higher than the previous year, compared with an average annual rate of increase of 12.0 p.c. during the past decade. Impressive rates of increase in kilowatt-hours consumed were recorded for all categories of customers during 1966-67. Residential consumption moved up 12.4 p.c., general consumption 13.4 p.c., industrial 13.8 p.c., and bulk power 25.8 p.c.

At Mar. 31, 1967, the number of customers served with electricity by the Authority totalled 555,029, an increase of 25,788 during the year. The average annual rate for residential customers dropped from 1.52 cents to 1.48 cents a kilowatt-hour, and the average annual residential consumption rose from 5,650 kwh. to 6,016 kwh.

Northwest Territories and Yukon Territory.—The Northern Canada Power Commission, formerly the Northwest Territories Power Commission, was created by Act of Parliament in 1948 to supply electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include the Yukon Territory. The Commission has authority to construct and operate public utility plants as required in the Territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse, Y.T., the Mayo River near Mayo, Y.T., the Snare River northwest of Yellowknife, N.W.T., and the Taltson River northeast of Fort Smith, N.W.T. Diesel-electric plants are operated at Fort Simpson, Fort Resolution, Fort McPherson, Aklavik and Cambridge Bay, N.W.T., Dawson, Y.T., and Field, B.C., and utility plants comprising power, central heat and water and sewerage services at Inuvik and Frobisher Bay, N.W.T., and at Moose Factory, Ont.

The Whitehorse Rapids power development, in service since 1958, supplies the Department of National Defence and the Department of Public Works at Whitehorse, most of the power for the city of Whitehorse, and a copper mining operation located within a few miles of Whitehorse. The two Snare River hydro developments, placed in service in 1948 and 1960, supply power to the gold mines in the Yellowknife area and to the town of Yellowknife; these two hydro plants are operated by remote control from Yellowknife. The Mayo River plant has supplied power to mining properties in the Elsie and Keno areas and to the communities of Mayo and Keno City since 1952. The Taltson River Hydro project commissioned in late 1965 and which is to date the largest Canadian power development north of the 60th parallel, supplies the lead-zinc mining operation at Pine Point, and the communities of Fort Smith and Pine Point; the plant is operated by remote control from Fort Smith.

In 1966 the Commission assumed responsibility for the operation of the Cambridge Bay diesel plant, N.W.T., and the Dawson diesel plant, Y.T. Plans for 1967 include the construction of a 115-kv. transmission line from Yellowknife to serve the settlement of Rae, N.W.T., development of a Commission-owned diesel plant at Coppermine, N.W.T. and enlargement of the generating plant at Inuvik and Cambridge Bay, N.W.T., and a Moose Factory, Ont.

*The interpretation of the symbols used in the tables throughout the Year Book
will be found on p. xvi of this volume.*

Section 1.—Technology, Markets and Costs in Manufacturing

Analyses of the sales dollar or the production dollar of the manufacturing industries, showing how much of the total is distributed to employees, how much accrues to the owners of the business and what percentage is accounted for by various major expense items, have long been of widespread interest. Such analyses assist management in forming an impression of how the experience of their own particular plant or firm compares with manufacturing as a whole or with a particular industry. They help investors in assessing particular companies, especially in regard to profit ratios. Economists in government, the academic world and elsewhere use them in studying trends in the performance of Canadian industries, and management and union leaders often find them interesting in connection with wage negotiations.

A basic difficulty is that some statistics for the manufacturing industries are gathered from establishments—statistical units corresponding roughly to plants or mills—while other statistics can be gathered only from companies. A company operating establishments in both the mining and manufacturing industries would have its wage bill split between these industries but profit data would relate to both industries; the establishments would be classified to their respective industries but the entire figures of the company must be placed with those of the industry corresponding to its main activity.

Hence, official statistics cannot provide a complete array of the widely demanded ratios, such as salaries and wages to sales or production, or profit to sales, on the same completely comparable basis. However, ratios from the two sources—establishment statistics and company statistics—sometimes jointly offer a general over-all impression of the structure of inputs in an industry, as illustrated by the following figures for 1965 for manufacturing establishments owned by corporations and for entire corporations classified to the manufacturing industries. Although salaries and wages, for instance,

* Sections 1 to 3 were prepared in the Manufacturing and Primary Industries Division, Dominion Bureau of Statistics, and Section 4 in the Information Division, Department of Industry, Ottawa.

might be a higher or lower percentage of revenues on a company basis, the establishment ratio probably gives a reasonably good idea of what its approximate magnitude would be for companies, since individual industries where companies often operate on a substantial scale across the boundaries of the manufacturing universe are not an undue proportion of the total.

<i>Item</i>	<i>Percentage of Total Revenues</i>	
	<i>Manufacturing Establishments Owned by Corporations</i>	<i>Corporations Classified to the Manufacturing Industries</i>
Cost of materials, supplies and goods for resale.....	56.6	..
Cost of fuel and electricity.....	1.8	..
Salaries and wages (excl. "fringe" benefits).....	20.0	..
Other expenses.....
Capital cost allowances.....	..	4.2
Income tax liabilities.....	..	2.7
Profits after taxes.....	..	3.6

If in the above statement the blanks could be filled in, each column would add to 100 p.c. (There are slight incomparabilities in the definitions of total revenues in the two sets of figures.)

When individual industries and industry groups are compared, various expenses and net profits show a marked variation in relation to production or sales. Table 1 gives an analysis of the gross value of production (total activity) by industry group for 1965. The industry groups are ranked according to their materials-intensity of production, that is, by the total cost of their materials and supplies (and any goods purchased for resale) as a percentage of the gross value of production.

It will be noticed that this materials item, the cost of purchased fuel and electricity, and value added make up 100 p.c. of the gross value of production. Value added is a measure of production within an industry, excluding its purchases of the products or services of other industries. In the Census of Manufactures, the only inputs which it is practicable to survey and deduct from the gross value of production in calculating value added are the cost of materials and supplies laid down at the plant and purchases of fuel and electricity. The "other value added" category, of course, includes depreciation and profits, although company statistics rather than the establishment statistics represented in Table 1 must be used to obtain a measure of these items. Net earnings capital cost allowances and net profit before taxes by industry group in 1965 are shown on a company basis in Table 2; 1966 data are available for these ratios and have been included and also, because net profits are highly variable and trends in profit ratios are of considerable interest, net profits for a number of earlier years are shown. (Net earnings equal net profit before taxes plus capital cost allowances.)

Value added is often termed net production, in contrast to the gross value of production. (The gross value of production differs from total shipments and other revenue by the amount of net changes in inventories of goods in process and finished goods.) Because it is, as noted, a measure of the production within the particular industry, analyses based on it are also of interest. Table 3 shows a percentage analysis of total value added by industry group for 1965, with the industry groups ranked by their labour-intensity of production, as measured by total wages and salaries as a percentage of total value added. For its possible interest, the cost of fuel and electricity per dollar of value added by manufacture is shown.

It is to be noted that statistics of the manufacturing industry relate to "manufacturing activity" or "total activity" according to whether or not non-manufacturing activities of manufacturing establishments have been included; since many manufactures cannot split payrolls between manufacturing and non-manufacturing activity, tot

activity is a useful basis for study. Total activity is used in Tables 1 and 2, except for the ratio of fuel and electricity costs to value added by manufacture. A more detailed examination of similar ratios for individual industries rather than industry groups would reveal certain relationships between cost profiles and the technology of industries, and the type of economic use or market served by them.

From Table 1 it will be seen that four industry groups make much more intense use of purchased fuel and electricity than manufacturing as a whole. In descending order of their fuel and electricity costs as a percentage of gross value of production, these industry groups are: non-metallic mineral products industries (including cement manufacturers), paper and allied products industries, the primary metal industries, and the chemical and chemical products industries. The last group does include some secondary manufacturing, as do the other groups, but in general these four industry groups are primarily engaged in transforming natural resources into inputs for other industries. Manufacturing processes characteristic of some industries in these groups include heat-consuming types of chemical transformation of materials or the mechanical attrition of materials, with consequent heavy demands for energy. They are also generally capital-intensive industries, as evidenced by payrolls being below the average for manufacturing as a percentage of total value added, and net earnings and profit ratios (Table 2) being well above the average for manufacturing. (Although profits ratios also reflect other features of a company's financial structure, capital-intensity tends to create a necessity for a higher profit ratio on sales for a given return on the owner's investment as well as on the total assets.)

In all four groups except the chemical industries, salaries are a low percentage of payrolls by comparison with all manufacturing. The chemical industries, like the petroleum and coal products industries, have a high proportion of highly paid specialist employees and a high ratio of salaries to payroll. The petroleum and coal products industries, although also engaged in the chemical transformation of natural resources like some of the individual chemical industries, have a very low ratio of payroll to gross value of production and to value added and (as shown in Table 1) are the most materials-intensive industry group of all. This is partly because oil companies are split statistically into establishments in the mineral industries, regarded as selling to their own companies' (or others') refineries, while, for instance, cement plants in the non-metallic mineral products industries typically quarry their most important materials within accounting units included in the manufacturing industries. Refineries are also able to make use of products of their own processes, reducing the cost of purchased fuel. Many considerations like these affect industrial ratios.

Although it is difficult to generalize about materials-intensity, it will be noticed that the five industry groups in Table 1 showing greater materials-intensity than all manufacturing industries use large amounts of natural resources or may transform or assemble considerable quantities of imported materials or parts. (The motor vehicle industry, which assembles large quantities of parts, many imported, is included in the transportation equipment industries.)

The labour-intensive industries constitute a clearly recognizable class of industry at the industry group level. This characteristic may be measured on the basis of gross value of production (Table 1) or in respect to total value added (Table 3). Table 3 shows that some of the industries most subject to import competition are at the top range of labour-intensity, on the basis of value added; the natural resource industries, except for the wood products industries, tend to be at the lower end of the scale. Comparison of wages and salaries as a percentage of value added indicates that salaries tend to be low in relation to wages; that is, production labour tends to bulk larger in the over-all payroll than for manufacturing as a whole. The fuel-intensity, measured in Table 3 by costs of purchased energy per dollar of value added by manufacture, tends to be low in the labour-intensive industries. It is also noteworthy that industries at the top end of the scale tend to sell finished products.

The type of market served by an industry has the most obvious and direct impact when advertising expenses are considered. Table 4 shows advertising expenditures as a percentage of shipments of goods of own manufacture by various industry groups in 1965.* An attempt has been made to arrange the industry groups informally into meaningful categories according to the degree of orientation toward the consumer or otherwise. The influence of a consumer market is clearly in the direction of higher relative advertising expenses, although industries selling chiefly to consumer markets fall into two general categories, one with much higher advertising ratios than the other. Convenience goods tend to occasion high advertising ratios, as do some specialty goods. Mainly consumer-oriented industries like toilet preparations manufacturers and manufacturers of pharmaceuticals and medicines and of soaps and cleaning compounds are actually the reason for the high advertising ratio of the chemical and chemical products industries group although it contains large volumes of non-consumer-oriented production. Similarly, the miscellaneous manufacturing industries include such consumer-goods industries as clock and watch manufacturers, the toys and games industry and pen and pencil manufacturers. Among the clearly non-consumer-oriented industries, producers of basic industrial materials sold in bulk tend to have the lowest advertising ratios. (Importance of export markets is an incidental feature of some of these industries.)

* Results of this survey, the first since 1954, will be published by the Merchandising and Services Division of the Dominion Bureau of Statistics in 1968.

4.—Advertising Expenditures as a Percentage of Shipments, by Market Characteristics and Industry Group, 1965

Market Characteristics and Industry Group	Advertising Ratio	Market Characteristics and Industry Group	Advertising Ratio
Mainly or Exclusively Non-consumer Markets—		Consumer and Non-consumer Markets (both large)—continued	
Primary metal industries.....	0.16	Petroleum and coal products industries.....	1.15

Printing, publishing and allied industries	1.02	Frequent Small Purchases by Consumers—	
Furniture and fixture industries.....	1.09	Food and beverage industries.....	2.03
Electrical products industries.....	1.15	Tobacco industries.....	3.36

Section 2.—Changes in the Manufacturing Industries since 1961

Employment in the manufacturing industries in 1965 showed its largest annual percentage increase since the beginning of the expansionary phase of the business cycle in 1961. There were marked influences from rising fixed capital formation in the economy, higher consumer expenditures, especially on durable goods, and higher exports. Production continued to rise in the motor vehicles industry, reflecting the increase in consumer purchases and also early export effects of the Canada-United States Agreement on Automotive Products, signed in January 1965. In fact, motor vehicle manufacturers made the largest single contribution of any industry to the over-all increase in employment in 1965 and replaced pulp and paper mills as Canada's largest manufacturing industry in terms of value of shipments. The second largest numerical contribution to increased employment came from miscellaneous machinery and equipment manufacturers.

The value of shipments of goods of own manufacture of the manufacturing industries reached \$33,889,000,000 in 1965, an increase of 9.8 p.c. over 1964; this advance was about the same as the average annual rate of increase over the 1961-65 period (9.6 p.c.). Value added by manufacture rose by 10.3 p.c. in 1965 to a total of \$14,928,000,000. The monthly survey of shipments of manufacturers indicates that shipments reached \$36,709,000,000 in 1966 and \$37,474,000,000 in 1967.*

Subsection 1.—Employment, Production and Shipments Changes in Industry Groups

Analyses of recent changes in employment in various industry groups are given in Tables 5 and 6; Table 5 shows the sources of the increase in over-all employment by industry group for the 1961-65 period, based on the annual Census of Manufactures, and Table 6 shows percentage changes, on a year-to-year and an average annual basis, for the same period.

The volume of production by industry group, using the unrevised (1948) standard industrial classification, not wholly comparable with other statistics presented here, is shown for several recent years in Table 7. [Indexes of the volume of production, which exclude the effects of price changes and generally relate to net production and which are based on the revised (1960) standard industrial classification, will be available in mid-1968.] The 1967 indexes are preliminary.

* DBS publication, *Inventories, Shipments and Orders in the Manufacturing Industries* (Catalogue No. 31-001).

The value of shipments of goods of own manufacture by industry group for selected years is given in Table 8; data for 1966 and 1967 are preliminary, based on the monthly survey.*

* DBS publication, *Inventories, Shipments and Orders in the Manufacturing Industries* (Catalogue No. 31-001).

5.—Percentages of the Over-all Increase in Employment in the Manufacturing Industries Accounted for by Industry Groups, 1961-65

Industry Group	Percentages of Total Change				
	1961-62	1962-63	1963-64	1964-65	1961-65

Subsection 2.—Provincial Shipments Changes

The value of shipments of goods of own manufacture includes the effects of price changes but nevertheless affords an interesting basis for comparing the relative expansion of different areas of Canada. In Table 9, annual shipments are shown for selected years in the 1961-67 period; 1966 and 1967 figures are based on the monthly survey and are preliminary.

9.—Value of Shipments of Goods of Own Manufacture, by Province, Selected Years, 1961-67

Province or Territory	1961	1964	1965	1966 ^p	1967 ^p	Change, 1966-67

Subsection 3.—Changes in Exports of Manufactured Goods

Exports of manufactured goods in 1965 were apparently equal to about 16 p.c. of the value of shipments of goods of own manufacture by the manufacturing industries in that year. The proportion in 1966 was 18 p.c., using preliminary estimates of total manufacturers' shipments. Manufacturers do not regularly report shipments on the basis of their destination but it is believed that the domestic exports of fabricated materials and of end products together approximate total exports of Canadian manufactures. Exports of end products approximate exports of finished manufactured goods, although the classification includes a very small amount of non-manufactured goods. The following statement shows exports of fabricated materials and end products compared with total shipments of manufacturers in 1961 and 1964-66 (some figures do not add due to rounding):—

Item	1961	1964	1965	1966
	(\$'000,000)			
Domestic Exports of—				
Fabricated materials.....	2,916.4	3,714.2	3,923.5	4,217.0
End products.....	706.4	1,420.8	1,606.3	2,455.1
Manufactured Goods (approx.).....	3,622.9	5,135.0	5,529.8	6,672.1
Shipments of goods of own manufacture.....	23,439.0	30,856.0	33,889.4	36,709.3

Section 3.—Statistical Data for the Manufacturing Industries

Subsection 1.—Major Historical and Current Statistics of Manufacturing

Statistics on manufacturing in Canada have been collected since 1870, originally in connection with the decennial or quinquennial censuses for the period 1870 to 1915 and since 1917, through the annual Census of Manufactures. Although every effort has been made to maintain comparability in the statistics since 1917, as shown in Table 10, change in coverage of industries, type of data collected and the method of its treatment have inevitably introduced discontinuities or lack of comparability in certain components. On such major change in concept occurred in 1952 when the gross value of products was replaced by the value of factory shipments. More recently, the introduction of the revised standard industrial classification in 1960 and the new establishment concept in 1961 led to a break in continuity with previous years. An indication of the effects of these revisions in classification and concept is given in Table 10 where statistics for the 1957-59 period are given on both the 1948 standard industrial classification and manufacturing activity concept and the revised (1960) standard industrial classification and new establishment concept. Under the latter concept, a manufacturing establishment (i.e., one whose major activity is manufacturing) is the smallest reporting unit capable of reporting all of the following: materials and supplies used, goods purchased for resale as such, fuel and power consumed, number of employees and their pay, inventories, and shipments or sales.

The introduction of the total activity concept in 1962 and its application to 1961 data produced a considerable amount of data on non-manufacturing activities of manufacturing industries and has resulted in the transfer of statistics on some items, such as office and administrative workers and working owners and partners, from manufacturing to total activity. Table 11 sets out summary statistics for manufacturing activity and total activity for 1961-65. It should be noted that the 1961 data in Table 11 are not directly comparable with those for the same year in Table 10.

10.—Summary Statistics of Manufactures, 1917-61

NOTE.—Figures for intervening years from 1918 to 1949, not included in this table, are given in the 1962 Year Book, p. 616. Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a basis comparable to the series given below; statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

Year	Establishments	Employees ¹	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture ²	Value of Shipment of Goods of Own Manufacture

1960.....	32,852	1,275,476	5,150,503	12,451,637	10,371,284	23,279,804
1961.....	32,415	1,264,946	5,231,447	13,127,708	10,682,138	24,243,295

¹ Includes working owners and partners.² For 1924-51, inclusive, the value added by manufacture is computed by subtracting cost of fuel, electricity and materials from gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available.³ Prior to 1952, gross value of products.⁴ A change in the method of computing the number of employees in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.⁵ Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included.

11.—Summary Statistics of Manufactures, 1961-65

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts. Figures in this table include poultry processors, book publishers, electroplating establishments, dental laboratories, and prescription branches in the ophthalmic goods manufactures industry, not included in Table 10.

Year	MANUFACTURING ACTIVITY ¹

A Canadian-designed DC8-61 flight simulator nearing completion in a Montreal plant; these training devices, incorporating a most advanced motion system, are being used by or built for Canadian and seven other large international airlines and for military training purposes by ten western nations.

A fetal heart monitor being assembled in a Winnipeg applied research plant, one of the complex electronic medical devices recently developed.

New products changes in technology contribute to expansion and sophistication of the manufacturing broad range of individual industries

Subsection 2.—Distribution of Manufacturing by Province and by Metropolitan Area

Distribution by Province

Ontario and Quebec together accounted for 81.6 p.c. of the value added by manufacture in Canada in 1965—Ontario for 52.8 p.c. and Quebec for 28.8 p.c. British Columbia was responsible for 8.4 p.c., the Prairie Provinces for 6.6 p.c., and the Atlantic Provinces for 3.4 p.c. In Ontario, value added by manufacture averaged \$1,161 per capita of the population, in Quebec \$757, in British Columbia \$694, in the Prairie Provinces \$291 and in the Atlantic Provinces \$261; these averages compare with a national average of \$760.

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts.

Province or Territory and Year	Estab-lish-ments	MANUFACTURING ACTIVITY						TOTAL ACTIVITY

¹ Confidential.² Excludes an industry or industries data for which cannot be published with industry group but which are included in the residual of unpublished data preceding all industry totals for the province; exclusions may affect comparability with data for previous years. For a list of industries involved, see DBS report *Manufactures of Canada, Section A: Summary for Canada, 1965* (Catalogue No. 31-203).⁴ Total includes exclusions referred to in footnote 2.

Distribution by Metropolitan Area

The 16 census metropolitan areas* for which manufacturing statistics are given in Table 16 accounted in 1965 for manufacturing value added of \$8,819,516,000 and shipments of goods of own manufacture of \$19,687,537,000; the former was 59.1 p.c. and the latter 58.1 p.c. of the respective totals for all Canadian manufacturing industries. The proportions of total employees and of salaries and wages accounted for by these metropolitan areas were slightly lower. They had 898,739 employees, including those in non-manufacturing activity, which was 57.2 p.c. of the total for Canada, and they paid total salaries and wages of \$4,483,948,000 to these employees, or 57.3 p.c. of the total.

Approximately one half (51.1 p.c.) of all value added by manufacture in Canada was accounted for by the seven largest metropolitan areas, as ranked by the value of their shipments of goods of own manufacture. In descending order these were: Toronto, Montreal, Hamilton, Vancouver, Windsor, Winnipeg and Kitchener. These areas accounted for 50.0 p.c. of the shipments of goods of own manufacture, 49.7 p.c. of the total employees and 50.1 p.c. of total salaries and wages paid by Canada's manufacturing industries.

* As defined for the 1961 Census of Population; see DBS publication 1961 *Census of Canada—Population: Incorporated Cities, Towns and Villages* (Catalogue No. 92-535). These areas are in some cases substantially larger than metropolitan areas defined for other purposes.

This large modern rod mill is part of the great steel manufacturing complex at Hamilton, Ont., the major industry of that highly industrialized city. The mill is capable of converting steel billets into rods at speeds of up to 8,500 feet a minute. On the moving tables in the foreground, rod is cooled at a controllable uniform rate, resulting in improved quality and yield.

16.—Summary Statistics of Manufactures, by Census Metropolitan Area, 1964 and 1965

Census Metropolitan Area and Year	Estab-lish-ments	MANUFACTURING ACTIVITY							TOTAL ACTIVITY		
		Production and Related Workers			Cost of Fuel and Elec-tricity	Cost of Materials and Supplies Used	Value of Shipments of Goods of Own Manu-facture	Value Added	Total Employees		Total Value Added

**Subsection 3.—Size of Manufacturing Establishments
Based on Employment and Shipments**

Size Based on Employment

About one half (51.9 p.c.) of all persons employed in Canada's manufacturing industries in 1965 worked in establishments employing 200 or more persons and about one fifth (19.7 p.c.) worked in establishments employing 1,000 or more. There were 142 establishments employing 1,000 or more in 1965 compared with 127 in 1964 and 108 in 1961.

Size Based on Shipments

The average size of a manufacturing establishment in terms of shipments of goods of own manufacture was slightly above \$1,000,000 in 1965, after having been below that mark in previous years. However, the many small establishments account for a limited percentage of all shipments. Establishments with shipments of \$1,000,000 or more contributed 85.6 p.c. of all shipments of goods of own manufacture from the manufacturing industries.

In 1965, for the first time, motor vehicle manufacturers led all other Canadian industries in value of shipments. The firms manufacturing vehicles and those manufacturing vehicle parts and accessories together employed nearly 75,000 persons and paid them well over \$1,000,000,000 in salaries and wages.

Section 4.—Federal Assistance to Manufacturing

The federal Department of Industry was established in July 1963 to promote the growth, efficiency and improvement of manufacturing industries in Canada. The Department assists Canadian industries to adapt to technological changes and variations in domestic and export markets; it aids potentially sound industries to overcome problems of growth and development and promotes industrial research and design activity.

Program for the Advancement of Industrial Technology.—In 1965 the Department of Industry initiated a Program for the Advancement of Industrial Technology (PAIT) to stimulate industrial growth by the application of science and technology to the development of new or improved products and processes. The basic aim of the Program is to help industry up-grade its technology and expand its innovation activity by underwriting specific development projects that involve a significant advance in technology and which, if successful, offer good prospects for commercial exploitation. PAIT is essentially a form of "development insurance" with the Government sharing the financial risk of the development with the sponsoring company.

PAIT assistance is available to individual Canadian companies or groups of Canadian companies for developmental projects to be carried out and exploited in Canada. Companies are expected to have the capabilities and facilities to undertake the development work and also to provide for the manufacture and sale of the resulting products in both domestic and export markets. This Program is designed to increase the technical competitiveness of Canadian industry and is also intended to help create an industrial environment attractive to Canada's best-qualified scientific, technical and managerial personnel.

Since the inception of the PAIT program, 109 Government-assisted development projects, representing a total effort of approximately \$35,000,000, have been undertaken by Canadian firms.

Industrial Research and Development Incentives Act.—The Department of Industry is responsible for administering the program of the Industrial Research and Development Incentives Act (IRDIA), enacted in March 1967. The Act provides for cash grants in place of the former tax allowance for research and development. Grant or equivalent tax credits are available for 25 p.c. of capital expenditures for scientific research and development in Canada, and for the increase in current expenditures in Canada for scientific research and development over the average of such expenditures in the preceding five years.

To qualify for a grant, expenditures must be for scientific research and development which, if successful, is likely to lead to or facilitate an extension of the business of the corporation. Accordingly, corporations must usually undertake to exploit the results of the research and development in Canada. Also, corporations must normally be free to export products resulting from the research and development to all countries in the world.

Automotive Program.—The Canada-United States Agreement on Automotive Products, signed by Prime Minister Pearson and President Johnson on Jan. 16, 1965, provides for the removal of tariffs and other impediments to trade between the two countries in motor vehicles and original equipment parts. The basic objective of the plan is to provide access to expanded markets for Canadian motor vehicle and component producers. By increased production and specialization, they will be in a position to expand trade and employment and to improve the productivity and efficiency of the industry. In order to enable Canadian vehicle and parts producers to achieve these objectives, a number of important features were incorporated into the program. The most important of these was the undertaking of Canadian motor vehicle manufacturers to expand very considerably Canadian production by the end of the 1968 calendar year.

As a result of the new program, Canada is producing an increasingly larger share of the total North American output of vehicles and components. Canadian exports of vehicles and parts and employment in this industry have increased substantially since the implementation of the program and new investment in additional plants and expansions to existing facilities has been extensive.

Machinery Program.—A Machinery Program was introduced by the Department of Industry in 1967 with two main objectives—to encourage efficiency by permitting Canadian industry to acquire capital equipment at the lowest possible cost, and to facilitate the development of more specialized lines of production by the Canadian machinery industry. Under this Program, a new tariff item (42700-1) will replace 18 existing items. Rates on these items have ranged up to 22½ p.c., depending on whether a machine was of a “class or kind” made in Canada. This class or kind distinction will disappear, replaced by a common rate of 2½ p.c. British Preference, 15 p.c. Most-Favoured-Nation. At the same time, the new tariff rate will apply to any products under the item which Canadian machinery manufacturers can produce as soon as they are able to do so. (Former tariff provisions excluded Canadian-made machines from protective rates until such machines accounted for 10 p.c. of domestic consumption in their class.) This provision will especially encourage the production of custom-designed machinery in Canada.

The Program will provide for remission of duty where this is in the public interest and the machinery imported is not available from production in Canada. A Machinery and Equipment Advisory Board will advise the Minister of Industry concerning eligibility of machinery for remission of duty in accordance with the Program criteria, with final authority for granting remission lying with the Governor in Council. A Review Board will be established to deal with appeals on the Board's findings. Machinery producers may also apply for remission of duty on production parts included in Tariff Item 42700-1 which they must import. This provision should stimulate Canadian machinery manufacturers to specialize their production and enable them to compete more effectively.

Building Equipment, Accessories and Materials Program (BEAM).—In 1967, the Department of Industry introduced the BEAM Program to assist in achieving greater productivity and efficiency in the manufacture and use of building equipment, accessories and materials. The Program has five main objectives: to establish a comprehensive construction information system; to promote the adoption of modular dimensional coordination of building components; to encourage the industrialization of the building process; to promote the adoption of uniform building regulations and standards; and to

establish a Design Awards Program. To assist the Department in defining the objectives and in developing and implementing the Program, three Industry Advisory Committees have been established on Modular Co-ordination, Construction Information Systems and Industrialized Building Techniques and Systems. These committees meet on a regular basis and include architects, engineers and representatives of trade unions and the manufacturing and building industries.

A study has been undertaken to determine the precise needs and priorities for construction information in Canada, to identify the ways in which a comprehensive and flexible information system could be developed and to enable government and industry to assess the feasibility of establishing such a system. The Industry Advisory Committee on Construction Information Systems is also considering the development of system designs and methods of coding and indexing information.

With the assistance of the Industry Advisory Committee on Modular Co-ordination the Department has developed a program to encourage the increased use of dimensional standardization of building components. A series of six conferences was held at major Canadian centres during October and November of 1967 to acquaint policy-makers within the industry with the technological and economic advantages of modular dimensioning. Clinics were planned to instruct architects, engineers, draftsmen and building supervisors on modular principles in building. A Directory of Canadian Modular Building Material is being prepared for publication by the Department.

To obtain a first-hand knowledge of industrialized building techniques, the Department sponsored three industrial missions to European countries to study building systems based on prefabricated concrete, masonry and steel components. A national conference "A Systems Approach to Construction", is planned, to inform all sectors of the industry on the development of industrialized building techniques; it will be followed by a series of seminars and lectures with leading authorities participating. Because industrialized building would be greatly facilitated by the adoption of uniform building regulations, the development of performance standards, and the establishment of a means of assessing new building materials, systems and techniques, an in-depth study is being organized to point the way toward such developments.

The BEAM Design Awards Program being established will recognize design excellence of building equipment, accessories and materials which incorporate modular co-ordination, prefabrication, pre-assembly and standard component design. Submissions will be accepted in five categories—structural systems, exterior cladding, interior finishing systems and mechanical and electrical equipment.

Industrial Design.—The National Design Council and the Department of Industry sponsored many activities in 1967 and provided an advisory service to assist designers meet the challenges offered by Expo 67 and centennial year projects. Under the Canadian Design '67 Program, initiated in 1965 to encourage the manufacture of well-designed products for use in connection with centennial projects, catalogues of well-designed products were distributed to architects, contractors, buyers, retailers and business men in Canada and abroad and, to further promote these products, displays were shown across the country. More than 380 new product designs were accepted and promoted to prospective manufacturers and over 70 products were adopted and produced for centennial year.

Through the National Design Council and the Department of Industry, a very successful international congress and seminar on industrial design was held at Ottawa and Montreal in September 1967, attracting over 625 representatives from 32 countries.

Two Design-Canada awards projects, which are intended to recognize design achievements of Canadian manufacturers by offering awards and promotional benefits, were completed in 1967. The Structural Steel Awards Program attracted 62 entries—five designs of buildings or bridges received Awards of Excellence and seven entries were given Design of Merit recognition. The Concrete Awards Program, from 152 entries, recognized

three designs for Awards of Excellence and 14 as Designs of Merit. In 1967, a Design-Canada Centre was completed at Place Bonaventure in Montreal which, with the Toronto Centre, serves as a focal point for the promotion and display of products and design.

The Design-Canada service includes a reference service of books, periodicals and technical papers on design subjects; a record of professional designers and design services; a speakers' service; an audio-visual service with films, slides and other material for distribution, lending or sale; and a product index, which is an illustrated record of all products accepted for design promotion by committees appointed by the National Design Council. An advisory service is available on request to designers, manufacturers, business men, educators and the general public; an advisory service is also available to government agencies responsible for office installations on the premise that good design can improve the operational efficiency of the working environment with considerable cost reductions.

Design-Canada scholarships and grants encourage advanced training and research in the field of industrial design and support the promotion of industrial design in Canada.

Area Development Program.—The area development program fosters economic development in designated areas characterized by high chronic unemployment, slow employment growth and serious problems of under-employment as measured by low non-farm family income. Development grants of up to one third of the capital cost of new machinery and equipment and new buildings are available to assist new and expanding manufacturing and processing industries in the designated areas. In addition, special accelerated depreciation allowances are available for tax purposes on new machinery, equipment and new buildings, or on significant extensions of old ones.

The program embraces large regions of the country, in all provinces, with 92 Canada Manpower Centre areas and contiguous counties and census divisions being designated. The program covers areas comprising approximately 17 p.c. of the labour force. By the end of 1967, more than 1,200 firms had indicated intention to establish new or expanded facilities in designated areas and to invest more than \$1,800,000,000. It is estimated that over 50,000 new jobs will be provided directly by these new or expanded facilities and that a similar number of additional jobs associated with supply and service industries will be provided.

Defence Product-Development Assistance.—This program provides funds for Departmental activity to sustain technological capability in Canadian industry by sharing the cost of selected defence development projects, the amount authorized for the year ended Mar. 31, 1968, being \$25,000,000. In some cases, project costs are shared with the United States and other allied governments. Typical of projects supported under the program to meet present or anticipated requirements of allied governments are: Helicopter Logistic Devices at Okanagan Helicopters (Vancouver); Air Transportable Maintenance Shop at ATCO (Calgary); Black Brant Family of Rockets at Bristol Aerospace (Winnipeg); Tilt Wing Aircraft at Canadair (Montreal); High Frequency Sounding Equipment at EMI Cossor (Halifax); Xenon Light Sources at Atlantic Films (St. John's, Nfld.); the Twin Otter Aircraft Turbinization Project at de Havilland (Toronto); the OT-4 Stationary Gas Turbine Engine at Orenda (Toronto); and Parachute Developments at Irvin Airchute (Fort Erie).

Adjustment Assistance (for Firms in the Automotive Parts Industries).—The Automotive Program offers increased opportunities to Canadian automotive parts manufacturers for expanded production, rationalization of output and reduced costs. In order to take advantage of these opportunities, Canadian parts makers must engage in substantial re-equipment and plant expansion programs. The Adjustment Assistance Program has been established to make term loans available to automotive parts manufacturers for the financing of the acquisition, construction, installation and modernization of facilities or machinery and for use as working capital.

A program of tariff remissions on imported machinery and equipment was also introduced in order to further assist the automotive parts producers to expand and modernize productive facilities. The tariff remissions cover machinery and equipment used in the production of original equipment automotive parts, accessories and tooling when such machinery and equipment are not available from Canadian manufacturers in time to meet production schedules.

Adjustment Assistance (General).—In late 1967, the Government put forward a program of adjustment assistance related to the Kennedy Round. Objectives of the program are, first, to enable Canadian industries to benefit as much as possible from the widening markets and the increased scope for specialization and longer production runs and, secondly, to assist firms adversely affected by Kennedy Round agreements to adapt to more competitive conditions. Some firms will be forced to reorganize and re-equip to meet new challenges and others may wish to extend their opportunities. Under this program, the Government proposes to offer insurance on the major share of risk of loss for industrial adjustment assistance loans made by private lenders. Where obvious injury can be proved, direct loans may be made available. Technical assistance may also be offered to manufacturers preparing adjustment proposals in order to improve production, managerial skills, marketing and financial operations.

To be eligible for insured loans, firms must establish injury resulting from Kennedy Round tariff reductions or show that their export opportunities are significantly increased. A plan for re-structuring operations on a more competitive basis must be presented. An Adjustment Assistance Board will examine the feasibility of such plans. Finally, firms must demonstrate that suitable financing is not available from other sources on reasonable terms. Where a firm has incurred serious threat or injury due to the tariff changes, and where suitable private financing is not available, the Government may offer direct loans on the condition that a firm co-operate fully with the Board in seeking a workable solution to its difficulties. When necessary, firms may be assisted to find competent technical and professional advice from the private sector. The Government may contribute a maximum of 50 p.c. of the cost of such consulting services.

Shipbuilding Construction Assistance.—During 1967, the Federal Government continued its program of encouraging a self-sustaining and efficient shipbuilding industry. The program included examination of financial measures in support of shipbuilding and the application of general assistance plans administered by the Department of Industry. Legislation introduced in 1967 included transfer of responsibility for shipbuilding matters from the Canadian Maritime Commission to the Department of Industry.

The industry continued to respond to the policy of national competition for government shipbuilding requirements. Similarly, the industry made active use of the subsidy program for commercial vessels which provides a subsidy rate of 25 p.c. for vessels other than fishing trawlers for the period 1966-69, after which time it will be reduced by 2 p.c. each year until a rate of 17 p.c. is reached in 1972. The subsidy rate of 50 p.c. for fishing trawlers was reduced to 35 p.c.

With the support of other programs such as the Defence Development Sharing Program, the Department has encouraged the development of production of marine components and exports in this area have been increased.

Technical Missions.—Technical missions concerning magnesium manufacturing, structural steel, and powder metallurgy technology were recently organized to visit industrial establishments in the United States and Europe. The purpose of these missions is to enable Canadian business men to examine and assess the latest technological developments taking place outside Canada in their particular industries. The information gained is prepared in report form and circulated to Canadian industry.

CHAPTER XVII.—CAPITAL EXPENDITURES, CONSTRUCTION AND HOUSING*

CONSPECTUS

	PAGE		PAGE
SECTION 1. CAPITAL EXPENDITURES ON CONSTRUCTION AND ON MACHINERY AND EQUIPMENT.....	723	SECTION 3. HOUSING.....	737
SECTION 2. CONSTRUCTION STATISTICS.....	729	Subsection 1. Government Aid to House-Building.....	737
Subsection 1. Value of Construction Work Performed.....	729	Subsection 2. Housing Activities in 1966-67.....	740
Subsection 2. Contracts Awarded and Building Permits Issued.....	734	Subsection 3. Housing Statistics of the Census.....	745

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity—value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building, construction of dwelling units and housing statistics of the Census are covered in Section 3.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditures† in all sectors of the economy amounted to \$14,897,000,000 in 1966, an increase of 15.8 p.c. over the 1965 total of \$12,865,000,000. The over-all increase resulted from a 15.2-p.c. rise in construction expenditures and a 16.9-p.c. increase in the purchase of machinery and equipment. After 1946, capital outlays in Canada increased each year to a peak in 1957. A four-year decline followed but a significant increase shown in 1962 was strengthened in the next four years. Capital spending in current dollars exceeded the 1957 peak in these years but, in constant dollars, the 1957 level was not exceeded until 1964; in that year the capital program was recorded at 8.4 p.c. above 1957 and in 1965 and 1966 it was 21.7 p.c. and 34.8 p.c. higher, respectively. These expenditures on the expansion, modernization or renewal of the nation's production facilities are a significant indicator of the economic activity in the country; in 1966 they represented over 25 p.c. of the gross national product.

As shown in Table 1, construction accounts for almost two thirds of the total capital expenditures each year, and machinery and equipment for the remainder. Recently, there has been a slightly upward trend in the proportion of the total represented by the

* Except where otherwise noted, prepared in the Business Finance Division, Dominion Bureau of Statistics.

† Capital expenditure figures for 1965 and earlier years are final and those for 1966 are preliminary and subject to revision at a later date. Capital expenditures for 1965 and 1966, as well as intentions for 1967, appear in greater detail in the publication *Private and Public Investment in Canada, Outlook 1967*, available from the Queen's Printer (Catalogue No. 61-205).

purchase of machinery and equipment, which rose from 32.5 p.c. in 1961 to 37.3 p.c. in 1966. The proportion for housing construction moved upward from 17.9 p.c. in 1961 to 18.5 p.c. in 1964 but dropped to 14.6 p.c. in 1966. Non-residential construction outlays dropped from 49.6 p.c. of the total in 1961 to 45.5 p.c. in 1964 but increased in 1966 to 48.1 p.c.

1.—Capital Expenditures on Construction and on Machinery and Equipment, in Current and Constant (1957) Dollars, 1957-66

NOTE.—Actual expenditures 1957-65; preliminary actual 1966.

1966	9,346	7,263	5,551	4,487	14,897	11,750	25.8	24.8

The large increase in capital expenditures in 1966 over 1965 reflected substantially higher outlays in almost all economic sectors. Expenditures in the mining industry increased by \$259,000,000, or 35 p.c., much of it accounted for by sizable developments in iron, copper and potash. Investment in new manufacturing facilities rose by about 20 p.c., mainly attributable to expenditures on large projects in the pulp and paper, primary metals, electrical products and non-metallic mineral industries. Outlays by utilities continued upward, large expenditures being made on electric power installations, telephone facilities and new aircraft. Housing expenditures remained about the same as in 1965. Trade, finance and commercial services increased to \$1,462,000,000 from \$1,269,000,000, reflecting expanded programs for wholesale and retail outlets and for projects related to Expo 67. Capital expenditures by government departments increased at all levels—federal, provincial and municipal; large road-building programs contributed heavily to the increased total.

Each of the five major regions of Canada contributed to the 1966 increase in capital spending. The increases varied from 25 p.c. in the Atlantic Provinces to 18 p.c. in the Prairie Provinces, 17 p.c. in Ontario, 9 p.c. in Quebec and 3 p.c. in British Columbia. It should be noted that sharp year-to-year fluctuations in capital outlays in any one province are often associated with changing phases of a few large projects.

In 1966 capital outlays increased in each of the *Atlantic Provinces* but most of the growth was concentrated in Nova Scotia and Newfoundland. Increases in social capital expenditures were especially prominent and were related to large education, hospital and road-building programs. In the manufacturing and utilities sectors, increases in expenditures by the pulp and paper industry in Nova Scotia and electric power developments in New Brunswick and Newfoundland were the most notable. In *Quebec*, the major advance in capital spending occurred in the manufacturing and commercial services sectors. Within the manufacturing group, the major increases were in pulp and paper, primary metals and the chemical and chemical products industries. Preparations for Expo 67 resulted in a substantial increase in commercial construction. In *Ontario*, all major

sectors of capital spending were substantially higher than in 1965. The greatest increase in strength occurred in manufacturing, with expansion in the automotive, primary metals, electrical products and non-metallic mineral products industries. New mining developments, expansion of electric power, telephone and water system utilities coupled with an acceleration of university, hospital, school and road construction contributed importantly to the larger total. Capital outlays in the *Prairie Provinces* strengthened in all sectors of the economy with the exception of housing. In Alberta and Saskatchewan, large increases took place in the primary resources sectors where new oil and potash projects were initiated. Additional chemical facilities were the main reason for larger expenditures for manufacturing in Manitoba. Social capital outlays in the *Prairie Provinces* also increased substantially, particularly those for education and health services. In *British Columbia*, a further rapid advance in capital spending for new pulp and paper and power projects took place. In addition, there was an increase in social capital spending for schools.

2.—Summary of Capital and Repair Expenditures, by Economic Sector, 1965 and 1966

A summary of the capital expenditures in each province for the years 1965 and 1966 is given in Table 4. Such expenditures represent gross additions to the capital stocks of the province and are a reflection of economic activity in the area, although the actual production of these assets may generate major employment and income-giving effects in other regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the western provinces.

4.—Capital and Repair Expenditures, by Province, 1965 and 1966

Section 2.—Construction Statistics

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures that appear in Section 1. The data represent the estimated total value of all new and repair construction performed by contractors, by labour forces of utility, manufacturing, mining and logging firms, and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry. Table 5 shows the value of new and repair construction work performed during the period 1957-66 and Table 6 shows the value of such work performed by contractors and others in the years 1963-66.

5.—Value of New and Repair Construction Work Performed, 1957-66

NOTE.—Actual expenditures 1957-65; preliminary actual 1966.

Year	New	Repair	Total	Total Construction as Percentage of Gross National Product
	\$'000,000	\$'000,000	\$'000,000	p.c.

¹ Includes related structures employed in production of chemicals.

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 8. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and

by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

8.—Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1965 and 1966 with Totals for 1962-66

NOTE.—Actual expenditures 1962-65; preliminary actual 1966. Comparable figures from 1953 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

Subsection 2.—Contracts Awarded and Building Permits Issued

In this Subsection, statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only as far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

9.—Value of Construction Contracts Awarded, 1946-66

(SOURCE: *Southam Building Guide*)

NOTE.—Figures for the years 1926-45 are given in the corresponding table of the 1962 Year Book, p. 682.

Building Permits.—The estimated value of proposed construction is indicated by the value of building permits issued. Figures of building permits issued are collected for more than 1,400 municipalities across the country and are available for the individual municipalities, for metropolitan areas, for provinces and for economic areas in Quebec, Ontario and Manitoba.

The total value of permits issued for construction work exceeded \$3,714,000,000 in 1966, a decrease of 2.5 p.c. from the 1965 record figure. Residential construction as a whole declined by 9.4 p.c., although residential repairs increased 5.1 p.c. Industrial construction increased 10.1 p.c., commercial construction decreased 5.9 p.c. and institutional and government construction was 8.7 p.c. higher, resulting in an over-all increase of 3.4 p.c. for non-residential construction. All provinces recorded decreases in 1966 except Ontario, which moved up 7.9 p.c., and Manitoba, which held steady. Table 11 shows the value of building permits issued in each of 50 municipalities in 1966 compared with 1965.

11.—Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 50 Municipalities, 1965 and 1966

NOTE.—Comparable figures from 1956 are given in the corresponding table of previous Year Books beginning with the 1962 edition.

Section 3.—Housing*

Subsection 1.—Government Aid to House-Building

Federal Assistance.—The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1918 when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as "an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions". Central Mortgage and Housing Corporation (CMHC), a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and co-ordinates the activities of the Federal Government in housing. The Corporation has the authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It also acts as a research agency in fields associated with housing and assists provinces and municipalities in many aspects of urban growth. In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities that rightfully belong to other levels of government or that could be borne more effectively by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective home owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of approximately 5,500,000 houses have been built since the first covering legislation was enacted; about one third of these were financed in one way or another under the Housing Acts.

Under the terms of the National Housing Act, 1954 and its subsequent amendments, the Federal Government is active in many ways.

Loan Insurance.—Insured mortgage loans may be made for both home-ownership and for rental housing. They are normally available from approved lenders to individual

* Prepared (August 1967) in the Information Division, Central Mortgage and Housing Corporation, Ottawa.

home-owner applicants, to builders constructing houses for sale or for rent and for some special groups, such as co-operative housing associations and farmers. Insured loans are also available for the purchase, improvement, refinancing or sale of existing home-ownership and rental housing in designated urban renewal areas. Loans for existing housing in other areas are available only to purchasers wishing to occupy and improve such dwellings.

The maximum interest rate on insured loans is governed by a formula which permits the rate to fluctuate in accordance with changing yields on long-term government bonds. Under this arrangement, introduced in November 1966, the rate is automatically reviewed each quarter to maintain its level at $1\frac{1}{2}$ p.c. above the bond yield. In March 1967, the rate was reduced from $7\frac{1}{4}$ p.c. to 7 p.c. but reverted to $7\frac{1}{4}$ p.c. in July. Lenders may charge less.

Upon application, the borrower pays CMHC a fee of \$35 per unit to help defray expenses incurred in the examination of plans and specifications, in the determination of lending values and in compliance inspections during construction. An approved lender requires evidence that a home owner or home purchaser is providing 5 p.c. of the value of the house from his own resources. For the home owner this equity may be in the form of cash or a combination of cash, land and labour; for the home purchaser it may be in cash or labour. The regulations require that gross debt service—the ratio of repayments of principal and interest plus municipal taxes to the income of the borrower—should not exceed 27 p.c., although instances involving higher ratios may be considered on their merits. The borrower pays an insurance fee which is added to the amount of the loan and is repaid over the term of the mortgage; the fee ranges from $1\frac{3}{4}$ p.c. to $2\frac{1}{2}$ p.c. of the loan, according to type of unit and time of mortgage advances.

Home-ownership loans may be 95 p.c. of the first \$13,000 of lending value and 70 p.c. of the remainder for new housing. Rental housing loans may be for 90 p.c. of lending value. For single-family houses the maximum loan is \$18,000 and for multiple-family dwellings \$12,000 per unit. Loans for existing home-ownership and rental housing in urban renewal areas may be for 85 p.c. of lending value, subject to the same maximum amounts as for new housing. Loans for existing houses outside urban renewal areas may be 95 p.c. of the lending value, up to a maximum amount of \$10,000. The repayment period may be up to 35 years for new home-ownership and rental housing and for existing home-owner dwellings outside urban renewal areas. A maximum period of 25 years applies to existing houses in renewal areas.

Direct Loans.—CMHC may make direct loans for both home-ownership and rental housing where, in the opinion of the Corporation, loans are not available through approved lenders. Loans are made to any eligible home-owner applicant but direct loans to builders are subject to a requirement that the houses be pre-sold to satisfactory purchasers. By the end of 1966, direct lending by the Corporation totalled approximately \$3,230,000,000. The amount that may be advanced for this purpose out of the Consolidated Revenue Fund is \$4,000,000,000.

CMHC, with Government approval by Order in Council, may make loans to non-profit corporations to assist in financing the construction of low-rental housing projects or in the purchase of existing buildings and their conversion into low-rental housing projects. In addition to self-contained units, developments undertaken may include hostel or dormitory accommodation for the elderly and low-income individuals. Loans may be up to a maximum of 90 p.c. of the lending value established by CMHC. The period for repayment may not exceed the useful life of the project and in any case may not be for more than 50 years. The interest rate is established by Order in Council. Plans and specifications for such projects must be approved by the Corporation as well as financing and operating arrangements.

Since December 1960, the National Housing Act has provided financial assistance for the elimination or prevention of water and soil pollution. CMHC is authorized to make a loan to a province, municipality or a municipal sewerage corporation for the

construction or expansion of a central plant for the treatment and disposal of sewage wastes and the construction of one or more trunk collector sewers. The loan may not exceed two thirds of the cost of the project and the maximum repayment term is 50 years from date of completion. The interest rate is prescribed by the Governor in Council. The agreement covering the project contains a condition whereby 25 p.c. of the loan principal and 25 p.c. of the accrued interest will be forgiven for projects completed to the satisfaction of CMHC on or before Mar. 31, 1970. Where construction is not completed before that date, 25 p.c. of the loan advanced or warrantable by construction progress at that date, plus 25 p.c. of the accrued interest on advances, may be forgiven.

Long-term loans are available to a province or its agency, a municipality or its agency, a hospital, a school board, a university or college, a co-operative association or a charitable corporation, for the purpose of assisting in the construction of a student housing project. In all cases the government of the province concerned must approve the loan. CMHC may lend up to 90 p.c. of the project cost, subject to maximum amounts as follows: houses \$18,000; self-contained apartments \$12,000 per unit; and hostels \$7,000 per person accommodated. The term of the loan may not exceed 50 years. The interest rate is prescribed by the Governor in Council.

Guarantees.—CMHC is authorized to give a limited guarantee to banks or approved instalment credit agencies in return for an insurance fee paid by the borrower on loans made for additions, repairs and alterations to existing houses and apartments. A home improvement loan and the balance owing on any existing NHA home improvement loan on the property may not exceed \$4,000 for a one-family dwelling or \$4,000 for the first unit of a duplex, semi-detached or multiple-family dwelling, plus \$1,500 for each additional unit. Loans are repayable in monthly instalments over a period not exceeding 10 years at a rate of interest similar to that applicable to home-ownership loans.

Public Housing.—Under the National Housing Act and complementary provincial legislation, the Federal Government and the government of a province may enter into a partnership agreement to build rental housing for families and individuals of low income or purchase and rehabilitate existing housing for this purpose. Projects may include hostel or dormitory accommodation in addition to self-contained units. The Federal Government pays up to 75 p.c. of the capital costs and the provincial government the remainder, although the latter may call upon the municipality concerned to bear a portion of the provincial share. Rents for units in federal-provincial projects are related to the tenant's family income and size of family and operating deficits are shared on the same contractual basis as the capital costs. The Federal Government and the government of a province may also enter into an agreement to provide for a land assembly project which involves the development of raw land for housing purposes. Such projects are financed in the same manner as federal-provincial housing projects.

As an alternative method of producing public housing, the CMHC is empowered to make long-term loans to a province, or to a municipality or public housing agency with the approval of the province, for the provision of housing accommodation. Projects may consist of new construction or existing buildings and include dormitory and hostel accommodation as well as self-contained family units. Loans may be up to 90 p.c. of the total cost as determined by CMHC and for a term as long as 50 years but not in excess of the useful life of the development. The maximum that may be borrowed for a house is \$18,000, for a fully serviced apartment \$12,000, and for hostels or dormitories \$7,000 for each person accommodated. The interest rate is set by the Governor in Council.

Federal grants may be made covering up to 50 p.c. of losses incurred in the operation of public housing projects, for a period of up to 50 years but not exceeding the useful life of the project. Loans may be made to assist proponents of public housing projects to acquire land for future projects, the maximum loan being 90 p.c. of the cost of acquiring and servicing the property.

Urban Renewal.—Federal grants and loans are available under the Act to assist provinces and municipalities undertaking programs of urban renewal. CMHC, with Federal Government approval, may arrange with a municipality to undertake a study to identify blighted areas, determine housing requirements and provide data upon which an orderly program of conservation, rehabilitation and redevelopment can be based. The federal contribution may be as much as 75 p.c. of the cost. The legislation also authorizes federal contributions equal to one half of the costs of preparing an urban renewal scheme setting out proposals for urban renewal action, a similar cost-sharing arrangement for the implementation of a scheme, and loans up to two thirds of the provincial or municipal share of the cost of carrying out an urban renewal scheme. Loans may be for 15 years at an interest rate prescribed by the Governor in Council. To encourage the improvement and conservation of housing meeting minimum standards of construction, loans are available for the sale, purchase or refinancing of existing housing in urban renewal areas not designated for demolition.

CMHC Building.—The Corporation may construct and administer housing and certain other buildings on its own account and for other government departments and agencies. Its responsibilities include the provision of architectural and engineering designs, the calling of public tenders and the administration of construction contracts—including any necessary on-site surveying and engineering. On such contracts the Corporation carries out full architectural and engineering inspections.

Research.—CMHC is concerned with building technology in the formulation of standards for housing construction, in the use of suitable materials and in the development of new building techniques. The Corporation has no laboratory facilities but has direct experience of performance in the field and seeks the advice of specialists in various agencies and departments of the Federal Government in such matters. Research into the factors affecting housing is concerned with the measurement of the demand for new housing, the volume of new housing built and the supply of mortgage money for house construction. The Corporation also co-ordinates and publishes statistical information on housing. Funds provided under the National Housing Act support the activities of the Canadian Housing Design Council, the Community Planning Association of Canada and the Canadian Council on Urban and Regional Research.

Other Federal Legislation.—The Farm Credit Act, 1959 provides for federal long-term loan assistance for housing as well as for other farm purposes (see pp. 485-486); the Veterans' Land Act, 1942 provides a form of loan and grant assistance to veterans for housing and other purposes (see p. 352); and the Farm Improvement Loans Act, 194 (see pp. 483-484) provides for guarantees for intermediate- and short-term loans made by approved lending agencies to farmers for housing and other purposes. These three statutes are concerned only incidentally with housing.

Provincial Assistance.—All provinces have complementary legislation providing for joint federal-provincial housing and land assembly projects and, in addition, most provinces have enacted separate legislation with respect to housing. Details of such assistance may be secured from the provincial government departments listed in the Directory of Sources of Official Information included in Chapter XXVII under the heading of "Housing".

Subsection 2.—Housing Activities in 1966-67

Housing starts declined sharply in 1966, numbering 134,474 dwelling units compared with 166,565 in 1965, a decrease of 19.3 p.c. However, completions were higher in the later year, increasing from 153,037 units in 1965 to 162,192, with the result that there was a marked drop in the inventory of dwellings under construction from 119,854 units at the beginning of the year to 88,621 units at the year-end. In terms of new investment housing construction represented expenditures of \$2,181,000,000 in 1966, a 2.3-p.c. increase over the previous year.

Although the general trend in housing starts was downward throughout 1966, the decline was somewhat uneven. In the first few months there was a marked but short-lived increase in activity, particularly in starts of apartment dwellings in Toronto; thereafter, starts dropped off until the autumn. Although the \$500 bonus offered under the Federal Government's winter house-building incentive program was not continued for the 1966-67 season, a marked up-turn in starts of single detached houses took place in September and October, resulting from the stimulus of a direct lending program by the Central Mortgage and Housing Corporation that started a month or so earlier than similar programs in the three preceding years.

The immediate cause of the decline in housing starts in 1966 was a large reduction in mortgage lending activity by the institutional lenders. The volume of starts undertaken with assistance from private sources for both NHA and conventional-type loans dropped from 112,841 in 1965 to 67,646 in 1966; the effects of this drop were partially offset by an increase in direct loan activity by CMHC which financed 37,483 starts in 1966 against 30,091 in 1965.

The increase in direct loan activity coupled with the re-entry of the chartered banks into the mortgage market appears to have had a salutary effect on the situation. For the first six months of 1967, total applications for NHA loans by approved lenders and CMHC related to 50,065 units, more than double the corresponding 22,610 unit total for 1966. Of these, CMHC loans accounted for 32,216 units, 168.3 p.c. more than the year before, and the remaining 17,849 related to the approved lender activity, which was 68.3 p.c. above 1966.

¹ Classified as a Major Urban Area in 1966 Census area definitions.
Territories.

² Excludes the Yukon and Northwest Territories.

Operations under the National Housing Act.—NHA mortgage loans amounting to \$661,000,000 were approved in 1966 for the provision of 47,166 dwellings, compared with loans of \$763,700,000 approved for 58,826 dwellings in 1965. Direct lending by CMHC surpassed the volume of insured loans by approved lenders operating under the Act; loans by the federal agency had a value of \$526,000,000, against \$455,000,000 in 1965. Loans made available through private lenders in 1966 amounted to \$191,300,000 for 14,567 dwellings. Trust companies remained the largest source of private funds approving loans for 8,108 units; insurance company loans represented 6,150 dwellings.

Borrower and House Characteristics.—The average income of purchasers of NHA-financed houses in 1966 was \$7,287 or, in terms of family income, \$7,918. These incomes were 9.5 p.c. higher than the corresponding averages for purchasers in 1965 and appeared to be in line with the general increase in incomes in 1966. As in previous years, relatively few purchasers of NHA houses were drawn from the lower third of the range of family incomes. In 1966 only 4.8 p.c. of the borrowers had family incomes of less than \$5,000 compared with 9.0 p.c. in 1965.

The average age of purchasers of NHA houses was about 35 years in 1966, little changed from earlier years. As in 1965, just over one third of the purchasers had two or more children and 31.8 p.c. had previously been home owners.

The average price of NHA-financed houses purchased in 1966, including many started in the previous year, was \$17,945. On these houses, purchasers provided down-payments averaging \$3,544 and undertook monthly payments of \$129.70 for mortgage principal, interest and taxes; compared with 1965, these represented increases of 8.6 p.c. in price, 18.2 p.c. in down-payment and 9.4 p.c. in monthly charges. The proportion of monthly charges to income remained unchanged at 21.4 p.c.

As in other years, most of the NHA-financed houses purchased in 1966 were bungalows, which type represented 72.0 p.c. of the total compared with 75.0 p.c. in 1965. The proportion of split-level dwellings increased from 17.0 p.c. to 17.9 p.c. and that of two-storey dwellings from 7.1 p.c. to 9.8 p.c. Of these dwellings, about 80 p.c. had three bedrooms and the remainder had four or more.

Loans to Non-profit Corporations and Limited-Dividend Companies.—In 1966, 73 loans in an aggregate amount of \$20,900,000 were approved to non-profit corporations to assist in the construction of 1,612 self-contained units of low-rental housing and hostel accommodation for 1,803 persons. With the exception of a small number for special groups, all loans were for projects for elderly persons.

Home Improvement Loans.—There was a slight decline in the volume but a slight increase in the value of NHA-guaranteed bank loans for home improvement purposes in 1966. Loan approvals during the year numbered 18,042 for \$35,900,000 as against 18,846 and a value of \$35,600,000 in 1965. At the end of 1966, the outstanding debt on such loans was reported by the banks at \$75,300,000 compared with \$73,200,000 a year earlier. The Home Improvement Loan Insurance Fund, comprised of fees received from borrowers, increased by \$156,000 during the year to reach \$3,200,000 at Dec. 31, 1966.

Loans for Student Housing Projects.—Loans totalling \$49,900,000 were approved in 1966 for 30 student housing projects providing accommodation for 7,670 students, an

increase over 1965 activity when assistance was authorized for developments housing 4,547 students. Loans approved in 1966 were distributed provincially as follows:—

Province	Loans		Students to be Accommodated
	No.	Amount \$'000	
Newfoundland.....	2	4,394	827
Nova Scotia.....	4	4,878	707
New Brunswick.....	1	280	40
Quebec.....	4	4,285	764
Ontario.....	12	24,103	4,085
Saskatchewan.....	1	362	132
Alberta.....	2	5,165	497
British Columbia.....	4	6,464	618

From December 1960, when university housing loans were first authorized, to December 1966, 142 loans totalling \$179,000,000 were approved for the construction of residences for 33,909 students. The statutory limit that may be advanced for such loans is \$350,000,000.

Loans for Municipal Sewage-Treatment Projects.—During 1966, 184 loans amounting to over \$35,700,000 were authorized to assist 141 municipalities to undertake sewage-treatment projects, distributed provincially as follows:—

Province	Loans		Province	Loans	
	No.	Amount \$'000		No.	Amount \$'000
Newfoundland.....	6	513	Ontario.....	53	17,482
Prince Edward Island....	2	67	Manitoba.....	15	1,263
Nova Scotia.....	3	344	Saskatchewan.....	25	993
New Brunswick.....	4	470	Alberta.....	21	706
Quebec.....	41	9,926	British Columbia.....	14	3,966

From December 1960, when assistance for sewage-treatment projects was authorized, to December 1966, 1,116 loans totalling \$208,000,000 were approved to 763 municipalities.

Mortgage Marketing.—Sales of NHA-insured mortgages amounted to \$88,300,000 in 1966 compared with \$136,400,000 in 1965. Because of heavy pressure on the market for long-term funds, auctions were not held by the Corporation during 1966; total sales by the Corporation to the end of 1965 totalled \$308,600,000. Under Sect. 11 of the National Housing Act, holders of NHA mortgages may be provided with a source of short-term credit if required; during 1966 two short-term loans were made. Repayments during the year totalled \$18,000,000 and the balance outstanding at year-end was \$10,600,000.

Urban Renewal.—Activity under the urban renewal provisions of the National Housing Act was at an all-time high in 1966. During the year the Corporation approved loans totalling \$697,202 to 61 municipalities to undertake urban renewal studies: two in Nova Scotia, one in New Brunswick, 24 in Quebec, 12 in Ontario, three in Manitoba, 11 in Saskatchewan, seven in Alberta and one in British Columbia. Included was a grant of \$120,000 to Quebec to assist in identifying blighted areas in 18 municipalities. In 1965, 21 grants totalling \$324,470 were approved for urban renewal studies.

Federal contributions totalling \$394,770 were approved during 1966 for the preparation of 24 urban renewal schemes, including initial amounts for the communities of Sydney in Nova Scotia; Quebec City, Ste. Agathe des Monts, St. Jérôme, Victoriaville and Westmount in Quebec; Fort William, Neelon-Garson Township (Sudbury area), Newmarket, Niagara Falls and Toronto in Ontario; North Battleford and La Ronge in Saskatchewan; Edmonton, High River and Medicine Hat in Alberta; and Alert Bay, Ladner, Port Coquitlam and Victoria in British Columbia. In the implementation of urban renewal schemes during 1966, the federal contribution was \$13,335,000 compared with \$3,209,000 in 1965. This included initial grants for Montreal and Trois-Rivières in Quebec; Ottawa and

Toronto in Ontario; Calgary in Alberta; and Burnaby, Natal, Trail, Vancouver and Victoria in British Columbia. In addition, loans totalling \$1,100,000 were made to the cities of Calgary, Trail and Victoria to assist further in the implementation of these schemes; 1966 was the first year in which such loans were made.

Public Housing.—During 1966, approval was given for federal-provincial housing projects located in Corner Brook in Newfoundland; Sydney and Yarmouth in Nova Scotia; Winnipeg in Manitoba; Melfort and Prince Albert in Saskatchewan; and Drumheller, Fort McMurray and Peace River in Alberta. These will provide 604 dwelling units. During the previous year, 324 units in four projects were approved. To the end of 1966, approval had been given for 13,088 rental units under the federal-provincial partnership arrangement. Of these, 10,474 are subsidized at rents related to the income of the tenants and the remainder are leased at fixed rents related to dwelling size and at levels sufficient to recover capital costs and meet operating expenses. The Federal Government's 75-p.c. share of the subsidized units, approved in 1965 but paid in 1966, was \$2,100,000.

Under arrangements with the Provinces of Nova Scotia and Prince Edward Island and their housing commissions, assistance may be given under the National Housing Act for co-operative house-building. In 1966, projects were approved for 66 units in Nova Scotia, the total approved in that province since the inception of the program in 1953 being 1,331 units. Since 1960, 119 units have been approved under similar arrangements in Prince Edward Island. In April 1965, agreement was reached between the Federal and Saskatchewan Governments for a joint program to provide housing for metis and enfranchised Indians in sparsely settled regions of northern Saskatchewan. During 1966, 24 units were approved, bringing the total to 36 located at Air Ronge, Beauval, Buffalo Narrows, Cumberland House, Île à la Crosse and La Ronge.

Loan assisted projects numbering 70 valued at \$59,200,000 were approved to Ontario Housing Corporation for 4,583 units. The projects are located in the municipalities of Arnprior, Barrie, Belleville, Brantford, Chelmsford, Galt, Guelph, Gore Bay, Hamilton, Kingston, Kitchener, Lindsay, Listowel, Metropolitan Toronto, Niagara Falls, Oshawa, Ottawa, Penetanguishene, Peterborough, Prescott, Owen Sound, Richmond Hill, Port Arthur, St. Thomas, St. Catharines, Sault Ste. Marie, Sudbury, Teck Township, Waterloo and Windsor. In 1965, 47 such loans were approved at a cost of \$36,100,000, providing 2,919 units. The estimated annual 50-p.c. federal contribution toward operating losses for such projects was \$1,400,000 in 1966. In the two and a half years that it has been in force, this legislation has resulted in the approval of 117 projects for 7,502 units.

Land Assembly.—Eight land assembly projects for 1,792 residential building lots were approved in 1966 under federal-provincial partnership agreements as follows: Marystown, Nfld. (237 lots), Amherst, N.S. (100 lots), Nackawic, N.B. (671 lots), Brockville, Ont. (324 lots), Hamilton, Ont. (213 lots), Longlac, Ont. (84 lots), Shaunavon, Sask. (89 lots), and Unity, Sask. (74 lots). In addition, the second phase of a project in St. John's, Nfld. (327 lots), was approved. During 1965, 662 lots were approved for development, the total from the inception of the program in 1948 to 1966 being 21,048 lots. Of the latter, 13,818 have been placed in a sales position and 12,667 have been sold.

Subsection 3.—Housing Statistics of the Census

Data collected at the 1966 Census relating to tenure and structural type of dwellings in Canada were not available in time to be summarized in this edition of the Year Book. These data, when published, will include cross-classifications as to household composition as well as characteristics relating to the household in Vol. II of the 1966 Census (Catalogue Nos. 93-601 to 93-608) and in the Census Special Series report No. 99-602. Brief data on housing characteristics for Canada in 1951 and 1961 are given in the 1967 Year Book at pp. 728-729, and detailed information may be found in Vol. II (Part 2) of the 1961 Census (Catalogue Nos. 93-523 to 93-534).

Section 1.—The Government in Relation to Labour

Subsection 1.—The Canada Department of Labour and the Federal Department of Manpower and Immigration

The Canada Department of Labour

The Canada Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds. Since that time the Department has been charged with the administration of new legislation and has taken on new functions. Its work fell broadly into two main areas—industrial relations and manpower supply—until Jan. 1, 1966, when all manpower activities were transferred to a new Department of Manpower and Immigration (see p. 747).

The legislation now administered by the Canada Department of Labour in the industrial relations area applies to employers, workers and trade unions under federal jurisdiction. The Department is responsible for conciliation procedures in industrial disputes, the investigation of complaints of unfair labour practices, refusals to bargain and violations of legislation, the processing of applications for the certification and de-certification of trade unions and the conducting of representation votes. It determines wage rates and hours of work in Federal Government contracts for construction or supplies, and promotes joint labour-management consultation. It also administers legislation to prevent discrimination in employment based on race, religion, colour or national origin and to provide for equal pay for female employees. In 1965, the Canada Labour (Standards) Code became law. The Code establishes minimum standards of wages, hours of work, vacations with pay and paid general holidays in industries under federal

* Except as otherwise noted, this Chapter has been revised under the direction of the Deputy Minister of the Canada Department of Labour, Ottawa.

jurisdiction. To ensure safe working conditions for all employees in industries and undertakings coming under federal jurisdiction, the Canada Labour (Safety) Code was passed by Parliament at the end of 1966 and was proclaimed in effect Jan. 1, 1968.

Since 1947, the Canada Department of Labour has encouraged and assisted in the establishment of labour-management committees in industry and services. With considerable expansion in this work in 1966, the service was reorganized and became a separate Branch of the Department, namely, the Labour-Management Consultation Branch. There are now 2,237 active committees whose efforts are directed to such subjects as improving work methods, safety, operating efficiency, plant maintenance, eliminating waste, maintaining good morale, promoting educational and training activities and joint consultation on operational changes brought about by technological change.

Research, involving regular and special surveys and analyses of economic and social trends affecting the labour force, is an important part of the Department's work carried out by the Economics and Research Branch. It studies wages and working conditions, union organization, collective bargaining, industrial relations, labour standards and safety. Through the Women's Bureau, it investigates the problems of women in the labour force. It operates a plan of workmen's compensation for seamen on Canadian ships and arranges workmen's compensation for Federal Government employees. In addition to the publication of statistical reports and the results of research studies, the Department publishes the monthly *Labour Gazette*, maintains records of labour legislation in the provinces and in other countries and operates a labour lending library. It provides liaison between the International Labour Organization and the federal and provincial governments and is responsible for the administration of Canadian Government annuities.

The Department of Manpower and Immigration*

This Department was constituted in January 1966 by the Government Organization Act (RSC 1966, c. 25), which was proclaimed effective on Oct. 1, 1966, under the Minister of Manpower and Immigration. Its immigration responsibilities were, until the latter date, part of the Department of Citizenship and Immigration which was renamed the Department of Manpower and Immigration, and most of the other components of the new Department were under the jurisdiction of the Department of Labour.

The Department of Manpower and Immigration is composed of two operational Divisions and four support services. The functions of the Canada Immigration Division, which administers the Immigration Act and Regulations, are outlined in the Immigration and Citizenship Chapter at pp. 230-231. The Canada Manpower Division, outlined below is responsible for: the counselling and effective placement of workers; the recruitment and placement of workers to meet industry's requirements; the occupational training of adults; manpower mobility; creation of seasonal demand for labour to stabilize employment; community adjustment of migrants and immigrants; and the rehabilitation of vocationally handicapped workers. The Department also has a service which is responsible for the development and evaluation of departmental programs; research; the operation of pilot projects in training and other areas; legislation and legal services; and emergency manpower planning at the national level. Other support services are Financial and Management, Personnel, and Information.

Canada Manpower Division.—The *Program Support Branch* provides an advisory and consultative service to the Assistant Deputy Minister—Manpower and to the regional manpower officials on matters relating to the Occupational Training for Adults Program, which provides for the training and retraining of adults to meet labour market requirements, and the Manpower Mobility Program, which assists individuals to find jobs in these communities, to move their families and to buy or sell a home. The administration of these programs takes place on a regional basis and through approximately 250 local

*Prepared by the Information Service, Department of Manpower and Immigration, Ottawa.

Canada Manpower Centres. The Branch is responsible for inter-regional co-ordination and for headquarters activities relating to the development of standards, curricula and training aids techniques and also for operational guidelines and policy relating to the successful implementation of Branch programs and manpower development generally.

The *Counselling Support Branch* has responsibility in seven major areas—family relocation, immigrants and migrants, settlement, counsellor development and training women's employment, youth, and co-ordination of university training for manpower counsellors. These services are intended to ensure that manpower resources are properly utilized.

The *Employment Stabilization Branch* administers the Municipal Winter Works Incentive Program under which the Federal Government provides an incentive to municipalities to undertake public works during the winter by sharing in the payroll costs incurred on approved projects. All provinces and territories and a number of Indian bands participated in the program during the period Nov. 1, 1966 to Apr. 30, 1967. In general, the Federal Government paid 50 p.c. of the direct payroll costs of approved projects but municipalities in certain areas of high winter unemployment received 60 p.c.; total federal expenditure for the 1966-67 period approximated \$37,000,000 on 5,296 project applications accepted from 2,304 local authorities. Work was provided on-site for an estimated 122,413 men for a total of 5,766,540 man-days. A Government-sponsored winter employment campaign was conducted again during 1966-67.

Under the Supplementary Federal Government Winter Construction Program introduced in 1963-64, federal departments brought forward construction projects for which funds had not been provided in current departmental estimates and the funds were then made available from a miscellaneous vote. This program was discontinued in 1966-67 because of the increase in the volume of construction planned for the year but the Cabinet directed that, wherever possible, construction projects be deferred to the winter season to ensure that at least half of the total program be carried out from November to April inclusive. The total cost of the construction program for 1966-67 was approximately \$294,500,000, of which 54 p.c. was spent between Nov. 1 and Apr. 30.

The main functions of the *Technical Services Branch* are to develop, implement and co-ordinate policies and techniques relating to occupational identification, description and classification, and job analysis and specification; to develop psychological, aptitude and achievement tests for use in counselling and selection of persons for jobs; to develop policies and techniques for use in the selection of workers in large-scale operations; and to design information retrieval capabilities to facilitate the matching of job applicants with job vacancies from national inventories, and for reporting of operational data.

The *Operational Support Branch* is concerned with programs related to manpower demands; with the effective development and utilization of manpower for all sectors of the Canadian economy; and with the development of constructive solutions to manpower problems created by technological and economic changes. To accomplish its objective the Branch stimulates and encourages advance manpower planning through consultation with senior officials in industry; with industrial, trade and employee associations; and with other departments of the Federal Government and provincial and municipal governments. The Branch also provides expertise on the day-to-day operation of the labour market and is a clearing house for proposals to facilitate the effective placement of workers. It is able to assist in the advance identification of changes affecting the functioning of the labour market and participates in the planning of orderly and effective movement and readjustment of workers in both the private and public sectors.

The *Program Development Service* has responsibility for departmental functions related to research, statistical services, manpower information and labour-market analysis, experimental projects and legislation. Its basic purpose is to assist the two operating Divisions of the Department in evaluating existing programs and developing new or revising existing programs to ensure the most effective means of supporting department policy both in the field and in the headquarters offices of the Department.

The *Vocational Rehabilitation Branch*, through the Regional Manpower Offices, administers the Vocational Rehabilitation of Disabled Persons Act, 1961, under which the Federal Government shares equally with participating provinces in the costs of vocational rehabilitation services to handicapped persons. Staff training is arranged by the Branch and federal financial assistance is given to participating provinces for the training of their rehabilitation staffs. Research projects in the fields of vocational rehabilitation and disadvantaged workers are financed by federal funds when conducted by a federal agency. University research projects in the same areas may be assisted through the Manpower and Immigration Research Grants Program or, if carried out by a participating province, on a cost-sharing basis under the Federal-Provincial Vocational Rehabilitation Program. The Branch maintains liaison with rehabilitation authorities in other countries and with international organizations. The Branch, through its Section on Older Workers, studies developments in the field of aging which relate to employment, both in Canada and in other countries, and carries out a continuing educational program designed to create a more favourable employment climate for middle-aged and older workers.

Subsection 2.—Federal Labour Legislation and Provincial Labour Legislation

Federal Labour Legislation*

Fair Wages Policy.—The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act (RSC 1952, c. 108), as amended by an Act to amend the Fair Wages and Hours of Labour Act, effective Apr. 1, 1967 (RSC 1967, c. 24), and by the Fair Wages and Hours of Labour Regulations. Hours of work on construction contracts are limited to eight a day and 48 a week, except in exceptional circumstances approved by the Minister or in such cases as the Governor in Council may prescribe; hours worked in excess of eight in a day or 40 in a week must be paid for at an overtime rate at least equal to one and one half times the rates required under the contract; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour; in no case shall the rates be less than the minimum hourly rate prescribed by or pursuant to the Canada Labour (Standards) Code.

Wages and hours of work on contracts for equipment and supplies are regulated by Order in Council PC 1954-2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed.

The Fair Wages and Hours of Labour Regulations and Order in Council PC 1954-2029 both contain a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

The Industrial Relations and Disputes Investigation Act.—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more

* The Act establishing the Canada Labour (Safety) Code (SC 1966-67, c. 62), proclaimed in effect Jan. 1, 1968, provides for the consolidation, under the title "Canada Labour Code", of the five Acts described under this heading.

provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are set down in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes. The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith. The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Canada Department of Labour.

Canada Fair Employment Practices Act.—This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction—those covered by the Industrial Relations and Disputes Investigation Act (see above). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies that practise discrimination; and the use of advertisements or inquiries in connection with employment that express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.—This Act came into effect on Oct. 1, 1956 and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Canada Labour (Standards) Code.—This Act received Royal Assent on Mar. 18 1965 when the administration and general provisions of Part V came into effect. The Act provides, in Parts I to IV which came into force on July 1, 1965, minimum standards with respect to hours of work, minimum wages, annual vacations and general holidays in industries under federal jurisdiction; the Annual Vacations Act 1958 was repealed.

The standard hours of work are eight a day and 40 a week, with maximum hours of 48 a week. Overtime pay at not less than time-and-one-half is required for all hours worked in excess of the standard hours. Permits are required in order to work more than 48 hours a week. Where the nature of the work necessitates irregular distribution of hours of work, the hours may be averaged over a period of two weeks or more.

The minimum wage is \$1.25 an hour for all persons 17 years of age or over and the minimum wage for persons under 17 years of age is \$1.00 an hour. Special rates may be set for persons receiving training on-the-job and for disabled or handicapped persons.

Employees are entitled to a two-week vacation with pay after one year of employment, with vacation pay calculated at 4 p.c. of wages. The general holidays are eight in number and every employee is entitled to a holiday with pay on each of them, or substitutes for them. Pursuant to an amendment to Part IV of the Code, the Multi-employer Employment (Longshoring) Regulations have been passed to provide for the granting of pay in lieu of general holidays to longshoremen in multi-employer employment who previously could not qualify for general holiday benefits because they did not have sufficient employment with one employer.

The Code has special and transitional provisions. Any person may make a submission (under Sect. 51) for deferment or suspension of Part I (Hours of Work). The Minister may grant deferment or suspension where it can be shown that the application of Part I is or would be prejudicial to the interests of the employees or detrimental to the operation of the business. The Minister's order to defer or suspend may be for a period up to but not exceeding 18 months from the date of the order, and the order may or may not contain conditions on hours. A further deferment or suspension may be made by the Governor in Council but only after there has been an inquiry, and the order of the Governor in Council must contain conditions on hours of work. Regulations have been enacted to carry out the purposes of the Code.

Canada Labour (Safety) Code.—This Code, which received Royal Assent in late 1966 and was proclaimed in effect as of Jan. 1, 1968, is the first safety legislation to be passed by the Parliament of Canada. Its primary purpose is to ensure safe working conditions for all employees in industries and undertakings under federal jurisdiction. The main features of the Code are that: (1) it provides for all the elements of a complete industrial safety program; (2) it sets out the general obligation of employers and employees to carry out their functions and duties in a safe manner and authorizes the making of regulations for dealing with the problems of occupational safety; (3) it does not override but complements other federal laws and provincial legislation, thus strengthening the safety movement; (4) it authorizes full use of advisory committees and special task forces in the drawing up and administering of regulations, to be done under continuous consultation among federal and provincial government departments, industry and organized labour; and (5) it provides for research into causes and prevention of accidents and for an extended program of safety education.

Provincial Labour Legislation

Because of the authority given by the British North America Act to the provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights in the province, power to enact labour legislation is largely the prerogative of the provinces. Since it imposes conditions on the rights of the employer and employee to enter into a contract of employment, labour legislation is, generally speaking, law in relation to civil rights. Under this authority, the provincial legislatures have enacted a large body of legislation affecting the employment relationship in such fields as working hours, minimum wages, the physical conditions of workplaces, apprenticeship and training, wage payment and wage collection, labour-management relations, workmen's compensation and other matters. In each province a Department of Labour is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a Workmen's Compensation Board appointed by the Lieutenant-Governor in Council.

Minimum Wages.—As a means of ensuring adequate living standards for workers, all provinces have enacted minimum wage legislation. These laws vest in a minimum-

wage-fixing board authority to set or recommend minimum wages for employees. In most provinces minimum wage orders now cover almost all employment except farm labour and domestic service. Minimum rates set by the orders apply throughout the provinces except in Nova Scotia, Quebec and Saskatchewan. Nova Scotia is divided into three zones for minimum wage-setting purposes; in Quebec there are two zones. In Saskatchewan minimum rates vary between urban and rural areas. Except in Newfoundland, Nova Scotia and Prince Edward Island, the same rates are set for both sexes. The British Columbia board issues a separate order for each industry or occupation and a general order for employees not so covered. In the other provinces, minimum wage boards issue general orders, supplemented by special orders in some cases.

Hours of Work.—Five provinces have general hours-of-work laws. Those of Ontario, Alberta and British Columbia set limits on hours of work. Hours are limited in Alberta and British Columbia to eight a day and 44 a week, and in Ontario to eight a day and 48 a week. The Manitoba and Saskatchewan Acts regulate hours through the requirement that one and one half times the regular rate must be paid if work is continued after specified limits. The Manitoba law requires payment of the overtime rate after eight and 48 hours for men and eight and 44 hours for women. The Saskatchewan Act requires payment of the overtime rate after eight and 44 hours. Some exceptions are provided for in all five Acts. Hours of work are regulated for particular classes of workers or for some industries in all provinces under other legislation.

Regulation of Wages and Hours in Certain Industries.—Industrial standards legislation is in effect in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta. These laws provide that a schedule of wage rates and hours of work agreed upon by a representative group of employees and employers in an industry or trade may, upon approval by the government, be given statutory effect by Order in Council, and so become the minimum terms of employment for the entire industry or trade in the area. An advisory committee, usually equally representative of employers and employees, is established to assist in enforcing a schedule. This legislation is used fairly extensively in the building trades, the clothing industries, barbering and a few other industries. In Newfoundland, Nova Scotia and New Brunswick schedules have been issued only for certain construction trades in some areas. In Ontario, schedules for the garment trades, the fur industry and the hard furniture industry apply throughout the province and a substantial number of schedules apply to various construction trades and to barbering in specified areas.

Under the Quebec Collective Agreement Act, certain terms of a collective agreement, including those dealing with hours and wages, may be made binding on all employers and employees in the industry concerned in a defined area, provided the parties to the agreement represent a sufficient proportion of the industry. The standards made binding under this procedure are contained in a decree, which has the force of law. Approximately 100 decrees applying to construction, manufacturing, barbering and hairdressing, commercial establishments and other industries and services are in effect covering close to 250,000 employees. Of these decrees, 16 apply throughout the province.

The Construction Industry Wages Act in Manitoba provides for the setting of minimum rates of wages and maximum hours of work at regular rates for employees in the construction industry, on the recommendations of a board equally representative of employers and employees, with a public member as chairman. Under this Act, annual schedules set the regular work week and hourly rates of wages for various classifications of workers in the heavy construction industry, the Greater Winnipeg building construction industry, and in rural building construction.

Annual Vacations and Public Holidays.—All provinces except Newfoundland have annual vacations legislation applicable to most industries. In Prince Edward Island, New Brunswick and Quebec, workers are entitled to a vacation with pay of one

week after a year of service; in Ontario, workers are entitled to a vacation of one week after each of the first three years of employment, and of two weeks after the fourth and each subsequent year. In Nova Scotia and in the four western provinces, the annual paid vacation required by law is two weeks and, in Saskatchewan, three weeks after five years of service.

The Provinces of Alberta, British Columbia, Manitoba, Nova Scotia and Saskatchewan have enacted legislation of general application dealing with public holidays. The number of holidays named varies from five to eight, and the provisions for payment also vary.

Anti-discrimination Laws.—Eight provinces have adopted fair employment practices laws forbidding discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. In addition, in British Columbia and Ontario, discrimination in employment and trade union membership on grounds of age is prohibited. Eight provinces have equal pay laws that forbid discrimination in rates of pay solely on the basis of sex, and the Quebec statute respecting discrimination in employment forbids discrimination in employment on the basis of sex.

Accident Prevention and Workmen's Compensation.—Factory or industrial safety Acts in most provinces establish safeguards for the protection of the health and safety of workers in factories and other workplaces with respect to such matters as sanitation, heating, lighting, ventilation and the guarding of dangerous machinery. Long-established laws regulating the design, construction, installation and operation of mechanical equipment, such as boilers and pressure vessels, elevators and lifts and electrical installations, have been revised in recent years in line with technological changes, and legal standards have been set in new fields involving hazards to workers and the public, such as the use of gas- and oil-burning equipment. This legislation also prescribes standards of qualification for workers who install, operate or service such equipment. Laws requiring safety standards to be observed in construction and excavation work are in force in most provinces.

Workmen's compensation legislation providing a system of collective liability on the part of employers for accidents occurring to employees in the course of their employment are in force in all provinces. Workmen's compensation laws are described in greater detail on p. 786.

Labour Relations.—In all provinces, there is legislation similar in principle to the federal Industrial Relations and Disputes Investigation Act, designed to establish equitable relations between employers and employees and to facilitate the settlement of industrial disputes. These laws guarantee freedom of association and the right to organize, establish machinery (labour relations boards) for the certification of a trade union as the exclusive bargaining agent of an appropriate unit of employees, and require an employer to bargain with the certified trade union representing his employees. Except in Saskatchewan, they require the parties to comply with the conciliation procedures laid down in the Act before a strike or lockout may legally take place, and they provide also that every collective agreement must contain provision for the settlement of disputes arising out of the agreement, and prohibit strikes and lockouts while an agreement is in effect. All prohibit defined unfair labour practices and prescribe penalties.

In most provinces, certain classes of employees who are engaged in essential services, such as policemen and firemen, are forbidden to strike and, in lieu of the right to strike, have recourse to final and binding arbitration. There are special provisions relating to hospital disputes in six provinces.

Certification of Qualified Tradesmen.—All provinces have apprenticeship laws providing for an organized procedure of on-the-job training and school instruction in designated skilled trades, and statutory provision is made in most provinces for the issuing of certificates of qualification, on application, to qualified tradesmen in certain trades. In some provinces, legislation is in effect making it mandatory for certain classes of tradesmen to hold a certificate of competency.

Changes in 1967.—Significant developments in provincial labour legislation taking place in the year 1967 are described below.

Minimum Wages.—General minimum wage rates were increased in five provinces during 1967. The minimum rates in effect at the beginning of 1968 for experienced workers in certain cities are shown in Table 1.

1.—Minimum Wage Rates for Experienced Workers in Certain Cities, by Sex, Jan. 1, 1968

⁴ 90 cents an hour for male workers in food processing plants.

⁵ Dollars a week for waitresses; \$16 for other restaurant workers.

⁶ Dollars a week.

Annual Vacations and Public Holidays.—Prince Edward Island enacted its first Vacation Pay Act, giving workers the right to an annual vacation with pay of one week after a year of employment. The Nova Scotia Legislature increased the duration of the vacation to which workers are entitled under the Vacation Pay Act from one week to two weeks after a year of service. In line with this change, vacation pay was increased from 2 p.c. to 4 p.c. of earnings. The Quebec vacation with pay order (No. 3) was revised, bringing several new classes of workers within its scope. In British Columbia, the Board of Industrial Relations issued its first holiday order, requiring employers to give their employees eight paid general holidays a year.

Anti-discrimination Measures.—New Brunswick consolidated its fair employment practices and fair accommodation practices laws in one statute, the Human Rights Act, and established a five-member New Brunswick Human Rights Commission to administer the Act, subject to the control of the Minister of Labour. In both New Brunswick and Ontario, exemptions of employers with fewer than five employees were removed from fair employment practices legislation. The Nova Scotia Legislature set up a Human Rights Commission to co-ordinate human rights activities within the province and to act as a research, advisory and promotional body in the general field of human rights. A similar amendment was made to the equal pay legislation of both Nova Scotia and Prince Edward Island, making it compulsory for employers to pay female employees the same rate of wages as male employees when they are required to do substantially the same work in the same establishment; the word "substantially" was added.

Industrial Safety.—Nova Scotia passed the Construction Safety Act, the first legislation in the province aimed specifically at the safety of workmen in the construction

industry; the new Act applies to all types of construction projects including road-building, pipeline construction, wharf structures, tunnels, and buildings, whether carried on by the government or private employers. In both Ontario and Quebec, regulations were issued providing employees on construction projects where complex falsework is used with better protection against accidents. A new Mines Regulation Act applying to metalliferous mines replaced the former legislation in British Columbia. The mines safety rules were revised and expanded and, among other changes, a new class of inspectors to be known as Environmental Control Inspectors will have the duty of inspecting ventilation, dust and noise control.

Workmen's Compensation.—Benefits under workmen's compensation Acts were increased in five provinces. Widows' pensions were increased from \$75 to \$100 a month in Newfoundland and Quebec. In Quebec, the lump sum payable to a widow was also increased—from \$300 to \$500. In Newfoundland, Prince Edward Island and Quebec, monthly allowances to dependent children were raised and, in Manitoba and Newfoundland, the age to which benefits may be continued for educational purposes was extended. In British Columbia, monthly pensions and allowances to dependent widows and children were increased in accordance with a formula under which these payments are tied to the Consumer Price Index. Maximum annual earnings on which compensation may be paid were raised from \$6,000 to \$6,600 in Manitoba and from \$5,000 to \$6,000 in Quebec.

Labour Relations.—Amendments to the Industrial Relations Act of Prince Edward Island brought the main certification provisions into line with those in other jurisdictions and provided for the use of industrial inquiry commissions. In Nova Scotia, an amendment to the Trade Union Act provided that the Labour Relations Board is not required to grant a separate certification to a craft or technical unit if it is included in a bargaining unit represented by another bargaining agent at the time the application is made. Previously, the board was required to grant a separate certification for such a group if the unit were otherwise suitable for collective bargaining. Also in Nova Scotia, a new Act provided for a negotiation system for provincial civil servants. Emergency legislation was enacted in Quebec involving teachers and transport workers and in Newfoundland involving hospital workers. In Quebec, An Act to Ensure for Children the Right to Education and to Institute a New Schooling Agreement Plan brought to an end a strike of teachers and prepared the way for province-wide negotiations. Also during the year, a special session of the Quebec legislature passed legislation to bring to an end a strike of employees of the Montreal Transportation Commission. The legislation required the employees to return to work and required the parties to resume negotiations with the assistance of a mediator. Failing settlement the dispute was to be submitted to arbitration. After some hospital workers had gone on strike in defiance of an order proclaiming a state of emergency, the Newfoundland legislature passed an Act which banned strikes by hospital workers in that province.

Section 2.—The Labour Force*

Since 1946, reliable information for analysis of employment in Canada, at the national level and for the five major regions, has been provided through a labour force survey. Between November 1945 and November 1952, quarterly surveys were undertaken and since then the survey has been carried out on a monthly basis. The sample used in the survey has been designed to represent all persons in the population, 14 years of age or over, residing in Canada, with the exception of residents of the Yukon and Northwest Territories, Indians living on reserves, inmates of institutions and members of the Armed Forces. Interviews are carried out in approximately 35,000 households chosen by area sampling methods across the country.†

*Prepared in the Special Surveys Division, Dominion Bureau of Statistics.

†A comprehensive description of the survey is given in DBS publication *Canadian Labour Force Survey—Methodology* (Catalogue No. 71-504).

In the labour force survey, persons are classified on the basis of their activity during the week prior to the survey interview week. This week is called the reference week. The main divisions in the classification are:—

Labour Force.—The civilian labour force is composed of that portion of the civilian non-institutional population, 14 years of age or over who, during the reference week, were employed or unemployed.

Employed.—The employed include all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; (c) had a job, but were not at work, because of bad weather, illness, industrial dispute or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed.—The unemployed include all persons, who, through the reference week: (a) were without work and seeking work, i.e., did no work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force.—Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed, or if they looked for work as unemployed.

The estimates derived from the labour force survey, which are based on a sample of households, are subject to sampling error. Somewhat different figures might be obtained if a complete census were taken and this difference is called the sampling error of the estimates. In the design and processing of the labour force survey, extensive efforts are made to minimize the sampling error; in general, the percentage of error tends to decrease as the size of the estimate increases. A statistical measure of the sampling error is given in DBS monthly publication *The Labour Force* (Catalogue No. 71-001).

2.—Estimates of the Civilian Labour Force and its Main Components, Annual Averages, 1946 and 1956-67

NOTE.—Comparable figures for 1947-55 are given in the 1962 Year Book, p. 708. Figures do not include inmates of institutions and Indians on reservations.

of institutions and Indians on observations.

¹Excludes Newfoundland.

Characteristics of the Civilian Labour Force 1946-67.—The civilian non-institutional population averaged 13,874,000 in 1967 compared with 8,779,000 in 1946, an increase of 58.0 p.c., and during the same period the labour force increased 59.3 p.c. to 7,694,000. As a result, the proportion of the population 14 years of age or over in the labour force rose from 55.0 p.c. to 55.5 p.c. During the period under review, the Canadian participation rate oscillated between a low of 52.9 p.c. in 1954 and 1955 and a high of 55.5 p.c. in 1967.

An important development in the past two decades has been the steadily declining male participation rate. Such factors as changes in the age composition of the population, an increase in the number of young people deferring their entry into the labour market by remaining in school longer and a greater tendency for workers to retire from the labour force at an earlier age contributed to the drop in the male labour force participation rate from 85.1 p.c. to 77.5 p.c. between 1946 and 1967. These same factors also affected female participation, but to a lesser degree. Of greater significance has been the tendency for women to re-enter or remain in the labour market after marriage. For example, between 1959 and 1967 the labour force participation rate for married women increased from 18.0 p.c. to 28.3 p.c. In 1967, married women constituted 53.3 p.c. of the female labour force and the proportion of women 14 years of age or over in the labour force rose from 23.4 p.c. in 1953 to 33.8 p.c. in 1967. The increased participation of married women was reflected in the participation rates for the groups 25-44 and 45-64 years of age. In the postwar period, the proportion of women 25-44 years of age in the labour force rose from 23.1 p.c. to 35.7 p.c. and those 45-64 years of age from 17.2 p.c. to 35.1 p.c.

Associated with the large entry of women into the labour market has been the increase in job opportunities in the service-producing industries. In 1946, the goods-producing industries and the service-producing industries accounted for about 60 p.c. and 40 p.c., respectively, of total employment; by 1967 these proportions had changed to 41 p.c. and 59 p.c., respectively. There were also significant changes in the distribution of employment within these industry sectors. In 1946, almost one in four employed persons worked in agriculture but by 1967 the ratio had dropped to less than one in 12. Between 1946 and 1967, a slight decline occurred in the proportion of persons employed in manufacturing industries but the relative increase of those employed in trade, finance, insurance and real estate and in service industries was substantial.

Paralleling the shifts in the distribution of employment among industries was a change in the occupational distribution. There was a larger increase in the number of office workers than in the number of craftsmen, production process and related workers in the postwar period, reflecting the changing composition of final output and also the introduction of new methods of production. Table 5 shows that increases occurred in the proportions of persons employed in the managerial, the professional and technical, the clerical, the service and recreational, and the craftsmen, production process and related workers groups in the 1948-67 period. On the other hand, agricultural occupations, in which approximately 22.5 p.c. of all employed persons worked in 1948, accounted for only 7.6 p.c. of employed persons in 1967. Small declines also occurred in the proportions of persons working in the fishing, logging, trapping and mining occupational group and in sales, transportation and communication occupations.

During the 1946-67 period, total employment increased by 58.1 p.c. to 7,379,000; the number of men employed rose by 40.8 p.c. to 5,083,000 and the number of women 117.2 p.c. to 2,296,000. On an annual average basis, unemployment as a percentage of the labour force fluctuated widely during the period, ranging from 2.2 p.c. in 1947 to 7.1 p.c. in 1961; it averaged 4.7 p.c. in 1967. Throughout the period, unemployment rates were substantially lower for women than for men. Persons not in the labour force averaged 6,179,000 in 1967 compared with 3,950,000 in 1946, an increase of 56.4 p.c. Housewives and students together accounted for about 72 p.c. of the 1967 total.

Employment was substantially higher in 1967 than in 1946 in all regions. In British Columbia it increased 85.4 p.c., in Ontario 66.0 p.c., in Quebec 62.1 p.c., in the Prairies 30.7 p.c. and in the Atlantic region (excluding Newfoundland) 17.9 p.c. There was an uneven regional distribution of unemployed persons in 1967. The Atlantic region, which contained only 8.3 p.c. of the total labour force, accounted for 13.3 p.c. of the unemployed, and Quebec, which contained 28.5 p.c. of the labour force, accounted for 36.8 p.c. of the unemployed. Conversely, Ontario and the Prairie region, with 36.8 p.c. and 16.5 p.c., respectively, of the labour force, accounted for only 28.3 p.c. and 9.2 p.c., respectively, of the unemployed. British Columbia had 9.9 p.c. of the labour force and 12.4 p.c. of the unemployed. This uneven distribution, which also prevailed in 1946, was reflected in the regional unemployment rates; in 1967 the annual average unemployment rate in the Atlantic region was 6.6, in Quebec 5.3, in Ontario 3.1, in the Prairies 2.3 and in British Columbia 5.1.

3.—Percentage Distribution of the Population 14 Years of Age or Over in the Labour Force and Non-labour Force Categories, by Sex, 1946 and 1956-67

NOTE.—Comparable figures for 1947-55 are given in the 1962 Year Book, pp. 710-711.

Section 3.—Employment Statistics*

Subsection 1.—Statistics of Employment, Earnings and Hours

Monthly records of employment have been collected from larger business establishments since 1921. At that time a survey was instituted to provide employment index numbers which would serve as current economic indicators. In 1941 the survey was extended to provide information on payrolls and per capita wages and salaries and in 1944 it was further extended to provide data on hours of work and hourly and weekly wages. Also during the war period, separate records for men and women employees were established. Beginning with the January 1966 issues of *Employment and Average Weekly Wages* and *Man-Hours and Hourly Earnings*, the data compiled are on a revised basis. A historical series (Catalogue No. 72-504) provides, on the revised basis, monthly and annual data from 1961-65 and will be extended to provide data from 1957 to this period. The revision has involved the publishing of employment indexes on the time base 1961 = 100 in place of the time base 1949 = 100. All data are compiled on the 1960 standard industrial classification instead of the 1948 standard industrial classification. The new establishment concept of reporting has been introduced with the result that, in a number of cases, activities formerly reported separately are now consolidated into operating entities capable of reporting all elements of basic industrial statistics, including employment and payrolls.

Statistics below the provincial level are compiled for many urban areas using the census definition for metropolitan areas and modified definitions for other urban areas. The survey at present covers establishments with 20 or more employees in any month of the current period rather than, as formerly stated, "those usually having 15 or more employees". The data in Tables 7-14 are presented according to the revised series.

The survey now covers sectors of the following major industry divisions: forestry; mining (including milling); manufacturing; construction; transportation, communication and other utilities; trade; and finance, insurance and real estate. Also included are certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, and recreational and business services. The survey excludes agriculture, public administration and community services such as health and education. The coverage corresponds closely, therefore, to the business sector of the economy. Since the survey does not cover small firms and excludes several industries, the employment records are published in the form of index numbers (1961 = 100).

The monthly employment statistics relate to the number of employees drawing pay in the last pay period in the month. Data are requested for all classes of employees with the exception of homeworkers and casual employees working less than one day in the pay period. Owners and firm members are also excluded. The respondents report the gross wages and salaries paid in the last pay period in the month, before deductions are made for income tax, unemployment insurance, etc. The reported payrolls represent gross remuneration for services rendered and paid absences in the period specified, including salaries, commissions, piece-work and time-work payments, and such items as shift premiums and regularly paid production, and incentive and cost-of-living bonuses. The statistics on hours relate to the straight and overtime hours worked by those wage-earners for whom records of hours are maintained, and also to hours credited to wage-earners absent on paid leave during the reported period. If the reported period exceeds one week, the payroll and hours data are reduced to weekly equivalents.

Employment.—Table 7 shows that, over the five-year period 1962-66, the industrial composite index of employment rose by 20.7 p.c.; service increased by 39.1 p.c., construction by 32.1 p.c., manufacturing by 23.5 p.c., trade by 22.1 p.c. and finance, insurance and real estate by 20.5 p.c. The increase in manufacturing was particularly significant in view of the fact that this industry accounts for over 35 p.c. of industrial employment as measured by the employment survey. Mining, forestry and transportation, communication and other utilities also showed some improvement during 1966.

*Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

7.—Annual Average Index Numbers of Employment by Industrial Division, 1962-66, and Monthly Indexes 1966

NOTE.—These indexes are calculated as at the last pay period of each month, on the base 1961=100.

Weekly Wages and Salaries.—Average weekly wages and salaries have increased substantially in the years for which current payroll statistics have been collected, rising from \$23.44 in 1939 to \$91.01 in 1965 and \$96.30 in 1966. The upward movement gained momentum after the end of the War and average annual increases from 1946 to 1952 were more than twice as great as those between 1939 and 1946. After 1952 the rate of increase, in terms of year-to-year percentage changes, fell slightly below that recorded during the war years, particularly between 1959 and 1962, when average earnings rose at rates of about 3 p.c. per annum. Over the next four years the rate increased moderately and earnings in 1966 were 5.8 p.c. higher than in 1965.

¹ Mainly hotels, restaurants, laundries, dry-cleaning establishments and recreational and business services.

Hours and Earnings of Hourly Rated Wage-Earners.—The monthly survey of employment and payrolls covers statistics of hours of work and paid absence of those wage-earners for whom records of hours are maintained, together with the corresponding totals of gross wages paid. These wage-earners are mainly hourly rated production workers; information on hours is frequently not kept by employers for ancillary workers nor, in many industries and establishments, for any wage-earners. Salaried employees are excluded by definition from the series. As a result of these exclusions, data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.

During the period 1962-66, there was little change in average weekly hours but average hourly and weekly wages rose substantially. For the most part, upward wage-rate revisions in all industries were responsible for the increases. Technological changes, which in many cases involve the employment of more highly skilled workers at the expense of those in the lower-paid occupations, also contributed to the advance of average hourly earnings. From 1962 to 1966, average weekly wages rose 19.4 p.c. in manufacturing, 21.2 p.c. in mining and 33.6 p.c. in construction. Average hourly earnings increased 19.7 p.c. in manufacturing, 19.7 p.c. in mining and 30.7 p.c. in construction. In construction, 1966 average hourly earnings of \$2.81 and average weekly wages of \$118.02 represented increases of 10.6 p.c. and 12.2 p.c., respectively, over the 1965 levels.

Subsection 2.—Earnings and Hours of Work in Manufacturing*

Since 1946 an annual survey of earnings and hours of work in manufacturing has been conducted using (since 1948) the last week of October as the survey week. Information is collected during this normal or representative working week of the year, following generally the same concepts, definitions and coverage as in the larger establishment monthly employment survey. If strikes or other unusual working conditions distort the norm for this week, a more suitable week is substituted. Over the whole period, earnings and hours of work in manufacturing have been reported by sex and category and since 1951 figures have been available for clerical and related workers as distinct from other salaried employees. In addition, the distribution of employees by weekly earnings has been collected periodically since 1950 and the distribution of wage-earners by hours worked or paid for were collected each year from 1946 to 1949 and periodically thereafter.

However, Tables 15 and 16 give figures for 1963-66 only, since at this point there was a break in continuity with previous years. The new establishment concept introduced in 1961 drew into the manufacturing universe some activity reports, such as sales branches, which formerly reported to other industries; these are now coded to manufacturing when they form part of an establishment, the principal activity of which is manufacturing. The survey was not carried out in 1961 and 1962 and revised figures are available only from 1963. Also, it should be noted that the 1966 survey data were collected and compiled on the revised (1960) standard industrial classification basis which classifies the manufacturing industries into 20 major industrial groups, replacing the 17 groups of the 1948 classification system. The new classification is used in Tables 17 and 18.

*More detailed information is given in DBS annual report *Earnings and Hours of Work in Manufacturing* (Catalogue No. 72-204).

15.—Average Earnings of Male and Female Employees in Manufacturing, Survey Week 1963-66, and Percentage Increases over Previous Year

NOTE.—Survey week is the last week of October. This survey was not conducted in 1961 and 1962 (see p. 769).

Subsection 3.—Estimates of Employment*

Estimates of total employment in establishments in the commercial sector of industry were published for the first time in 1965. Results of a monthly survey of employment in a sample of small firms initiated in 1961 were added to data from the long-standing employment and earnings survey to produce estimates of total employment by industrial division.

The estimates of employees are published for those eight major industrial divisions for which monthly and annual data are released in the publication *Employment and Average Weekly Wages and Salaries*. They are considered, for most purposes, to be more reliable indicators of changes of employment than the larger establishment employment indexes. However, the nature of the sample survey does not permit the publication of industry detail below industrial division level nor of geographic detail below the provincial level at this time. It is planned at a later date to extend the estimates to cover all non-agricultural industries.

19.—Estimates of Numbers of Employees, by Industrial Division, 1962-66, and by Month 1966

¹ Includes health services (except hospitals); motion picture and recreational services; services to business management; personal services (except domestic service); and miscellaneous services.

Subsection 4.—Estimates of Labour Income†

Wages and salaries, as shown in Table 20, include living allowances, bonuses, commissions and "tips" and are measured prior to deductions of all kinds (income tax, employees' contributions to the unemployment insurance fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e., free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the

*More detailed information is given in DBS monthly publication *Estimates of Employees by Province and Industry* (Catalogue No. 72-008).

†More detailed information is given in DBS monthly publication *Estimates of Labour Income* (Catalogue No. 72-005).

total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the unemployment insurance fund. Contributions to Armed Forces pension funds are also included.

20.—Wages and Salaries, by Industry, and Supplementary Labour Income, 1962-66, and by Month 1966

NOTE.—Based on the unrevised standard industrial classification. Figures are unadjusted for seasonal variation.

Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and locality, with standard weekly hours of labour, are compiled by the Canada Department of Labour and published in the annual report *Wage Rates, Salaries and Hours of Labour*. The statistics are based on an annual survey covering some 35,000 establishments in most industries and apply to the last normal pay period preceding Oct. 1. Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers for selected occupations are shown separately in the report but are combined in the calculation of industry index numbers shown in Table 21. Predominant ranges of rates for each occupation used are also given; overtime pay is excluded.

The index numbers of Table 21 measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. Information on concepts and methods of developing these statistics is given in the annual report.

21.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1961-66

(1961=100)

NOTE.—Figures for years prior to 1961 are not available on the 1961 base; indexes for 1956-65 on the 1949 base are given in the 1967 Year Book at p. 763 and indexes back to 1901 on the same base appear in the Department of Labour publication *Wage Rates, Salaries and Hours of Labour 1965*.

¹ "Other Industries" consists of logging; mining; transportation (all sectors including air transportation), storage and communication (including radio and TV); public utilities; trade; finance; and government and personal service.

Table 23 gives summary data on working conditions of plant and office employees in manufacturing industries and all industries for the years 1964-66. The percentages in this table denote the proportions that employees—plant or office—of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items. Further details and additional information are given in the annual report *Working Conditions in Canadian Industry*, compiled and published by the Canada Department of Labour and based on a survey at May 1 each year of some 35,000 reporting units.

Wages of Farm Labour.—The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland. The rates presented in Table 24 are average wages paid to all farm help regardless of age and skill. Because the rates reported may cover a wide range of skills, of types of work and of ages of hired workers, the value of the resulting data is considered to be an indicator of trends rather than a measure of absolute wage levels. No attempt has been made to have the wage rates reflect such perquisites as separate housing accommodation, fuel, electricity and food which, under some conditions of hiring, are supplied by employers to their hired farm help.

24.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1965-67

NOTE.—Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

Section 5.—Unemployment Insurance*

During the depression of the 1930s the need for a nation-wide unemployment insurance program became recognized. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, by consent of the provinces, an amendment to the British North America Act was obtained empowering the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance program at the national level and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations. The Act came into effect on July 1, 1941; amended on several occasions, it was replaced by a new Unemployment Insurance Act, effective Oct. 2, 1955.† On Apr. 1, 1965, the operation of the National Employment Service was transferred to the Department of Labour and on Jan. 1, 1966 to the Department of Manpower and Immigration (see pp. 747-749).

Legislation provides for a compulsory insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefit to eligible unemployed persons. The Act is administered by a Commission of three persons appointed by the Governor in Council, of whom one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service** except: the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; hunting and trapping; private domestic service; private-duty nursing; teaching; workers on other than an hourly, daily or piece rate earning more than \$7,800 a year effective June 30, 1968, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a mileage rate) are insured regardless of amount of earnings.

The amount of the employee contribution is determined by the employee's weekly earnings; an equal contribution is required from the employer. The Federal Government contributes one fifth of the aggregate employer-employee contribution and defrays administrative expenses. Contributions became payable on July 1, 1941. Benefit became payable on Jan. 27, 1942 and by Mar. 31, 1967 a total of \$5,414,000,000 had been paid.

The following statement shows the current weekly rates of contribution and benefit effective June 30, 1968. The weekly contribution is based on actual earnings in the week, irrespective of the number of days worked. The benefit rates are calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. In order to qualify for regular benefit, a claimant must have at least 30 weekly contributions in the last 104 weeks prior to claim, eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period, and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

*Prepared by the Unemployment Insurance and Manpower Section, Labour Division, Dominion Bureau of Statistics; statistics of unemployment insurance are compiled and published by the DBS from material supplied by the Unemployment Insurance Commission.

†Copies of the 1955 Act incorporating subsequent amendments are available from the Queen's Printer, Ottawa (Catalogue No. YX92-222/50).

**Commencing Apr. 1, 1957, coverage was extended to persons engaged in fishing, notwithstanding the fact that such persons are not employees of any other person but are usually self-employed; commencing Apr. 1, 1967, coverage is extended to employees engaged in agriculture and horticulture.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT, IN EFFECT FROM JUNE 30, 1968

NOTE.—Weekly rates in effect from Oct. 2, 1955 to June 30, 1968 are given in the 1962 Year Book, p. 738 and the 1967 edition, p. 769.

The Act contains a special provision whereby the regular contribution requirements are relaxed somewhat during a 5½-month period commencing with the first week of December each year. Under this provision, claimants unable to fulfil the contribution requirements for regular benefit may draw "seasonal benefit" if they have at least 15 contribution weeks during the fiscal year or, failing this, if they terminated regular benefit since the previous mid-May.

Statistics on the Operation of the Act.—In order to assess the impact of changing economic conditions on the insurance program, provision is made for collection of current operational data, such as claims filed and processed and payments made. This information is published monthly in the *Statistical Report on the Operation of the Unemployment Insurance Act* (Catalogue No. 73-001). Current claims and payment data are useful for administrative purposes and are also a source of information to the public regarding financial and other aspects of the program.

Persons wishing to draw benefit must file either an initial or a renewal claim. Where it is necessary to compute entitlement to benefit, an initial claim is taken, otherwise a renewal. In the main, initial and renewal claims combined are an approximation of recorded separations from employment during a month. However, if a claimant exhausts his benefit and wishes to be reconsidered for further benefit, an initial claim is required. Such claims, accounting for approximately 15 p.c. of the monthly volume in 1966, are not new cases of disemployment. The count of claimants at the month-end indicates the extent to which claimants maintain contact with local offices of the Commission.

In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are compiled regarding persons employed in insurable employment and benefit periods established and terminated. These data are published in the annual report *Benefit Periods Established and Terminated under the Unemployment Insurance Act* (Catalogue No. 73-201). Data on persons insured under the Act are obtained from a 10-p.c. sample of insurance books and contribution cards renewed at June 1 each year. Included are persons engaged in insurable employment as well as persons on claim at that date.

26.—Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1965 and 1966

Benefit.—The duration of regular benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks. However, contributions more than one year old cannot be used if they have already been taken into account in computing previous rights. Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a

course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.*

Table 27 distributes regular benefit periods terminated by province and shows average weeks and average dollar benefit paid on these terminations. A claimant establishes a regular benefit period when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit and the weekly rate authorized, comprising total entitlement, are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates either when he has exhausted the amount authorized or when 12 months have elapsed since he established, whichever comes first.

* This list should not be considered exhaustive; more detail may be obtained from the Unemployment Insurance Act and Regulations.

Section 6.—Employment Injuries and Workmen's Compensation

Fatal Employment Injuries.—Data on fatal employment injuries, compiled by the Canada Department of Labour, are obtained from provincial Workmen's Compensation Boards, from the Canadian Transport Commission and other government authorities, and from press reports. Of the 1,237 fatal injuries to industrial workers that occurred during 1966, 285 were the result of falls and slips—91 into storage bunkers, 34 from bridges, trestles and catwalks, 22 from platforms, ramps and stationary vehicles, and the remainder caused by other types of falls. There were 284 deaths caused by victims being struck by different objects, and collisions, derailments and wrecks were responsible for 221 deaths. The classification of "caught in, on or between objects, vehicles, etc." accounted for 140 deaths, and conflagrations, temperature extremes and explosions accounted for 62. There were 58 deaths caused by inhalation, contact, absorptions, ingestions and industrial diseases, 51 by contact with electric current, 34 by over-exertion and six by striking against and stepping on objects. The remainder were the result of miscellaneous accidents.

30.—Fatal Employment Injuries, by Industry, 1963-66

Workmen's Compensation.—In all provinces legislation is in force providing for payment of compensation to workmen who are injured by accident arising out of and in the course of their employment or who are disabled as a result of a specified industrial disease. To be entitled to benefits, a workman must be employed in an industry covered by the Act at the time of the injury. Compensation is not payable, however, where the disability lasts less than a stated number of days (varying from one to four in the provincial Acts), or if the injury is due to the workman's own misconduct. A workman who is entitled to compensation has no right of action against his employer for injury sustained during employment.

The Acts provide for a compulsory system of collective liability on the part of employers. Industries covered are divided into classes or groups, according to hazard. Employers are required to contribute to the Accident Fund at a rate fixed in accordance with the accident experience of the class or group. Each class is liable for the costs of all accidents occurring in that class.

The laws apply to enumerated employments but the range of industries covered by each Act is very wide. The principal exceptions are farm workers (who are not covered except in Ontario), domestic servants, casual workers, employees of financial, insurance and professional undertakings, employees of non-profit religious or charitable organizations, and workers in certain service industries in most provinces, for example, barber shops and beauty parlours. Small undertakings, i.e., those with fewer than a specified number of employees, are exempted from the Act in some provinces. Excluded employments may generally be brought under the Act on the voluntary application of the employer.

Benefits for disability are based on 75 p.c. of earnings, subject to an annual ceiling. Where disability is permanent, a life pension is paid, irrespective of future earnings. Medical benefits are provided without limitation, regardless of a waiting period, and rehabilitation services are available where necessary. Where death results from an employment injury, fixed monthly payments are made to dependants.

A federal Act provides for compensation for accidents to Federal Government employees according to the scale of benefits provided by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the federal Merchant Seamen Compensation Act.

¹ Injuries requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces. ² Includes, except where noted otherwise, payments to compensate loss of earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities. ³ Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule I of the Ontario and Quebec Workmen's Compensation Acts.

Section 7.—Organized Labour in Canada

A special article on the "History of the Labour Movement in Canada", prepared by Dr. Eugene Forsey, Director of Research of the Canadian Labour Congress, appears in the 1967 Canada Year Book at pp. 773-781.

Subsection 1.—Union Membership

Union membership in Canada as of Jan. 1, 1967, stood at 1,921,000, continuing the upward trend that has been in evidence since 1962. This figure represented 32.3 p.c. of the non-agricultural paid workers in Canada and 26.1 p.c. of the over-all labour force. The increase in membership between 1966 and 1967 was 185,000 or 10.6 p.c., the major portion of which was attributable to organizing activity of the unions in the favourable environment of an expanding labour force. The 1967 total was also influenced by the addition of 93,000 members of the Public Service Alliance of Canada, which became affiliated with the Canadian Labour Congress on Jan. 1. In the five-year period ended January 1967, union membership in Canada increased by 500,000.

32.—Union Membership in Canada, 1939-67

¹ Figures for years up to and including 1949 are as at Dec. 31; figures from 1951 are as at Jan. 1. Newfoundland included from 1949.

² New-

Membership in unions affiliated with the Canadian Labour Congress (CLC) at the beginning of 1967 totalled 1,451,000, a rise of 13.1 p.c. over the previous year. Affiliates of this central body, including the newly formed Public Service Alliance, comprised slightly more than three quarters of total union membership. Major gains were reported by a large number of CLC affiliates over the year. Among these were: the Canadian Union of Public Employees, with an increase of 16,300 members; the United Steelworkers of America (10,000); the International Brotherhood of Electrical Workers (6,400); the Plumbers (6,000); the Carpenters (5,600); and the International Operating Engineers (4,200). There were other smaller but nevertheless substantial gains.

The Confederation of National Trade Unions (CNTU) reported a total of 198,000 members in 1967, representing an increase of 5 p.c. over the previous year. The largest gains were registered by the *Fédération nationale des services* (Service Employees' Federation) with an increase of 6,200 members and the *Fédération nationale de la métallurgie* (Metal Trades Federation) with 3,600 more members than in 1966.

Of the 1,921,000 union members reported in the 1967 survey, two thirds were in international unions. Of the 110 international unions, 90 were affiliated with both the CLC and the AFL-CIO, seven belonged only to the AFL-CIO, three belonged only to the CLC, and the remaining 10 unions were not affiliated with any central labour body. There were 55 national unions active in Canada, with 576,000 members; 20 of these unions, affiliated with the CLC, accounted for 15 p.c. of total membership. The 13 federations of the CNTU accounted for another 10 p.c. There were, in addition, 22 unaffiliated unions with a total membership of 87,000.

Direct charters from the CLC were held by 155 local unions with a total membership of 17,600 and direct charters from the CNTU were held by 52 local unions with 7,200 members. Membership of the 207 local unions chartered by central labour bodies comprised 1.3 p.c. of all trade union members in Canada. Independent local organizations reported 47,000 members, or 2.5 p.c. of the total.

33.—Union Membership, by Type of Union and Affiliation, as at January 1967

Type and Affiliation	Unions	Locals	Membership
	No.	No.	No.
International Unions.....	110	4,908	1,272,884
AFL-CIO/CLC.....	90	4,447	1,120,401

11	Fédération nationale des services (CSN) Service Employees' Federation (CNTU).....	36,300	11
12	Canadian Brotherhood of Railway, Transport and General Workers (CLC).....	34,900	10

¹ Formed in November 1966.

A complete list of the individual international and national unions, with number of locals and membership in Canada, is carried in the annual Department of Labour publication, *Labour Organizations in Canada* available from the Queen's Printer, Ottawa, price 50 cents.

Subsection 2.—Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from Canada Manpower Centres of the Department of Manpower and Immigration. Table 34 covers strikes and lockouts lasting ten man-days or more. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. The duration in man-days of all work stoppages in a year is also shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada. The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

34.—Strikes and Lockouts, by Industry, 1966 with Totals for 1962-66

NOTE.—Comparable statistics, except for 1961, are given in the corresponding table of previous Year Books; the latter are available in the Canada Department of Labour annual publication *Strikes and Lockouts in Canada*.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by rough, rocky forest terrain such as the New Brunswick-Quebec border region and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence. The extent of its importance can be realized when it is estimated that gross domestic product originating with this industry is roughly 7 p.c. of the total product originating in the economy. Because Canada now has a tremendous capital investment in transport and because this large investment serves a relatively small market for transport services when compared with more heavily populated countries and countries of lesser extent, the provision of integrated and efficient services is a continuing problem to be faced through the application of every innovation and through constant study and research.

PART I.—GOVERNMENT PROMOTION AND REGULATION OF TRANSPORTATION

The Federal Government plays a twofold role in the development of transportation services. One is a promotional role, ensuring the growth and development of the kind of transportation appropriate to the times. The other is a regulatory role, including economic

regulation of rates and services and also technical regulation to meet safety requirements and for other purposes. Examples of promotion are the building of canals from the time of Confederation to the present-day Seaway, the underwriting of railway development and branch-line extension, the establishment of Air Canada, the large investments made in airports and aeronautical installations, and the building of the Trans-Canada Highway.

The Department of Transport and the various Crown agencies reporting to Parliament through the Minister of Transport have jurisdiction over canals, harbours, shipping, civil aviation and interprovincial and international railways. Interprovincial or international pipelines for carrying gas, crude oil or petroleum products are under the jurisdiction of the National Energy Board. Jurisdiction over for-hire interprovincial or international highway transport also rests with the Federal Government but these powers are at present exercised by the provincial highway transport boards under the federal Motor Vehicle Transport Act of 1954.

Railway regulation was developed in a period when railways enjoyed a virtual monopoly of transport in the country. Measures to protect the public against excessive charges, unjust discrimination and other objectionable monopoly practices, together with measures to ensure safe operations, have over the years subjected railways to the most comprehensive regulation of any Canadian industry. In the intervening years the rapid growth of road, air and pipeline services has ended the railway monopoly for a large part of the total traffic available and has placed the railways in a highly competitive situation.

A Royal Commission was appointed in 1959 to inquire into the railway rate structure and other problems. Its findings indicated a need to shift from regulating monopoly to maintaining a balance between the several competing modes of transport. Legislation based on the findings of the Royal Commission was passed by Parliament and received Royal Assent on Feb. 9, 1967. The statute, called the National Transportation Act, defines a national transportation policy for Canada looking to the achievement of an economic and efficient transportation system making the best use of all available modes of transportation at the lowest total cost. It establishes a new body, the Canadian Transport Commission, to carry out the functions formerly performed by the Board of Transport Commissioners for Canada, the Air Transport Board and the Canadian Maritime Commission. In addition, the Act creates a framework within which the pipeline carriage of commodities other than oil and gas and the interprovincial and international motor transport undertakings could be regulated by the Canadian Transport Commission.

The general purpose of the Act is to create a situation in which the development of the transportation industry and the protection of the public against excessive or discriminatory charges are accomplished in the main by competition between modes rather than by regulation and control. The railways are relieved of some of the more onerous and outdated restrictions on their freedom to meet competition. On the other hand, a shipper who has no practical alternative to rail shipment can apply to have a maximum rate fixed for his goods by the new Commission. The Act also provides a procedure to allow the railways, under safeguards for the public interest, to abandon lines and withdraw passenger services where they are no longer needed.

The Canadian Transport Commission.—The Commission, created by the National Transportation Act (SC 1967, c. 69), was organized on Sept. 19, 1967 and succeeded to all the powers and duties of its predecessors, the Board of Transport Commissioners for Canada, the Air Transport Board and the Canadian Maritime Commission. The Commission is a court of record. It consists of a maximum of 17 members, of whom one is president and two are vice-presidents. One of the vice-presidents is charged with the superintendence of the work of the committees of the Commission and the other is charged with the superintendence of the programs of study and research of the Commission. For the purpose of performing its duties the Commission must establish committees, any of which may, in accordance with the rules and regulations of the Commission, exercise the powers of the Commission. Three of these committees—the Railway Transport Committee, the Air Transport Committee and the Water Transport Committee—are a

present functioning in respect of these several modes of transport. The finding or determination of the Commission upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of Canada upon a question of law or a question of jurisdiction with leave of a judge of that Court, or by the Governor in Council. However, a party to an application for a licence under the Aeronautics Act or the Transport Act may appeal to the Minister of Transport from a final decision of the Commission.

The Commission has jurisdiction under more than a score of Acts of Parliament, including the Railway Act, the Aeronautics Act and the Transport Act, over transportation by railway, by air and by inland water, and over communication by telephone and telegraph.

Railway Transport.—Under the Railway Act the jurisdiction of the Commission is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation and uniformity of railway accounting. The Commission also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada and over tolls for the use of international bridges and tunnels.

Except for certain statutory rates, and subject to certain powers of the Commission to deal with rates that it finds to be contrary to public interest, the railways are free to charge rates as they wish. However, rates must be compensatory, and the Commission may prescribe tolls for captive shippers if such tolls take undue advantage of a monopoly situation favouring the railways (see also p. 792).

Air Transport.—The Commission is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Commission issues regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, accounts, records and reports, traffic tolls and tariffs, and various other matters. All regulations, rules and orders issued by the former Air Transport Board continue in force until repealed or amended by the Canadian Transport Commission.

On Oct. 20, 1966, the Minister of Transport tabled in the House of Commons a "Statement of Principles for Regional Air Carriers", which assigns to the Commission the responsibility for initiating measures to implement the policy set out therein. In this connection, the Commission has under review the route structures of regional air carriers.

The Commission takes an active part in the work of the International Civil Aviation Organization and, when appropriate, undertakes bilateral negotiations for the exchange of traffic rights. At present, Air Canada and Canadian Pacific Airlines Limited are Canada's designated international scheduled carriers.

Water Transport.—Under the Transport Act, the Commission entertains applications or licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and on the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence, the Commission must be satisfied that public convenience and necessity require such transport. The Commission also has regulative powers over tolls for such transport.

In addition, the Commission administers subsidies paid by the Federal Government for the maintenance of certain coastal and inland water shipping services; the services and the amounts paid for the years ended Mar. 31, 1966 and 1967 are given on p. 842.

The National Energy Board.—The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The functions and operations of the Board are covered in the Domestic Trade and Prices Chapter of this volume, Part II, Section 4.

PART II.—RAIL TRANSPORT*

Since Confederation the railways of Canada have been the principal transport facility throughout, and beyond, the nation. The two great transcontinental systems, supplemented by a major north-south line on the West Coast and a few regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes.

The two nation-wide railway companies control a wide variety of Canadian and international transport and communications services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. It is the only railway serving all ten provinces and has completed a branch line to serve the Great Slave Lake area of the Northwest Territories. In addition, it operates a highway service, a fleet of coastal steamships, an extensive express service, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European and Caribbean points. The Canadian National, jointly with the Canadian Pacific Railway Company, operates a national telecommunications system that employs modern microwave, high-speed teletype and private wire networks, telex, data and weather facsimile transmission and movement of telegrams to any point in the world. The Canadian Pacific Railway Company is a joint-stock corporation also operating a transcontinental railway, an express service, a domestic truck and bus network, a fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels, a domestic airline service to points in British Columbia, Alberta and Yukon Territory, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Holland, the Azores, Portugal, Spain and Italy, a transcontinental service between Vancouver—San Francisco and Montreal and a non-stop service between Toronto and Honolulu.

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over an 800-mile route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with several northern branch lines recently completed or under construction. Interline barge and rail connections at Vancouver provide a complete service to any railway point on the Continent. The completion in 1958 of the northern section of this line opened up to development the vast interior of the province, providing access to its rich natural resources and stimulating large-scale investment in new industrial plants throughout the area it serves. The PGE is fully dieselized and controlled by an intricate microwave system from its Vancouver offices.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the

* The statistical data in this Part were revised in the Transportation and Public Utilities Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division. A special article on operational and technological changes in rail transport appears in the 1965 Year Book at pp. 755-761.

early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues came later and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure through funds raised by the issue of new bonds with Federal Government guarantee. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1966 amounted to \$1,325,461,500.

As discussed on pp. 792-793, the National Transportation Act (SC 1967, c. 69), administered by the Canadian Transport Commission, expresses a national transportation policy for Canada aimed at the development of "an economic, efficient and adequate transportation system making the best use of all available modes of transportation at the lowest total cost". The new law is expected to provide the railways with greater freedom to meet the competition with which they are faced and to develop as an integral part of today's complex transportation system.

Under the Act, the 1966 level of Federal Government rail subsidy of \$110,000,000 a year will decline by \$14,000,000 a year until it disappears at the end of 1974. The Crows Nest Pass rail rates on grain and flour from Western Canada and the rates under the Maritime Freight Rates Act remain in force. The so-called "bridge subsidy" paid under the Railway Act to the major railways for operation of lines through the light-traffic territory in the Lake Superior District ceased at the end of 1966 but the reduction in freight rates made possible by the bridge subsidy remains in force. After a period of one year of the coming into force of Part V of the National Transportation Act and upon authorization of the Canadian Transport Commission, the railways will be permitted to make successive annual increases for a period of three years to the freight rates over the territory formerly covered by the bridge subsidy, to yield additional operating revenues after one year of \$3,000,000, after two years of \$2,000,000 and after three years of \$2,000,000.

Section 1.—Railway Operating Statistics

Track Mileage.*—Construction was begun in 1835 on the first railway in Canada—the short link of 14.5 miles between Laprairie and St. Johns, Que.—but only 66 miles were in operation by 1850. The first great period of construction was in the 1850s when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870s and 1880s. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

There has been little change in total track mileage since the 1920s. The mileage peak was reached in 1959 and there has since been a gradual decline, new construction being more than offset by abandonment of unprofitable lines. In recent years, the development of a number of large projects in districts far removed from transport facilities and the opening up of the Northwest Territories have necessitated the building of branch lines. Those completed up to 1956 are listed in the 1957-58 Year Book, p. 815, and those completed from that year to 1966 are mentioned in subsequent editions. During 1967, 130 miles of the 235-mile track to give access to Alberta's northern resources were completed and grading was in process on the remainder of the line which will be operated by CN under a lease arrangement with the Government of Alberta. In northwestern Ontario, a 67-mile

* Statistics for individual railways are given in DBS annual report *Railway Transport, Part III* (Catalogue No. 52-209).

branch line stretching from Amesdale to Bruce Lake in the District of Kenora was nearing completion, for operation early in 1968. Also near completion were the 12-mile line from the vicinity of Stall Lake to the vicinity of Osborne Lake in The Pas district of Manitoba, and the 17-mile line from the vicinity of Watrous to the vicinity of Guernsey in the Regina Mining District of Saskatchewan, both scheduled for operation in March 1968. In addition, the CN constructed 100 miles of private sidings and industrial spurs to serve new manufacturing, warehousing and distributing facilities distributed along its lines.

In British Columbia, in November 1967 the first PGE train arrived at Fort St. John over the 108-mile extension from Prince George. This extension will continue for 80 miles northwest to Takla Landing. In addition, survey work was completed for the proposed 40-mile extension from Fort St. John to Beaton River on the 200-mile route to Fort Nelson.

1.—Railway Track Mileage Operated, 1900-66

NOTE.—Figures of total mileage of first main track operated for 1835-1959 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

¹ Defined as a single track extending the entire distance between terminals, upon which the length of the road is based. ² Newfoundland included from 1950. ³ Excludes joint track amounting to 61 miles in 1963, 58 miles in 1964, 55 miles in 1965 and 74 miles in 1966.

Rolling-Stock.—Table 2 shows the numbers of the various types of freight and passenger equipment in operation in 1959 and in 1966, revealing a generally downward trend over the period; however, these figures do not reflect the offsetting trend toward larger, more efficient cars and locomotives or the steady improvement in speed of movement facilitated by modernized handling and terminal services. Each year hundreds of units, particularly freight cars, are converted and modified to make them suitable for specific types of traffic or are replaced by special-purpose equipment designed for distinctive hauling jobs. The average capacity of all freight cars was 54.9 tons in 1966 compared with 51.1 tons in 1959. Also, although the number of diesel-electric locomotives in service has remained fairly static over this period, it should be noted that an extensive program of power up-grading has been followed by the railway companies. The combined tractive effort (the force exerted by powered equipment measured at the rim of the driving wheels) of all locomotives in 1966 averaged 58,927 lb. as compared with 53,368 lb. in 1959.

¹ Includes express, baggage, mail and other cars. ² Duplications included. ³ Includes cabooses miles but excludes miles made in passenger and non-revenue trains. ⁴ Excludes traffic handled by more than one railway; see Table 4 for details of freight carried.

The tonnage of revenue freight carried (including national loadings and receipts from United States connections) continues to increase year by year, the total in 1966 being 4.4 p.c. higher than in 1965. Of the main commodity groups, agricultural products, forest products and manufactures and miscellaneous products increased over the previous year, the largest contributors being wheat, pulpwood and fertilizers. Of the 205,500,000 tons carried in 1966 (excluding freight handled by more than one railway and in interme-

diate switching), mine products accounted for 40.0 p.c., manufactures and miscellaneous products for 32.0 p.c., agricultural products 17.1 p.c., forest products 9.7 p.c., animal products 0.7 p.c., and less-than-carload-lots for 0.5 p.c.; in 1965 the proportions were 41.9 p.c., 31.9 p.c., 15.4 p.c., 9.4 p.c., 0.8 p.c. and 0.6 p.c., respectively.

4.—Commodities Hauled as Freight by Railways, 1962-66

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

Railway Accidents.—Accidents shown in Table 5 include all those in which railway trains were involved and accidents on railway property; all passengers injured are included but, for employees, only those who were kept from work for at least three days during the 10 days following the accident are recorded. The classification of accidents used in reporting other DBS statistics treats collisions between motor vehicles and trains as motor vehicle accidents. Therefore, care should be exercised when compiling total accidental deaths of all kinds or when comparing results of accidents of different kinds, such as train and motor vehicle.

Finances.—Tables 6 to 9 give information on capital liability and capital investment in road and equipment, operating revenues and expenses and employees and their earnings for all railways.* Financial statistics of government-owned railways are given separately and in detail in Subsection 2. A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific Railways on Jan. 1, 1956, and for all other common carrier railways on Jan. 1, 1957. In transportation statistics, a distinction is made between expenditures and expenses. In the following data, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operation incident hereto, including maintenance and depreciation of the plant used in such service.

* Statistics for individual railways are given in DBS annual report *Railway Transport*, published in six Parts Catalogue Nos. 52-207—52-212; details on capital liability are given in Part II (Catalogue No. 52-208).

6.—Capital Liability of Railways, 1957-66

NOTE.—Figures from 1876 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.
(Exclusive of Canadian railway capital owned by Canadian railways)

Revenues and Expenses.—Railway operating revenues and expenses continue to rise, both reaching peak levels in 1966; increases over 1965 amounted to 7.9 p.c. and 6.4 p.c. respectively, and, because the increase in expenses was lower than that in revenues, earnings increased.

Of the total operating expenses in 1966 amounting to \$1,374,900,000, those connected with the transporting of persons and property, such as station, yard and terminal service and employees, wharves, fuel, etc., accounted for 38.0 p.c.; equipment maintenance 21.5 p.c.; road maintenance for 18.9 p.c.; rents and taxes for 8.0 p.c.; expenses connected with traffic soliciting, such as advertising and information, ticket and freight offices, etc., for 2.8 p.c.; and miscellaneous expenses, including incidentals, dining and buffet service, grain elevators, etc., for the remaining 10.7 p.c. These proportions have remained fairly constant in recent years.

8.—Operating Revenues and Expenses of Railways, 1957-66

NOTE.—Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition.

Year	Total Operating Revenues	Total Operating Expenses	Ratio of Operating Expenses to Operating Revenues	Per Mile of Line			Freight-Train Revenue per Freight-Train Mile	Passenger-Train Revenue per Passenger-Train Mile

Employment, Salaries and Wages.—Rail employment in 1966 was down slightly from the preceding year. Over the ten-year period 1957-66, employment dropped 28.7 p.c. but the average annual salary for the industry was 53.7 p.c. higher and total compensation paid was up 9.7 p.c. It should be noted that since 1964 employee data has been based on a new Uniform Canadian Classification of Railway Employees in which a bi-monthly method of counting was introduced; this method tends to reduce the number of employees by from 2 p.c. to 4 p.c. Details are given in DBS publication *Railway Transport, Part VI* (Catalogue No. 52-212).

9.—Railway Employees and Their Earnings, 1957-66

NOTE.—Figures include employees and wages for 'outside' operations amounting to from 3 p.c. to 6 p.c. of total employees and from 2 p.c. to 5 p.c. of total salaries and wages. Figures from 1912 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

¹ Includes employees engaged in communications, express cartage, highway transport (rail) and outside operations.

² See text above.

Express Services.—There are five express organizations operating in Canada, one of which exists as a subsidiary of the Canadian Pacific Railway Company and the business of the other four is handled by departments of the railways with which they are connected.

The companies are organized under federal legislative authority and are engaged primarily in the rapid transportation of package freight but their services also include custom brokerage, money orders, travellers cheques and other financial paper transactions. Recently, the major railways have introduced a unified service for handling small package express freight and less-than-carload-lot shipments, using the efficient facilities of their rail, piggyback and highway transport services to provide fast and competitive movement of goods. The eventual effects of this changing concept of express service will not be evident statistically until the integration processes are fully completed.

No statistics are available on the volume of express freight handled because much of it consists of parcels and small lots that cannot be classified. Table 10 shows the mileages operated by and the financial statistics of the express agencies for 1962-66 with figures by company for 1966.

10.—Summary Statistics of Express Companies, 1962-66

¹ Over railways, boat lines, motor carrier and aircraft routes.

² Includes tax accruals.

³ Amounts

paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting express matter.

⁴ Excludes airline mileages of the Railway Express Agency.

Business transacted by express companies in financial paper is showing a downward trend, declining from \$137,434,334 in 1962 to \$122,411,975 in 1966. The latter was made up of: domestic and foreign money orders, \$95,849,108; C.O.D. cheques, \$15,405,453; travellers cheques, \$11,084,000; and telegraphic transfers, \$73,414. The major decrease was shown in the amount of money orders issued.

Section 2.—The Canadian National Railway System

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Section. More detailed information than can be given here is obtainable from DBS annual report *Canadian National Railway*: (Catalogue No. 52-201).

Financial Statistics.—The original financial structure of the CNR and the step taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the 1955 Year Book, pp. 840-847. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which

after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also, for a term of ten years ended Jan. 1, 1962, the Railway was not obliged to pay interest on \$100,000,000 of its long-term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced. By the end of 1966, the proportion represented by equity capital in shareholders' account was 51.3 p.c.

The financial details presented in Table 13 are those of the entire Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications and highway transport (rail) operations. In conformity with the requirements of the Uniform Classification of Accounts adopted Jan. 1, 1956, tax accruals and rents are charged to operating expenses.

13.—Total Revenue, Operating Expenses, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System (Canadian and United States Operations), 1957-66

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

PART III.—ROAD TRANSPORT*

Highways and motor vehicles are herein treated as related features of transportation. An introductory Section summarizes provincial regulations regarding motor vehicles and motor traffic.

Section 1.—Provincial Motor Vehicle and Traffic Regulations†

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at pp. 808-809.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized as follows.

Operators' Licences.—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests. Such licence is renewable annually in Newfoundland, Saskatchewan, Yukon Territory and the Northwest Territories; in Alberta and British Columbia it is renewable every five years; in Prince Edward Island, New Brunswick, Quebec and Manitoba it is renewable every two years and, in Quebec, expires on the licensee's birth date; in Ontario a licence is issued on a three-year basis and expires on the licensee's birth date and in Nova Scotia a licence is issued on a three-year basis and expires at the end of the licensee's birth month. Special licences are required for chauffeurs in all provinces except Newfoundland. In Alberta a person under 16 but not under 14 years of age may be issued a licence to operate a scooter, which is defined as a motor vehicle with a speed limit not exceeding 30 miles an hour. In Saskatchewan, special tests are required for the operation of a motorcycle and the operator's licence is so endorsed.

Motor Vehicle Regulations.—All motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the rear of the vehicle (one only for the rear of trailers); in New Brunswick one licence plate is issued to be attached to the front of truck tractors and to the rear of all other vehicles; in Prince Edward Island, Quebec, Manitoba, Saskatchewan and Alberta one plate is issued for motorcycles, to be mounted on the rear. In most provinces, in event of sale the registration plates stay with the vehicle but in Quebec, Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova

* Except as otherwise indicated, the material in this Part has been revised in the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

† Revised according to information received from the respective provincial authorities concerned.

Scotia, vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exemption from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is three months, in British Columbia where it is six months, in Ontario where it is six months for vehicles from other provinces and three months for vehicles registered outside Canada, in Manitoba where residents may use registration plates from other jurisdictions for 90 days and visitors are exempt from registration provided the vehicle is not used for business purposes, and in Alberta where non-residents may operate vehicles currently registered in their home province or state of the United States on a temporary basis not exceeding three months) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Prince Edward Island, New Brunswick, Quebec and Yukon Territory (unless otherwise posted) is 60 miles an hour in daytime and 55 at night; in Manitoba, it is 60 or 65, as posted, in daytime and 50 or 60 at night; in Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highway where higher speeds may be posted. In Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour except where 65 miles an hour is authorized. In Ontario maximum speeds vary from 50 to 60 miles an hour, depending on type of highway. In the other provinces the maximum speed permitted is normally 50 miles an hour; in Saskatchewan and British Columbia where higher speed limits are in effect they are posted. Slower speeds are required in cities, towns and villages (in Nova Scotia and British Columbia when passing schools and public playgrounds), at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In most provinces, truck speed limits are at least five miles an hour below automobile speed limits although in Manitoba they are the same as for passenger vehicles. In all provinces and territories, accidents resulting in personal injury or property damage of \$100 or more must be reported to a police officer (in Nova Scotia to the Registrar of Motor Vehicles or to a police officer; in Quebec to a police officer or to the Motor Vehicle Bureau) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Driver Licensing Controls.—All provinces and territories impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of the car (except in the Northwest Territories), or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

Safety Responsibility Legislation.—Each province has enacted safety responsibility legislation (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle registration of a person convicted of a serious offence (impaired driving, driving under suspension, dangerous driving, etc.). It also provides for the automatic suspension of a person's driving licence and registration of the owner whose uninsured vehicle is involved directly or indirectly in an accident resulting in damage in excess of \$100 or injury or death to any person. In Saskatchewan a Judgment must be rendered for damages and, where such Judgment is rendered against the driver or owner, the driver's licence and registration

remain suspended until the Judgment is satisfied and proof of financial responsibility for the future is filed. In British Columbia proof of financial responsibility for the future is not required if suspension is for accident only. In Saskatchewan and the Yukon Territory, uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of \$100 (\$200 in Saskatchewan). In the Province of Quebec, pursuant to the Code of Civil Procedure, the plaintiff may seize before Judgment the motor vehicle which has caused him damage whatever the amount of property damage whether covered for third-party insurance or not. In Ontario, the non-resident motorist is not required to carry or produce any form of proof of insurance. In Manitoba, proof of insurance must be supplied at the time of registration but if such insurance expires or is cancelled registration of the vehicle is not suspended.

Although safety responsibility legislation has not been enacted in the Northwest Territories, under present requirements the owner of a motor vehicle resident in the Mackenzie Highway region must submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration. In the Yukon Territory, proof of insurance must be supplied before vehicle licence is issued, and when the insurance expires or is cancelled vehicle licence plates must be returned to the Registrar of Motor Vehicles.

Unsatisfied Judgment Fund.—Legislation has been enacted in all provinces except Saskatchewan, and in the Yukon and Northwest Territories, usually in the form of an amendment to the motor vehicle laws of the province or territory, providing for the establishment of a fund, frequently called an Unsatisfied Judgment Fund (in Ontario, the Motor Vehicle Accident Claims Act; in Alberta, the Motor Vehicle Accident Claims Fund and in British Columbia, the Traffic Victims' Indemnity Fund), out of which are paid Judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. In Newfoundland, Prince Edward Island, Nova Scotia, Quebec and British Columbia the fund is maintained by insurance companies. In all the other provinces, except Saskatchewan where insurance is compulsory, the funds are obtained by the annual collection of a fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued. The fee usually does not exceed \$1 per annum; in Ontario a fee of \$25 is paid by the uninsured motorist (in the absence of the fee being paid the uninsured, if apprehended, is liable to a fine) and, in addition, the fund is subsidized by a \$1 annual charge from each licensed driver; in Alberta \$20 is collected from each uninsured owner of a motor vehicle at the time of registration or transfer; and Manitoba collects an additional \$25 from each uninsured owner at the time of registration.

A feature of this legislation, which is contained in some provincial statutes, is the provision for the payment of Judgments in hit-and-run accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles (the Minister of Finance in Newfoundland and the Administrator of the Motor Vehicle Accident Claim Fund in Alberta); any Judgment secured against the responsible authority is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one Judgment. In Newfoundland and Nova Scotia, the limits are \$10,000 for one person, \$20,000 for two or more persons injured in one accident and \$5,000 for property damage. In Nova Scotia and New Brunswick, the limit is \$35,000 in respect of any one accident. In Prince Edward Island and Quebec, the limit is \$35,000 for all damages in the same accident, subject to a deduction of \$200 from all damage to the property of others; damages resulting in bodily injury or death are, up to \$30,000, payable by priority over damages to property and the latter are, up to \$5,000, payable by priority over the former out of the amount of any insurance or other guarantee of indemnity. In British Columbia, the limit is based on the single amount of \$50,000 for any one accident with the provision that not more than \$5,000 may be paid on a property damage claim until injury claims up to \$45,000 have been satisfied; the \$35,000 limit exists for hit-and-run accidents but does not apply to

payments for property damage. In Alberta, the limit is \$35,000 for death or personal injury to one or more persons and \$5,000 for damage to property, subject to a limit of \$35,000 in any one accident; where in one accident claims result from bodily injury to or death of one or more persons and loss of or damage to property, claims arising out of bodily injury or death have priority over claims arising out of loss of or damage to property to the amount of \$30,000, and claims arising out of loss of or damage to property have priority over claims arising out of bodily injury or death to the amount of \$5,000, subject to a deduction of \$50. In Manitoba, the limit based on one accident is \$35,000, with Judgments arising out of bodily injury or death having priority to the extent of \$30,000 over claims resulting from loss of or damages to property; and Judgments arising out of loss of or damage to property having priority to the extent of \$5,000 over Judgments resulting from bodily injury or death; the maximum amount payable for a single Judgment resulting from loss of or damage to property is \$3,000, subject to a deduction of \$200.

In Ontario, the Motor Vehicle Accident Claims Act passed in 1962 replaced the Unsatisfied Judgment Fund which had been in effect since 1947. The new Act was streamlined to adjust promptly and efficiently all those claims incurred by the uninsured motorist. Claims could be adjusted much the same as by the insurance companies. The limits under the Act are \$35,000, inclusive of \$5,000 for any property damage claim. Many small claims are handled by the Ontario Department of Transport, subject to a \$50 franchise clause in respect to property damage, but the procedure is such that claims can be settled under Sect. 5 of the Act without resort to litigation. Sect. 6 covers Judgment cases and Sects. 11 and 14 cover the hit-and-run cases in which a Judgment is necessary and property damage is not payable.

Sources of information on provincial motor vehicle and traffic regulations:—

Newfoundland

Administration.—The Minister of Finance, St. John's.

Legislation.—The Highway Traffic Act, 1962 (amended 1964).

Prince Edward Island

Administration.—The Provincial Secretary, Charlottetown.

Legislation.—The Highway Traffic Act (SPEI 1964, c. 14).

Nova Scotia

Administration.—Registry of Motor Vehicles, Department of Highways, Halifax.

Legislation.—The Motor Vehicle Act (1954, c. 184, as amended) and the Motor Carrier Act (1958, c. 7, as amended).

New Brunswick

Administration.—Motor Vehicle Branch, Department of Provincial Secretary, Fredericton.

Legislation.—The Motor Vehicle Act (RSNB 1955, as amended).

Quebec

Administration.—Motor Vehicle Bureau, Department of Transportation and Communications, Parliament Bldgs., Quebec.

Legislation.—The Highway Code (RSQ 1964, c. 231, as amended) and the Highway Victims Indemnity Act (RSQ 1964, c. 232).

Ontario

Administration.—Ontario Department of Transport, Toronto.

Legislation.—The Highway Traffic Act (RSO 1960, c. 172, as amended), the Public Vehicles Act (RSO 1960, c. 337, as amended), the Public Commercial Vehicles Act (RSO 1960, c. 319, as amended), and the Motor Vehicle Accident Claims Act (1961-62, c. 84, as amended).

Manitoba

Administration.—Minister of Public Utilities, Winnipeg.

Legislation.—The Highway Traffic Act (SM 1966, c. 29) and The Unsatisfied Judgment Fund Act (SM 1965, c. 89).

Saskatchewan

Administration.—Highway Traffic Board, Revenue Building, Regina.

Legislation.—The Vehicles Act, 1965.

Alberta

Administration and Legislation.—The Motor Vehicle Accident Claims Act (SA 1964, c. 56) and the Highway Traffic Act (SA 1967, c. 30) are administered by the Motor Vehicle Branch, Department of Highways, Edmonton. The Public Service Vehicles Act (RSA 1955, c. 265) and the Rules and Regulations are administered by virtue of authority vested in the Highway Traffic Board, Department of Highways, Edmonton.

British Columbia

Administration and Legislation.—Enforcement of the Motor Vehicle Act, the Commercial Transport Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Motor Carrier Act is administered by the Public Utilities Commission, the Motor Vehicle Act by the Superintendent of Motor Vehicles and the Commercial Transport Act by the Minister of Commercial Transport, Victoria, B.C.

Yukon Territory

Administration.—Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Registrar of Motor Vehicles, Government of the Yukon Territory, Whitehorse, Y.T.

Legislation.—The Motor Vehicles Ordinance (Revised Ordinances 1958, c. 77, as amended).

Northwest Territories

Administration.—Commissioner of the Northwest Territories, Yellowknife, N.W.T.

Legislation.—The Motor Vehicle Ordinance (Revised Ordinances of the Northwest Territories, 1956, c. 72, as amended).

Section 2.—Highways, Roads and Streets

Highways and Roads.—The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1966 the reported mileage of highways and rural roads was 444,742 miles, a figure that includes all roads under provincial jurisdiction, federal roads (except for all but flexible pavement roads in Indian reservations), and local roads under municipal jurisdiction other than the roads and streets in census metropolitan areas and urban centres of more than 1,000 population. Mileage for the latter is given separately under the heading of "Urban Streets".

¹ Includes federal administrative costs re Trans-Canada Highway amounting to \$190,000 in 1965-66 and \$170,000 in 1966-67.

Federal-Provincial Road Assistance Programs.—There are various programs existing between the Federal Government and the provinces relating to highway and road construction, the co-ordination of which is the responsibility of the federal Minister of Transport who reports to Parliament on federal road policy. When major programs of assistance have been decided upon, their implementation is undertaken either by the Department of Public Works or by the sponsoring Department.

The Trans-Canada Highway.—The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with data on specifications and route across the participating provinces, in the 1951 Year Book, pp. 631-634. Construction progress and changes in legislation are reported in subsequent editions.

Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces. Construction standards were set and the date of completion fixed. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces, and those sections within the National Parks were to be the responsibility of the Federal Government. Later amendments to the Act increased the extent of federal financial participation and extended the period in which construction costs might be incurred under the Act to Dec. 31, 1970.

Although construction was still going on in a number of sections, the closing in 1962 of the last major gap—in the Rocky Mountains—made it possible for the first time to drive the entire length of the 4,860-mile route. The Trans-Canada Highway was officially opened on Sept. 3, 1962. Provincial mileages are approximately as follows: Newfoundland

540; Prince Edward Island, 71; Nova Scotia, 318; New Brunswick, 390; Quebec, 399; Ontario, 1,453; Manitoba, 309; Saskatchewan, 406; Alberta, 282; and British Columbia, 552. Length through the National Parks totals 140 miles.

Up to Mar. 31, 1967, contractual commitments for new construction on the Highway amounted to \$1,107,628,114, of which the federal share was \$743,588,371. Federal payments to the provinces for prior, interim and new construction totalled \$654,264,654. Paving to specified standards had been completed over a distance of 4,260 miles and 841 bridges, overpasses and other structures of more than 20-foot span had been or were being constructed.

Northern Roads.—In the past decade it has become increasingly apparent that if Canada is to benefit from supplying a large part of the world's increasing demands for minerals, a well-planned road network in the Yukon and Northwest Territories is imperative. In 1965, after thorough planning and detailed research, the Federal Government announced the Northern Road Network Program, calling for the construction of roads in the Territories to cost \$10,000,000 a year for a ten-year period. This period, in turn, is part of a 20-year plan intended to bring all resource-potential areas covered by the Program within 200 miles of the nearest permanent road. This will gradually reduce the dependence of the North on seasonal transportation for bulk shipments, reduce the cost of holding large inventories and, as the program progresses, bring the cost of living in communities more in line with that in other parts of Canada and also stimulate the growth of the tourist industry.

Types of roads and the proportion of federal assistance under the Program are as follows:—

Communication and Network Roads—highways, major roads and secondary and local roads to provide a primary network in the Territories, including trunk highways, secondary trunk roads and airport roads; construction and 85 p.c. of maintenance costs will be paid by the Federal Government.

Tote Trails—low standard roads to provide temporary, seasonal or year-round access to the property of a company exploring or developing a natural resource; up to 50 p.c. or \$20,000 of the cost may be contributed by the Territory concerned.

Initial Access Roads—low standard roads to provide the same service as Tote Trails but where the contribution under the Tote Trail category would be insufficient; federal assistance may be up to 50 p.c. of the cost or 5 p.c. of expenditures on the exploration or development project.

Permanent Access Roads—from the nearest permanent road to the location of a resource development that has been brought to the preproduction stage; federal assistance may be up to but not exceeding (a) 66⅔ p.c. of the total cost, (b) 15 p.c. of the capital invested by the company before start of production, or (c) \$40,000 per mile.

Resource Development Roads—leading from the nearest permanent area in which two or more resource projects have reached the production stage; all construction costs are to be paid by the Federal Government but expenditures will not be undertaken unless it is proven that the projects to which the road leads can be operated commercially for many years.

Area Development Roads—low standard roads into or through an undeveloped region of favourable natural resource potential; construction is the responsibility of the Federal Government.

Roads to Public Airports (land or water)—to connect airports with the nearest road network or local road; construction and 85 p.c. of maintenance will be paid by the Federal Government.

In the Yukon Territory under this Program, approximately 1,360 miles of road constructed at a cost of about \$34,000,000 were in use in 1966-67; in the Northwest Territories and Wood Buffalo National Park, about 1,050 miles at a cost of about \$34,000,000 were in use by March 1967. Work done on the extension of the Mackenzie Highway to Fort Simpson in 1967 amounted to approximately 20 miles; an additional 60-mile, two-year contract will be let in 1968, and eventually this road may be extended down the Mackenzie Valley, possibly to the Arctic Coast. A smaller road system exists in the Fort Smith area, including the Fitzgerald-Bellrock portage road and the park administrative roads in Wood Buffalo National Park. Total length of this road system is about 274 miles.

In Yukon Territory, a 142-mile area development road from Ross River to Carmacks is expected to be completed in late 1968. In addition to opening up a potentially rich resource area, this road is of special interest to tourists since it will provide a route from Watson Lake on the Alaska Highway to and through Carmacks, Dawson, and onward to the Alaska border where it will connect with the State of Alaska Highway System. In addition, the Federal Government has agreed to improve existing routes or build new ones to tidewater at either Haines or Skagway in the Alaska Panhandle, a distance of almost 400 miles, to facilitate shipment of lead-zinc concentrates to Japan. Surveying is under way in preparation for the extension of the Dempster Highway in Yukon Territory, now in use for 78 miles, to Fort McPherson in the Northwest Territories.

Roads to Resources.—In 1958, a federal-provincial cost-sharing program was undertaken, designed to provide access roads to areas potentially rich in natural resources or to areas with tourist potential. The share of the Federal Government was 50 p.c. of the total cost of each province's projects up to a maximum of \$7,500,000. Agreements were signed by all provinces, resulting in the construction of close to 5,000 miles of road, and the program has been completed.

Construction and Improvement of Trunk Highways in the Atlantic Provinces.—This program, announced in February 1965, involves an expenditure by the Federal Government of \$30,000,000 over a three-year period to be financed from special appropriations to the Atlantic Development Board. The additional appropriations enable the Board to continue and expand a program of highway assistance begun in 1964 when \$10,000,000 was allocated from the Atlantic Development Fund to meet pressing trunk highway needs in the Atlantic region. Expenditures approved and funds disbursed by the Atlantic Development Board under this program up to Mar. 31, 1967, were \$19,347,741 and \$10,652,259, respectively. (See also Chapter XXIV, Sect. 6, Subsect. 2.)

Urban Streets.—Information on urban streets is obtained from the local administrations of all areas with populations of over 1,000, all areas located within census metropolitan areas, improvement districts with over 1,000 population and rural municipalities with over 15,000 population. Brief statistical data are given in Table 3; more detail may be obtained from DBS annual report *Road and Street Mileage and Expenditure* (Catalogue No. 53-201).

3.—Statistics of Urban Streets, 1965 and 1966

¹ Includes expenditures on sidewalks, footpaths, bridges and ferries.

Section 3.—Motor Vehicles

Motor Vehicle Registrations.—Registrations continue to increase year by year, a record of 7,035,261 being reached in 1966. Of that total, 5,499,527 were passenger cars—one for every 3.6 persons. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

4.—Motor Vehicles Registered, by Province, 1957-66

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures from 1964 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

³ Included with trucks.

Apparent Supply of Automobiles.—The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XXI on Domestic Trade and Prices.

Provincial Government Revenue from Motor Vehicles.—The taxation of motive fuels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government revenue. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1966 the average cost per motor vehicle for operating taxes and licences was about \$141.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Motive fuel tax rates are given in the Public Finance Chapter, Section 2, Subsection 2 on Provincial Taxes; Federal Government revenue from excise and sales taxes is given in the same Chapter, Section 3, Subsection 3 on Revenue from Taxation.

¹ Operators' licences are issued for different periods in different provinces; see p. 805 for provincial regulations.

² Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws.

³ Included with other motor vehicles.

⁴ Included with miscellaneous revenues and therefore in total.

⁵ Included with passenger automobiles.

⁶ Not complete.

Sales of Motive Fuels.—In order to estimate the total amount of motive fuel purchased in Canada for use in motor vehicles on public streets and highways, it has been necessary to eliminate from the total the amount of motive fuel used for other purposes. Thus, from the total or gross sales, including imports and exports, the following are subtracted to obtain net sales: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds were paid. Net sales are thus defined as sales on which a tax or taxes have been paid in full and are considered to approximate the actual amount of motive fuel purchased in Canada for use on public streets and highways. As shown in Table 8, consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 6.8 p.c. in 1966 and net sales of diesel oil 15.2 p.c.

Motor Transport Traffic.—Statistics of motor transport traffic, given for 1963 and 1964 in the 1967 Year Book, pp. 813-814, and in detail in DBS reports Catalogue Nos. 53-207—53-214, are not currently available for later years because of the eventual revision of the series.

Motor Carriers—Freight.*—Statistics of the common carrier segment of the intercity and rural motor carrier industry have been collected on a continuing basis since 1941. Statistics of contract carriers are available from 1958.

* Statistics are given in more detail in DBS annual report *Motor Carriers—Freight*, Part I (Catalogue No. 53-222) and Part II (Catalogue No. 53-223).

Passenger Buses.†—The operations of companies predominantly engaged in passenger bus service are summarized in Table 11. Data refer to the for-hire segment of the industry. Only firms engaged in intercity and rural operations and having an annual gross revenue of \$6,000 or over are covered. Operators predominantly involved in the provision of school bus service are not included nor are airport servicing and urban transit bus operators.

* Statistics are given in more detail in DBS annual report *Moving and Storage, Household Goods* (Catalogue No. 53-221).

† Statistics are given in more detail in DBS annual report *Passenger Bus Statistics* (Catalogue No. 53-215).

11.—Summary Statistics of Intercity and Rural Passenger Bus Companies, 1962-66

NOTE.—Only carriers with an annual gross revenue of \$6,000 or over are included.

Urban Transit Systems.—The collection of statistical information on urban transit systems has been extensively reorganized in recent years because of major changes made in the types of vehicles used for mass passenger movement in urban centres. The current series, which was started in 1956, includes operations of motor buses, trolley coaches, streetcars and subway cars carrying passengers in urban and suburban service.

² Included in other items.

³ Excludes British

There are two subway systems in operation in Canada; the Toronto subway was officially opened on Mar. 30, 1954 and the Montreal subway went into public use on Oct. 17, 1966.

Motor Vehicle Traffic Accidents.—There were 426,105 motor vehicle traffic accidents reported in 1966 compared with 398,127 in the previous year. Deaths from such accidents continue their upward trend, numbering 4,902 in 1965 and 5,281 in 1966 as against 3,184 in 1956. Statistics for 1966, reported by place of occurrence, are given by province in Table 13 but it should be noted that, although motorists are required by law to report accidents, complete statistics of these accidents are not available for all provinces. According to DBS vital statistics data, reported on a different basis, there were 5,320 deaths from motor vehicle traffic accidents in 1966.

PART IV.—WATER TRANSPORT*

The Canada Shipping Act.—Legislation regarding shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

Section 1.—Shipping Facilities and Traffic

Subsection 1.—Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that Canadian shipping must compete with foreign flag shipping.

Within the region from approximately Havre St. Pierre on the St. Lawrence River upstream to the head of the Great Lakes, the carriage of goods or passengers from one Canadian port to another Canadian port, commonly known as the coasting trade, is restricted to ships registered in Canada. Elsewhere in Canada, the coasting trade is open to all Commonwealth ships.

Canadian Registry.—Under Part I of the Canada Shipping Act, ships in excess of 15 tons net register and pleasure yachts in excess of 20 tons net are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp. or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate incorporated under the law of a country of the Commonwealth or of the Republic of Ireland and having their principal place of business in those countries. Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships are given the general designation 'British Ship', and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping at one of the 75 Ports of Registry in Canada.

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbour Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Water Transport Committee, Canadian Transport Commission; and canal traffic and statistics of shipping by the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

1.—Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1964-66

NOTE.—Figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1944 edition.

Shipping Traffic.—Table 2 shows the number and tonnage of all vessels (except those of less than 15 registered net tons, naval vessels and, for 1962-66, fishing vessels) entering Canadian customs and non-customs ports. Previous to 1957, only the international and coastwise movements of cargo in and out of customs ports were recorded.

The freight movement through a large port takes a number of different forms. These include cargoes for or from foreign countries and cargoes loaded and unloaded in coastwise shipping, i.e., domestic freight moving between Canadian points. There is, as well, the

in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Shipping statistics, which cover traffic in and out of both customs and non-customs ports, do not include freight in transit or freight moved from one point to another within the harbour. Table 4 shows the principal commodities loaded and unloaded in foreign and coastwise shipping at the 13 ports handling the largest cargo volumes in 1966. These ports handled 65.7 p.c. of all Canada's international shipping and 45.3 of the coastwise trade. The specific commodities shown are those transported in volume and often in bulk form.

4.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1966

NOTE.—Only commodities totalling over 50,000 tons are listed.

Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for handling of general cargo, and special equipment for bulk freight of all kinds. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, vessel repair docks.

Nine of the principal harbours of Canada are administered by the National Harbours Board and 11 other major harbours are administered by Harbour Commissioners, which include municipal as well as Federal Government appointees. In addition, there are some 300 public harbours under the direct supervision of the Department of Transport, administered under rules and regulations approved by the Governor General in Council. Harbour masters are appointed by the Minister of Transport for these harbours, their remuneration being paid from fees levied on vessels, under the terms of the Canada Shipping Act.

Throughout the country there are several thousand wharves and breakwaters administered by the Department of Transport under the Government Harbours and Piers Act. These facilities are for the accommodation of cargo ships and commercial fishing craft and are under the general supervision of the Department of Transport District Marine Agents. Wharfingers, whose remuneration is determined as a percentage of wharfage fees collected, are appointed for the direct supervision of these public wharves and floats. They are designed to accommodate the smallest fishing or pleasure craft or the largest ocean-going vessels, according to local requirements. At many ports, in addition to public harbour works operated by the administering authority, there are extensive dock and handling facilities owned by private companies including railway lumber, pulp and paper, coal, steel, iron ore, petroleum, grain, fish and other industries moving large volumes of bulk materials.

In 1966, the harbours of Canada handled more than 258,000,000 tons of cargo in 263,000 vessel arrivals and departures in international seaborne and coastwise shipping.

National Harbours Board.—The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of St. John's, Halifax, Saint John, Chicoutimi, Quebec, Trois-Rivières, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier and Champlain Bridge at Montreal. Facilities at the larger harbours are listed in Table 5, and summary traffic statistics for 1965 and 1966 in Table 6. Operating revenues and expenditures are given in Table 20, p. 841.

5.—Facilities of the Larger Harbours Administered by the National Harbours Board as at Dec. 31, 1966

NOTE.—The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

Subsection 3.—Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport, together with those under the jurisdiction of the St. Lawrence Seaway Authority, comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

Those included under the two classifications—Seaway canals and Department of Transport canals—are listed in Table 7 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrew's

Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1966, 110,702,534 tons of freight and 23,466 vessels passed through the canal as compared with 99,395,117 tons of freight and 23,356 vessels during 1965. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1966 carried 178,486 passengers as compared with 157,813 in 1965.

¹ Minimum depth of Seaway canals is 27 feet and minimum width 200 feet. Wiley-Dondero canal and two near Massena, N.Y., are in United States territory; dimensions are approximately the same as those of Canadian facilities. ² Notice must be given by vessels of more than six-foot draught. ³ With Lake Ontario elevation of 243 feet.

Cargo traffic through the Canadian lock and United States locks at Sault Ste. Marie during 1966 totalled 103,669,435 tons—the first year since 1957 that shipments were in excess of 100,000,000 tons; the record to date was established in 1953 when 128,489,170 tons were reported through the lock systems. Of this volume, by far the greater portion travels through the American side, where the three wider and longer locks accommodated all but approximately 1,250,000 cargo tons in 1966. In terms of tonnage, three commodities—iron ore, wheat and coal—dominate all others in lake traffic, and in 1966 made up over 90 p.c. of movements through the Sault Ste. Marie locks. Iron ore shipments alone, at 69,439,792 tons, comprised 67.0 p.c. of the total and wheat shipments amounted to 14,998,263 tons, indicative of important sales abroad. A relatively small volume of wheat moves directly to foreign lands aboard ocean-going vessels, most of it being carried by the laker fleet to elevators along the St. Lawrence River to await later shipment to receiving countries. Bituminous coal shipped through the Sault Ste. Marie locks during 1966 amounted to 8,078,117 tons, reflecting a continuing, impressive consumption of this commodity in the Great Lakes region.

Canadian Use of the Panama Canal.—The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of 5,642,000 long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1966 and passing through the Panama Canal, only 6,000 long tons were destined for Eastern Canadian ports. Similarly, of the 689,000 long tons of cargo leaving Eastern Canadian ports and passing through the Panama Canal, 13,000 long tons were destined for Western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 1,151,430 long tons in the year ended June 30, 1966; the total from any origin arriving at Eastern Canadian ports after having passed through the Panama Canal was 536,764 long tons.

Subsection 4.—The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year books. A special article carried in the 1956 edition (pp. 821-829) gives detailed information on Great Lakes-St. Lawrence waterway traffic immediately prior to the beginning of

construction on the project and another special article carried in the 1960 Year Book (pp. 851-860) covers the story of the Seaway, its new facilities and services and the movement of freight during the second year of its operation.

The St. Lawrence Seaway Authority, constituted as a Corporation by Act of Parliament in 1951 (RSC 1952, c. 242), undertook the construction (and subsequent maintenance and operation) of Canadian facilities between Montreal and Lake Erie to allow 27-foot navigation, concurrently with the construction of similar facilities in the International Rapids Section of the St. Lawrence River by the Saint Lawrence Seaway Development Corporation of the United States. The Seaway was opened to commercial traffic on Apr. 1, 1959 and officially opened on June 26, 1959. With the opening of the Seaway certain ancillary canals were transferred to the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes. These include the Lachine, a section of the Cornwall Canal, a portion of the third Welland Canal and the Canadian locks at Sault Ste. Marie. Tolls are not assessed against vessel movements on these waterways and traffic data for them are not included in this Subsection. Major construction undertaken in 1967 was on the channel to bypass the City of Welland, scheduled for completion by the navigation season of 1972.

Tables 13 and 14 give combined traffic statistics of the St. Lawrence and Welland Canals for the years 1966 and 1967. Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway. On this basis, 4,758 ships carrying about 29,326,000 tons of cargo moved upbound through the Seaway in 1967 and 4,845 vessels carrying 31,597,000 tons moved downbound. Ocean-going ships carried 22.2 p.c. of the total cargoes and lakers 77.8 p.c. Of the total tonnage carried upbound in 1967, 23,212,000 tons were domestic cargo and 6,114,000 tons were foreign traffic; downbound, 24,187,000 tons were domestic freight and 7,411,000 tons were carried to and from foreign ports.

13.—Summary Statistics of St. Lawrence Seaway Traffic, 1966 and 1967

Totals	66,940,437	100.0	60,923,456	100.0

On the Montreal-Lake Ontario Section, upbound traffic amounted to 26,700,000 tons in 1967 and downbound traffic to 17,300,000 tons for a total decrease of 10.6 p.c. over 1966. The former was accounted for almost entirely by the volume of iron ore shipped from St. Lawrence ports to Hamilton and Lake Erie, and the latter by overseas shipments of wheat. There were 220 fewer upbound transits and 200 fewer downbound transits in 1967 than in 1966, indicating a slight decrease in the number of vessels using this portion of the Seaway. Bulk cargo comprised 86.5 p.c. of the total traffic through the Section in 1967, the principal commodities through the St. Lawrence canals being iron ore, wheat, corn, fuel oil, barley and bituminous coal. Traffic patterns show that 30.0 p.c. of the total movement was between Canadian ports, 38.7 p.c. moved between Canadian and United States ports and 30.7 p.c. consisted of foreign trade to and from Canada and the United States. The small remainder was traffic between ports in the United States.

There were 7,437 transits through the Welland Canal in 1967, with a cargo volume of 22,400,000 tons upbound and 30,400,000 tons downbound; bulk cargo accounted for 90 p.c. of the traffic. Although many vessels pass through both the St. Lawrence and the Welland Canals on "through" trips, there is a substantial amount of local traffic between Great Lakes ports which involves only the Welland Canal. These movements are largely of iron ore, grain and coal. The Welland Canal traffic was 8,800,000 cargo tons greater than that reported for the Montreal-Lake Ontario Section.

Income of the St. Lawrence Seaway Authority for 1967 amounted to \$19,384,700 comprising toll revenue of \$17,282,152 assessed for transits through the Seaway located between Montreal and Lake Ontario and sundry revenues (rentals, wharfage, bridge revenue, etc.) of \$2,102,610. Total expenses for 1967 amounted to \$15,242,135, of which operation and maintenance expenses amounted to \$11,054,187 and regional headquarters administration and engineering expenses amounted to \$3,990,384, and construction \$197,564.

Pleasure craft locked through the Montreal-Lake Ontario Section canals numbered 12,434 upbound and 14,339 downbound in 1967, and those locked through the Welland Canal numbered 1,893 upbound and 2,478 downbound. This traffic to and from Montreal was exceptionally high compared with previous years because of the attraction of Expo 67.

Subsection 5.—Marine Services of the Federal Government

The Marine Services of the Department of Transport comprises five Branches—Marine Works, Marine Regulations, Marine Operations, Shipbuilding, and Marine Hydraulics—each headed by a director responsible to the Assistant Deputy Minister, Marine.

The *Marine Works Branch* responsibilities include provision and maintenance of aids to navigation, maintenance and management of Canada's secondary canals, administration of public harbours and wharves, and general supervision of harbour commissions. It has three Divisions—Aids to Navigation, Canals and Harbours, and Property.

The *Marine Regulations Branch*, with three Divisions—Ships Machinery Inspection, Hulls and Equipment Inspection, and Nautical and Pilotage—is responsible for the administration of those parts of the Canada Shipping Act that relate to the operations of Canadian ships and ships within Canadian waters. It is charged with the registry and licensing of ships, the certification of ships' officers and the engagement and discharge of ships' crews. Other responsibilities include pilotage, safety inspection of ships, handling of dangerous cargoes, prevention of oil pollution of Canadian waterways and air pollution by ships, and the investigation of marine accidents. It is also responsible for the co-ordination of Canada's participation in the Intergovernmental Maritime Consultative Organization, a United Nations body charged with the promotion of marine safety on an international basis.

The *Marine Operations Branch* is responsible for operating the departmental fleet, the Canadian Coast Guard, which consists of 146 ships of various types including both heavy and light icebreakers, an icebreaking cable repair ship, a special Arctic service ship, and two weather-oceanographic ships, the CCGS *Vancouver* and CCGS *Quadra*, which alternate in manning Weather Station "Papa" in the Pacific Ocean.

The CCGS John A. Macdonald back on the job of patrolling the Gulf of St. Lawrence after its epic voyage of 1967. The journey started on July 4 as a routine re-supply mission in the Eastern Arctic but took the icebreaker unexpectedly through the famous Northwest Passage and a rescue deep in the Polar ice, then through the Bering Strait to Vancouver and eventually home to Dartmouth, N.S., by way of the Panama Canal.

A principal duty of the fleet is tending lighthouses, buoys and other aids to navigation in Canadian coastal and inland waters. Coast Guard ships, including icebreakers, take part each summer in the Department's Arctic re-supply operations, moving some 100,000 tons of cargo to more than 40 ports of call in the Far North. These ships work in conjunction with a number of chartered commercial vessels which carry most of the cargo. During the winter, the icebreakers operate in support of commercial shipping in the Gulf of St. Lawrence from Cabot Strait to the Quebec North Shore. They also operate in the St. Lawrence River to break ice jams and prevent flooding, particularly in the section between Trois-Rivières and Montreal.

The Coast Guard ships assist with projects of other Canadian Government departments, such as scientific programs carried out by research teams based aboard various ships ranging from the Great Lakes to the High Arctic in such fields as oceanography, hydrography and related sciences. Departments concerned with the development of the Canadian Arctic and with the welfare of its population also carry out their undertakings with the aid of Coast Guard ships.

A Canadian Coast Guard Officer Training College, officially opened in September 1966 at Sydney, N.S., provides a four-year course for students, who will graduate as junior engine-room or deck officers. Upon acquiring the necessary sea experience, they may take the examinations to earn the rank of engineer first-class or master foreign going, respectively.

The *Shipbuilding Branch* prepares the basic requirements for new vessels required by the Canadian Coast Guard and supervises the design and specifications for construction. The design drawings are prepared by commercial naval architects and the ships are built, under contract, by various Canadian shipbuilding firms under the supervision of the Branch. It also performs this work for a number of other Government departments and agencies.

The *Marine Hydraulics Branch* comprises three Divisions—Marine Hydraulics, the St. Lawrence Ship Channel, and Marine Traffic Control. Marine Hydraulics deals with the hydraulic and engineering aspects of providing navigable channels for marine transportation on the Great Lakes and the St. Lawrence River. Maintenance and improvements of the St. Lawrence River below Montreal and of the Saguenay River are under the jurisdiction of the St. Lawrence Ship Channel Division, which is located in Montreal.

In the interests of St. Lawrence River traffic safety, a Marine Traffic Control Service was established on Apr. 3, 1967, as a result of studies initiated by the Department in 1964. Using very high frequency (VHF) radio equipment, the service keeps track of ship traffic in much the same way as the air traffic controllers watch over the busy sky lanes. The information needed to assist ships' masters in the safe conduct of their vessels comes from two main traffic control centres—one at Quebec and the other at Montreal—six shore stations and 18 reporting points along the river between Montreal and Les Escoumins, Que. All ships navigating the river must be equipped with the required VHF equipment to take advantage of the service.

Field Organization.—In the field, a regional management organization within the Marine Services is being developed. This system will provide the Department with more efficient means of matching resources to workloads in all areas. Included in the completed system will be the 11 district marine agencies that have existed for many years and some 15 other Marine Services field offices that in the past have been reporting individually to Marine Services directors or to the Assistant Deputy Minister, Marine.

The first step was completed in May 1967 with the establishment of the Maritime Region. This covers the Maritime Provinces and their outlying islands including Sable Island and the Magdalen Islands, and embraces the Steamship Inspection Service and Nautical and Pilotage offices in the three provinces. In all, there will be five regions each under a regional director. The other four will be Newfoundland Region; Laurentian

Region, including Quebec, Hudson Bay and Eastern Arctic waters; Lakes Region, including Ontario and Manitoba inland waters; and Western Region, including the Pacific Coast, western and northwestern Canadian waterways and the Western Arctic.

Aids to Navigation.—The Canadian system of aids to navigation is similar to that of other North American countries. Such aids maintained by the Department of Transport for Canadian and contiguous waters consist of buoys, lightships, lighthouses, day beacons, radio beacons and two electronic networks operating on the hyperbolic principle—Loran and Decca. The numbers of danger signals maintained during the years ended Mar. 31, 1966 and 1967 were:—

<i>Type of Signal</i>	<i>1965-66</i>	<i>1966-67</i>	<i>Type of Signal</i>	<i>1965-66</i>	<i>1966-67</i>
	No.	No.		No.	No.
Lights.....	3,536	3,618	Lighted and combination lighted whistling and bell buoys.....	1,675	1,821
Lightships.....	2	2	Unlighted bell and whis- tling buoys.....	20	27
Light-keepers.....	895	882	Electronic signals.....	22	21
Fog whistles and sirens...	59	67	Unlighted beacons and buoys.....	13,037	13,068
Diaphones and tyfons....	273	275			
Mechanical bells and gongs	10	12			
Hand fog horns and bells..	66	68			

All aids incorporating light or sound devices are listed in the Department of Transport annual publication *List of Lights and Fog Signals*. Information on the radio beacons and on Loran and Decca is published in *Radio Aids to Marine Navigation*.

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Icebreaking operations are continuous throughout the winter.

St. Lawrence Ship Channel.—This channel extends from about 40 miles below Quebec City to the foot of the Lachine Canal at Montreal, a distance of 200 miles. About 130 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. Widening of the channel to a minimum width of 800 feet, commenced in 1952, is about 85 p.c. completed. This section comprises about 115 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December.

The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway are made available through the Marine Traffic Control Service (see p. 836).

Steamship Inspection.—The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the formulation and subsequent enforcement of regulations concerned with the approval of design of hulls, machinery and equipment of ships; inspection during construction; periodic inspection and issuance of inspection certificates; the assignment of load lines; the conditions under which dangerous

goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; control of pollution of the atmosphere by smoke emitted by ships; control of the powering, equipment and load limits of small vessels; and the certification of marine engineers. The Board also prepares correspondence courses in marine engineering for use in Marine Engineering Schools now controlled by the Department of Labour.

The Chairman and the Board of Steamship Inspection are located at Ottawa and field offices are maintained in the principal ocean and inland ports. A total of 1,780 vessels of Canadian ownership or registry, including 476 passenger ships, 166 new ships built in Canada, 29 ships built outside Canada for registry in Canada, 18 converted or reconditioned ships and 12 vessels registered or owned elsewhere, were inspected during the year ended Mar. 31, 1967.

Pilotage.—Pilotage service functions under the provisions of Part VI and Part VIA of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 25 pilotage districts, in nine of which the Minister of Transport is the pilotage authority (see Table 15); in each of the other districts the authority is a local body appointed by the Governor in Council. There are also three districts that are administered jointly by Canada and the United States; and one area in which the Department of Transport provides qualified pilots.

Section 2.—Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government, that by municipalities and private industry being confined almost entirely to terminal or dockage facilities.

The figures available of federal capital expenditure on waterways are contained in the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance and in the annual report of the St. Lawrence Seaway Authority. However,

for several reasons, these figures cannot be regarded as an accurate indication of the present worth of the undertakings represented and therefore are not included here; the one exception is the capital expenditure made by the National Harbours Board on facilities under its jurisdiction. The capital values of the fixed assets administered by the Board at Dec. 31, 1966 amounted to \$482,975,054; this figure includes expenditure on all buildings, machinery and durable plant improvements less deductions for depreciation and the scrapping or abandonment of plant, and therefore represents a fair approximation of the present value of the properties. The total amount advanced by the Federal Government to the National Harbours Board for capital expenditure during 1966 was \$23,973,264, distributed as follows: Champlain Bridge (Montreal), \$12,595,410; Montreal, \$5,522,948; Halifax, \$2,193,293; Vancouver, \$1,629,368; Quebec, \$1,262,651; and Saint John, (N.B.), \$769,594.

Waterways Expenditure and Revenue.—Expenditure under this heading (Tables 16 to 18) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport, the Department of Public Works and the St. Lawrence Seaway Authority is shown in Table 19.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 21. Operating revenue and expenditure of facilities administered by the National Harbours Board are shown separately in Table 20.

PART V.—CIVIL AIR TRANSPORT

Section 1.—Civil Aviation Administration and Policy

Administration.—Civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919 and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Canadian Transport Commission certain regulatory functions of commercial air service (see p. 793). Part III deals with matters of government internal administration in connection with the Act.

International Air Agreements.—The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada therefore took a major part

in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. At present, Canada has air agreements with 21 other countries.

Federal Civil Aviation Policy.—The intent of Federal Government concern in civil aviation is to provide an efficient and stable service for the Canadian public and the best possible economic framework for the major and regional carriers. In formulating its aviation policy in 1964, three principles were accepted by the Government as basic. The first related to the international field and stated that air services provided by Canadian airlines should serve the Canadian interest as a whole; that these services should not be competitive or conflicting but should represent a single integrated plan which could be achieved by amalgamation, by partnership or by a clear division of fields of operations. The two major airlines agreed that the most effective way to carry out this policy would be by a clear division of their fields of operations so that outside Canada neither airline would serve any point served by the other. As a result, it was decided that Canadian Pacific Airlines Limited would serve the whole Pacific area, the whole Continent of Asia, Australia and New Zealand, Southern and Southwestern Europe and Latin America, and that Air Canada would serve Britain, Western, Northern and Eastern Europe, and the Caribbean. The only exception to this clear-cut division is that CPA would continue to serve the Netherlands. This division accounts for the whole of the world except Africa and the United States. Where decisions depend on the contemplation of service to those undesignated areas, co-operation is maintained between the two carriers in sales and agency relationships, each carrier representing the other outside its own area, so that passengers are encouraged to travel to their destinations by Canadian airlines. Other measures of co-operation, including joint advice to the Government on air negotiations and joint servicing and support arrangements, are maintained.

The second principle concerned the domestic mainline services and stated that, although competition was not to be rejected, development of competition should not compromise or seriously injure the economic viability of Air Canada's domestic operations which represent the essential framework of its network of domestic services, and in the event that competition continues, opportunity should be ensured for growth to both lines above this basic minimum.

The third principle concerned the role of regional air carriers providing scheduled service and their relationship with the mainline carriers. Recommendations were prepared by the two major airlines and the larger regional carriers which resulted in a "Statement of Principles for Regional Air Carriers" tabled in the House of Commons on Oct. 20, 1966, by the Minister of Transport. These principles are summarized as follows:—

- (1) Regional carriers will provide regular route operations into the North and will operate local or regional routes to supplement the domestic mainline operations of Air Canada and CPA; they will be limited to a regional role.
- (2) Greater scope will be allowed regional carriers in the development of routes and services by the following means: (a) where appropriate, limited competition on mainline route segments of Air Canada or CPA may be permitted to regional carriers if this is consistent with their local route development; (b) in a few cases, secondary routes at present operated by Air Canada and CPA may become eligible for transfer to regional carriers; and (c) a larger role will be allotted to regional carriers in connection with the development of domestic and international charter services, inclusive tours and new types of services.
- (3) Greater co-operation between the mainline carriers and the regional carriers will be developed in a variety of fields, ranging from technical and servicing arrangements to joint fare arrangements.
- (4) A limited policy of temporary subsidies for regional routes will be introduced, to be based upon a "use it or lose it" formula.
- (5) Firmer control will be exercised over the financial structure of regional carriers in connection with new licensing arrangements.
- (6) Regional carriers will be assisted with the acquisition of aircraft by development of a scheme for consultation between government and the carriers regarding plans for new aircraft, and by a special investigation designed to explore the possibility of developing a joint approach to this problem on the part of the carriers.

To implement the above principles the former Air Transport Board, (now the Air Transport Committee of the Canadian Transport Commission) introduced during the year the following measures:—

- (1) Rule No. 29/67 provides for the carriage of two pro-rata charter groups on any pro-rata charter flight, provided that each group is composed of not less than 40 persons;
- (2) Rule No. 30/67 provides for the operation of domestic and international inclusive tours with chartered aircraft;
- (3) General Order No. 46/67 introduces a requirement for prior approval of large aircraft acquisitions;
- (4) General Order No. 47/67 permits the operation by regional air carriers of entity and pro-rata affinity group passenger charters between mainline points, subject to certain restrictions; and
- (5) a number of temporary measures were included to facilitate passenger movement to meet the increased demands of Canada's Centennial celebrations.

Thus, in the international field, the joint approach to the provision of world-wide service by the two major Canadian carriers is intended to strengthen their position in a very competitive field and provide a better over-all service to the travelling public. In the domestic field, a degree of competition remains to provide the public with the advantages that can result from a competitive atmosphere but avoids excesses of competition, which could be ruinous to the operators and unsatisfactory to the public.

Section 2.—Current Air Services

Two major airlines, Air Canada and Canadian Pacific Airlines Limited, form the nucleus of Canada's freight and passenger air service. Current operations of these airlines are discussed briefly below, followed by short outlines of the services provided by independent airlines and a list of Commonwealth and foreign air carriers licensed to operate services into Canada.

Broadly, air transport services in Canada may be grouped into two classes—Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft, serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:—

- (1) Regular Specific Point Air Services—operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.
- (2) Irregular Specific Point Air Services—operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft from a designated base, serving a defined area or a specific point or points, at a toll per unit.
- (3) Charter Air Services—operated by air carriers that offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Air Transport Committee.
- (4) Contract Air Services—operated by air carriers that do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.
- (5) Flying Clubs—operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.
- (6) Specialty Services—operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial pest control, aerial advertising, aerial patrol and inspection, etc.

Air Canada.—Continued development in all phases of Air Canada's operations made 1966 an exceptional year in terms of both traffic and revenues. The airline carried 5,293,561 passengers on scheduled and charter services, an increase of 11 p.c. over 1965. The volume of business exceeded expectations, the airline sharing in a general increase

throughout the industry, with virtually all major air carriers reporting notable traffic growth. Total scheduled seat miles offered were 6,387,000,000, up 17 p.c. and revenue passenger-miles flown exceeded 4,193,000,000, an increase of 18 p.c. The passenger-load factor rose from 65 p.c. in 1965 to 66 p.c. in 1966.

North American passenger-miles flown, which represented almost three quarters of Air Canada's scheduled passenger traffic, increased 15 p.c. as the airline introduced additional services on most major domestic routes; 2,984,000,000 domestic passenger-miles were flown in 1966 compared with 2,591,000,000 in 1965. There was a 26-p.c. increase in scheduled transatlantic passenger traffic. On the routes to Florida, Bermuda, the Bahamas and the Caribbean, passenger-miles flown exceeded 394,000,000, up 28 p.c. over 1965.

For the fifth successive year there was a marked expansion in commodity traffic in 1966, air freight increasing 33 p.c. to 74,500,000 ton-miles. Air express rose 13 p.c. to 6,000,000 ton-miles. This exceptional growth was the result of added jet freighter capabilities as well as the rapidly growing awareness by the business community of the advantages of air transport in marketing plans.

At the end of 1966, Air Canada was operating over 63,692 unduplicated route miles, linking Canada, the United States, the British Isles, Continental Europe and the Caribbean. At year-end, its fleet consisted of 18 Douglas DC-8s, 6 DC-9s, 23 Vickers Vanguard and 39 Vickers Viscount turbo-prop aircraft. The Company also had four stretched DC-8 and 12 stretched DC-9 aircraft on order, scheduled for delivery in 1967, the addition of which increased to 40 Air Canada's fleet of pure jets by the end of that year. Announcement was made in early 1968 of the ordering of three 368-passenger Boeing 747 jetliners for delivery in 1971, to be used on transcontinental and transatlantic routes.

¹ Includes non-scheduled service.

² Includes excess baggage and express.

³ Includes other revenue.

Canadian Pacific Air Lines Limited.—CPA in 1966 operated a 57,346-mile route pattern linking five continents and major cities of Canada. This included 6,882 miles of Canadian routes, 2,444 miles of which were transcontinental service. In 1966 the airline carried 738,857 passengers, the largest number since the company's formation in 1942. Revenue passenger-miles showed a substantial gain to 1,280,008,232 from 1,144,936,000 in the previous year.

CPA's international routes, 50,464 miles in extent, operate from Vancouver to Honolulu, Fiji, New Zealand and Australia on the South Pacific Service; to Japan and Hong Kong via the Great Circle Route across the North Pacific; from Vancouver via Calgary and Edmonton to Amsterdam on the Polar Route, and across the Atlantic from

Toronto and Montreal to Holland, the Azores, Portugal, Spain and Italy. A South American network serves Mexico, Peru, Chile and Argentina from Montreal, Toronto and Windsor in Eastern Canada and from Vancouver and Calgary in the West. During 1966-67 two new routes were inaugurated—Toronto to Honolulu non-stop and a daily flight from Vancouver to San Francisco and return. Within Canada a transcontinental service links Vancouver, Winnipeg, Toronto and Montreal and a network of north-south routes serves British Columbia, the Yukon and western Alberta.

CPA's fleet consists of 17 aircraft—seven Douglas DC-8s, six Douglas DC-6Bs and three Douglas DC-3s. Four DC-8 series 63, called Spacemasters, are on order for delivery during 1968. These aircraft will carry 199 passengers in CPA's seat plan. Seven Boeing 737 short-medium jets are on order for late 1968 and early 1969 delivery and will replace piston-engined aircraft on domestic routes.

Independent Airlines.—In addition to the two major Canadian air carriers—Air Canada and Canadian Pacific Airlines Limited—there are four domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Eastern Provincial Airways (1963) Ltd., Gander, Nfld.; Quebecair, Rimouski, Que.; TransAir Limited, Winnipeg, Man.; and Pacific Western Airlines Ltd., Vancouver, B.C.

Licensed Canadian air carriers operating in Canada as at Mar. 31, 1967, held valid operating certificates covering 83 scheduled, 177 flying training, and 1,718 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation, act as feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising, aerial patrol and inspection.

Eastern Provincial Airways (1963) Ltd.—This company operates throughout the Atlantic Provinces, eastern Quebec and Labrador. It serves Charlottetown and Summerside in Prince Edward Island; Moncton and Dalhousie in New Brunswick; New Glasgow and Halifax in Nova Scotia; Deer Lake—Corner Brook, Gander, St. John's, St. Alban's and St. Anthony in Newfoundland; Goose Bay, Saglek, Wabush—Labrador City, and Twin Falls—Churchill Falls in Labrador; and Sept Îles and the Magdalen Islands in Quebec.

The Airways fleet consists of three Handley-Page Dart Heralds, one DC-4, four DC-3s, five PBY Cansos, seven DH Beavers and six DH Otters, one Beech Baron, two Super Cubs and two helicopters. The company carries on an extensive air freight service throughout the above areas and conducts many specialty services such as mineral exploration, 'package trips' (hunting and fishing), ambulance service and forestry, seal and ice patrol services.

Quebecair.—Quebecair, with head office at Rimouski, offers scheduled services in Quebec and Labrador. The company dates from 1946 and was founded under the name "Le Syndicat d'Aviation de Rimouski". In 1947 the name was changed to Rimouski Airlines and the company inaugurated an air transport service between the shores of the Gulf of St. Lawrence, linking Matane, Mont Joli, Rimouski, Forestville, Baie Comeau and Sept Îles. Until 1953 service was limited to towns and small centres located between Rimouski and Gaspé on the south shore of the St. Lawrence River and between Forestville and Sept Îles on the north shore. In 1953 with amalgamation of Gulf Aviation the name "Quebecair" was adopted. With the expansion of mining and industrial activities, Quebecair extended its network to Quebec City and Schefferville in 1955, to Montreal in 1957, to Gagnon and Rivière du Loup in 1959, to Wabush in 1960, to Manicouagan and Saguenay in 1961 and to Murray Bay in 1962. During 1965, Quebecair acquired Matane Air Services Ltd., Northern Wings Ltd., Northern Wings Helicopters Ltd., and merged its scheduled services with those of its two subsidiaries Northern Wings Ltd. and Matane Air Services Ltd.

Quebecair is primarily responsible for the operation of scheduled service by large aircraft; the subsidiaries handle flights by light aircraft, charter and contract services. Scheduled services are operated over 4,000 unduplicated miles and some 30 localities situated in nine economic regions of Quebec and Labrador are served on a daily basis. Points linked are: Montreal, Quebec, Murray Bay (Charlevoix), Rivière du Loup, Rimouski, Mont Joli, Matane, Saguenay, Forestville, Baie Comeau (Hauterive), Manicouagan, Sept Îles, Gagnon, Wabush (Labrador City), Schefferville, Rivière au Tonnerre, Mingan, Havre St. Pierre, Port Menier, Gaspé, Baie Johan Beetz, Aguanish, Natashquan, Kegashka, Gethsémani, Harrington Harbour, Tête-à-la-Baleine, La Tabatière, St. Augustin, Old Fort Bay, St. Paul and Blanc Sablon.

At the end of 1966, the combined fleet of Quebecair and subsidiaries totalled 33 aircraft: four turbo-prop Fairchild F-27s, nine DC-3s, two Canso PBYS, one Curtiss C-46, three Lockheed 10s, one Beechcraft D-18, two Otter, four Beaver, two Cessna 185 and five Bell Helicopters 47-G-2. During that year, Quebecair and subsidiaries carried 180,698 passengers and flew 122,767 mail-ton-miles and 706,436 freight-ton-miles.

TransAir Limited.—TransAir Limited, with headquarters at the Winnipeg International Airport, operates scheduled services in Manitoba, Saskatchewan, Ontario and the Northwest Territories and charter flights throughout Canada and to points around the world. The company's scheduled mainline services are operated in three areas: (1) The Prairies—from Winnipeg to Brandon-Regina-Saskatoon-Prince Albert and return, and from Winnipeg to Dauphin-Yorkton and return; (2) Manitoba and Central—from Winnipeg to The Pas-Thompson-Churchill and return, from Winnipeg to The Pas-Flin Flon-Lynn Lake and return, and from Winnipeg to Red Lake-Fort William/Port Arthur and return; and (3) Arctic—from Churchill to Rankin Inlet-Baker Lake and return and from Churchill to Rankin Inlet-Coral Harbour and return.

TransAir's fleet of multi-engine aircraft (DC-7C, Viscount, DC-4, DC-3 and C-47) is stationed at Winnipeg and at the company's major base at Churchill, Man. The DC-7C is used primarily on international and other long-range charter flights. Since 1961, under contract with the United States Air Force, TransAir has operated from Winnipeg and Churchill the vertical re-supply flights to the four main sites in the Canadian sector of the Distant Early Warning Line in the extreme Arctic and is regarded as the largest contract cargo carrier in Canada.

Consistent with the Canadian Transport Commission regional air-carrier policy, TransAir in 1967 sold its "bush" (primarily single-engine float and ski-equipped) aircraft, services and equipment in northwestern Ontario and Manitoba and hence has discontinued the network of flights it formerly operated from Sioux Lookout and Pickle Lake in Ontario, Norway House and Lac du Bonnet in Manitoba to points in adjacent areas. As a result, the company is now concentrating on its scheduled operations to larger centres. The company's routes are being studied in detail by the manufacturers of several turbo-prop and pure-jet aircraft and it is anticipated that modern aircraft of these types will be introduced in 1968. In 1966, TransAir carried 116,348 passengers, flew 3,562,836 miles and 6,158,594 revenue-ton-miles; employees numbered 341 and pilots 46.

Pacific Western Airlines Ltd.—Pacific Western Airlines Ltd., with head office at Vancouver International Airport, operates over more than 7,700 route miles; its services include scheduled mainline, local regular unit toll and charter flights in Saskatchewan, Alberta, Yukon Territory, the Northwest Territories including the Arctic islands, and British Columbia. Regularly scheduled mainline services are operated northbound from Edmonton to Dawson Creek, Peace River, McMurray, Uranium City, Fort Smith, Cambridge Bay, Fort Resolution, Hay River, Yellowknife, Fort Simpson, Wrigley, Norman Wells and Inuvik. The only no-reservations-required Airbus service in Canada operates daily between Edmonton and Calgary. The company also operates international charter services.

On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River, Campbell River, Hudson's Hope and Port Hardy and local services are operated between Prince Rupert, Stewart, Ford's Cove, Anyox, Maple Bay and Alice Arm in northern British Columbia. In addition, local charter services are operated out of Prince George, Prince Rupert and Stewart and large aircraft charter services are operated from major centres.

Aircraft operated by Pacific Western number 30 and include Lockheed Hercules (freight), DC-7Cs, DC-6Bs, DC-6s, Convair 640 Javelin jet-props, and DC-4s on mainline and charter services; Otters, Beavers, Grumman Goose and Cessna aircraft are used on local charter services. Boeing 707 and Boeing 737 jet aircraft are on order for 1968 delivery. In 1966, 339,525 revenue passengers were carried, 27,998,405 lb. of freight and express were carried and 5,695,180 miles were flown.

Commonwealth and Foreign Scheduled Commercial Air Services.—At the end of 1967, there were 26 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences issued for the following international scheduled commercial air services into Canada:—

- Aeronautes de Mexico, S.A.*, operating between Montreal and Toronto (Canada) and Mexico City (Mexico).
- Aeroflot*, operating between Moscow (U.S.S.R.) and Montreal (Canada).
- Air France (Compagnie Nationale Air France)*, operating between Paris (France) and Montreal (Canada) and beyond to Chicago (U.S.A.) with traffic rights, and to other points beyond in transit.
- Alaska Coastal Airlines*, operating between Ketchikan (U.S.A.) and Prince Rupert (Canada).
- Alitalia (Italian International Airlines)*, operating between Rome and Milan (Italy) and Montreal (Canada) and beyond to Chicago (U.S.A.) with traffic rights, and to other points beyond in transit.
- Allegheny Airlines Inc.*, operating between Erie (U.S.A.) and Toronto (Canada).
- American Airlines Inc.*, operating between Toronto (Canada) and New York/Newark (U.S.A.) and between Chicago (U.S.A.) and Toronto (Canada) and between Los Angeles (U.S.A.) and Toronto (Canada).
- British Overseas Airways Corp.*, operating between London and Manchester (England), Prestwick (Scotland) and Montreal and Toronto (Canada), beyond Montreal with traffic rights to Chicago and beyond in transit to Boston, New York and Detroit (U.S.A.), and between London (England), Prestwick (Scotland), Gander (Canada), Bermuda, Nassau, Montego Bay, Barbados and Trinidad.
- Deutsche Lufthansa Aktiengesellschaft (Lufthansa German Airlines)*, operating between Germany and Montreal (Canada) and beyond in transit to Los Angeles (U.S.A.) and Mexico City.
- Eastern Air Lines, Inc.*, operating between the terminals Ottawa and Montreal (Canada), and New York (U.S.A.), and between the terminals Ottawa and Montreal (Canada) and Washington (U.S.A.), and between Tampa/Miami (U.S.A.) and Toronto (Canada) and between Buffalo (U.S.A.) and Toronto (Canada).
- Irish International Airlines (Aerlínte Éireann Teoranta)*, operating between Shannon (Ireland) and Montreal (Canada) and beyond in transit to Chicago (U.S.A.).
- KLM Royal Dutch Airlines*, operating between Amsterdam (Netherlands) and Montreal (Canada) and beyond in transit to Houston (U.S.A.), and for cargo to New York.
- Mohawk Airlines, Inc.*, operating between Toronto (Canada) and Buffalo (U.S.A.) and Rochester (U.S.A.) and Toronto (Canada) and between Burlington (U.S.A.) and Montreal (Canada); (the service to both Rochester and Burlington terminates October 1969).
- North Central Airlines, Inc.*, operating between Port Arthur/Fort William (Canada) and Duluth/Superior (U.S.A.) and between Detroit (U.S.A.) and Toronto (Canada).
- Northeast Airlines, Inc.*, operating between Montreal (Canada) and Boston (U.S.A.) via Concord, Montpelier-Barre, Burlington and White River Junction (U.S.A.) and between Tampa/Miami (U.S.A.) and Montreal (Canada).
- Northwest Airlines, Inc.*, operating between Minneapolis (U.S.A.) and Winnipeg (Canada).

Pan American World Airways Inc., operating between New York and Boston (U.S.A.), Gander (Canada), Shannon (Ireland) and London (England).

Qantas Empire Airways Ltd., operating between Sydney (Australia), San Francisco (U.S.A.) and Vancouver (Canada).

Sabena Belgian World Airlines, operating between Brussels (Belgium), and Montreal (Canada) and beyond in transit to New York (U.S.A.) and Mexico City.

Scandinavian Airlines System, operating between Stockholm (Sweden), Oslo (Norway), Copenhagen (Denmark), and Montreal (Canada), and beyond in transit to New York and Chicago (U.S.A.).

Seaboard and Western Airlines, Inc., operating between points in the United States, Gander (Canada) and points in Europe.

Swiss Air Transport Company Ltd., (*Swissair*), operating between Zurich and Geneva (Switzerland) and Montreal (Canada) and beyond in transit to Chicago (U.S.A.).

United Air Lines, Inc., operating between Vancouver (Canada) and Seattle (U.S.A.) and between Chicago (U.S.A.) and Toronto (Canada).

West Coast Airlines, Inc., operating between Calgary (Canada) and Spokane (U.S.A.).

Western Air Lines, Inc., operating between Calgary (Canada) and Great Falls/Denver (U.S.A.) and between Los Angeles/San Francisco (U.S.A.) and Vancouver (Canada).

Wien-Alaska Airlines Inc., operating between Whitehorse, Y.T. (Canada) and Fairbanks and Juneau (Alaska, U.S.A.).

Flying Schools and Clubs.—At the end of 1966, 80 commercial flying schools were registered as members of the Air Transport Association of Canada. During the year, these schools instructed and graduated 2,286 students as private pilots and 840 students as commercial pilots.

Membership in 37 flying clubs connected with the Royal Canadian Flying Clubs Association numbered 9,495 at the end of 1966. During the year these clubs instructed and graduated 1,466 students as private pilots and 262 students as commercial pilots.

Weather Services.*—Weather services are provided by the Meteorological Branch of the Department of Transport to meet the requirements of the general public and all basic economic endeavours such as agriculture, industry, forestry, shipping and fishing. Meteorological service is provided to national and international aviation. The military meteorological requirements in Canada and overseas are met by special co-operative arrangements with the Department of National Defence. The observing and forecasting of ice conditions in navigable waters, both inland and coastal, have expanded rapidly in recent years.

Canadian Weather Offices are linked by 59,100 miles of teletype and radio-teletype circuits, and a national facsimile system 15,900 miles long is used for the distribution of meteorological information in chart form. As of Jan. 1, 1967, the Branch maintained 289 surface synoptic and hourly weather reporting stations, at 33 of which upper air observations are taken, and 2,399 climatological stations, making a total of 2,432 weather reporting stations. One Ocean Weather Station in the Pacific, 1,000 miles west of Vancouver, is maintained under International Agreement.

Ground Facilities.—Aircraft landing areas in Canada are listed in Table 2 and classified by administrative agency as licensed or unlicensed land facilities or seaplane bases, and military airfields. Licensed aerodromes are those that are inspected at regular intervals and meet specific standards, whereas unlicensed aerodromes may not meet the same standards. In addition to aerodromes, a network of radio aids to navigation is maintained to facilitate en route navigation and safe landings under instrument conditions. (See item on Aeronautical Navigation, p. 876.)

Air Traffic Control.—The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled airspace and between aircraft and obstructions on the movement area of controlled airports. This is accomplished through airport control, terminal control and area control services. These and other allied services are described below.

Airport Control Service provides control service to flights operating in the vicinity of major civil airports where the volume and type of aircraft operations, weather conditions and other factors indicate its need in the interest of flight safety. The service also includes the control of all traffic on the manoeuvring area of the airport. Control is effected by means of direct radiotelephone communication or visual signals. Airport control towers are located at: Whitehorse, Y.T.; Fort St. John, Prince George, Victoria (international), Port Hardy, Abbotsford, Vancouver (international), Pitt Meadows and Kamloops, B.C.; Lethbridge, Calgary, Edmonton (industrial) and Edmonton (international), Alta.; Saskatoon and Regina, Sask.; Winnipeg (international) and St. Andrews, Man.; Lakehead, Windsor, London, Toronto Island, Toronto (international), Buttonville, Ottawa (international), and North Bay, Ont.; Montreal (international), Cartierville, Quebec, Baie Comeau and Sept îles, Que.; Moncton, Fredericton and Saint John, N.B.; Halifax (international), and Sydney, N.S.; and Gander (international) and St. John's, Nfld. Airport control service was instituted at St. Jean, Que., for Expo 67. Airport control service is provided at Resolute Bay, N.W.T., for a three-month period each year.

Area Control Service provides control service to en route flights operating within controlled airspace during weather conditions that prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Area control centres are located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., Moncton, N.B., Goose Bay and Gander, Nfld. Each centre is connected with control towers, terminal control units, communications stations and operation offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through radio communications facilities available at these stations to all aircraft requiring area control service. Area control centres are also capable of communicating directly with most pilots flying within their control areas. Each area control centre is similarly connected with adjacent centres, including centres in the United States, for the purpose of co-ordinating control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of all aircraft operating in accordance with the Instrument Flight Rules (IFR) and a general record of aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within controlled airspace over Newfoundland, the Gander Control Centre provides control service within the airspace over approximately one half of the North Atlantic Ocean.

Terminal Control Service consists of the provision of separation to aircraft operating in accordance with IFR in the vicinity of all controlled airports. This service is normally provided by area control centres but separate terminal control units have been established at Calgary, Alta.; Saskatoon and Regina, Sask.; Lakehead, North Bay and Ottawa, Ont.; Quebec, Que.; and Halifax, N.S.

Northern Area Control Service, inaugurated Sept. 26, 1963, is provided by the Edmonton, Winnipeg, Moncton and Goose area control centres for aircraft flying above 23,000 feet, and is available throughout more than 3,000,000 sq. miles of Northern Canada.

Radar Control Service is provided extensively in the control of IFR traffic, both in terminal areas and while en route. Terminal service is provided at Vancouver, B.C.; Calgary and Edmonton, Alta.; Regina and Saskatoon, Sask.; Winnipeg, Man.; Lakehead, Toronto, North Bay and Ottawa, Ont.; Montreal and Quebec, Que.; Moncton, N.B.; Halifax, N.S.; and Gander, Nfld. En route service is provided by area control centres and by one radar unit located at Kenora, Ont. Ground Control Approach Service is provided at Gander, Nfld. and Precision Approach Radar Service is provided at St. John's, Nfld.; Halifax, N.S.; Montreal, Que.; Toronto, Ont.; Winnipeg, Man.; and Vancouver, B.C.

Flight Information Service is provided by all air traffic control units, but particularly by all area control centres. It consists of advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refueling and transportation facilities, and other data of assistance to the pilot in planning or conducting a flight.

Alerting Service ensures that appropriate organizations are notified of aircraft that may be in need of search and rescue aid. This entails the maintenance and constant supervision of a continuous record of active flights to ensure that failure of an aircraft to arrive at the planned destination notified to air traffic control is detected immediately. The service is available to any pilot who files either a flight plan or flight notification with air traffic control.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary at certain designated customs airports. This is achieved through the prompt notification by air traffic control, at a pilot's request, of the customs officer at the destination airport of the intended arrival and of the need for customs clearance.

Airspace Reservation Service provides reserved airspace for specified air operations within controlled airspace and information to other pilots concerning these reservations and military activity areas in controlled and uncontrolled airspace. The Airspace Reservation Co-ordination Office, located at Ottawa, is responsible for co-ordinating all airspace reservations in Canada and in the Gander and Vancouver Oceanic Control Areas.

Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

Airport Activity.—Canada's major civil airports were 23.4 p.c. busier during 1966 than in 1965. The 33 Department of Transport tower-controlled airports reporting for the whole year recorded 3,316,669 aircraft movements (landings, take-offs and simulated approaches) compared with 2,688,239 recorded for the same airports in 1965.

Itinerant movements (excluding purely local traffic) accounted for 40 p.c. of the total traffic and for the third consecutive year Montreal International Airport ranked first in this category. The five leaders were: Montreal International 125,756; Toronto International 119,493; Vancouver International 106,930; Winnipeg International 96,619; and Cartierville 92,540. In the five-year period 1962-66, inclusive, itinerant movements increased 46.9 p.c. from 898,556 to 1,320,417, most of the increase occurring in the past three years.

Toronto reported the greatest number of scheduled flights in 1966 with 72,446 movements. Montreal was second with 68,630, followed by Vancouver with 29,148, Winnipeg with 21,594 and Calgary with 17,966. Over the five-year period local movements showed an increase of 46.9 p.c. from 1,288,706 in 1962 to 1,892,615 in 1966.

For the fifth consecutive year, Cartierville was the busiest airport in total traffic with 329,890 movements including local traffic and simulated approaches (practice instrument runs without touching the runway). Winnipeg was second with 269,555 movements followed by Montreal with 237,947, Toronto Island with 228,252 and Calgary with 206,088.

Section 3.—Civil Aviation Operation Statistics

Table 3 provides a picture of commercial civil aviation in Canada for the years 1963-66. It shows data on miles and hours flown, traffic carried, fuel and oil consumed, employees, salaries and operating revenues and expenses, by type of service, for Canadian air carriers followed by summary statistics for all Canadian carriers and those foreign companies operating scheduled services in Canada. Figures for Canadian carriers include domestic and international operations, and figures for foreign companies cover miles and hours flown over Canadian territory only, and exclude passengers and goods in transit through Canada. Unit toll service refers to the transportation of passengers or goods at a toll per unit, whereas bulk service is the transportation of passengers or goods at a toll per mile or per hour for the entire aircraft. Other flying services comprise non-transportation services such as flying training, aerial photography and aerial patrol and inspection.

Summary statistics of Canadian and foreign commercial air carriers, by type of carrier, are shown in Table 4 for 1966. For the foreign carriers, hours and miles reported are those flown over Canadian territory only, and passengers and goods in transit through Canada are excluded. It is interesting to note that the six scheduled carriers—those holding Class I or Class II licences from the Canadian Transport Commission—accounted for 91 p.c. of all revenue passengers transported by Canadian carriers during 1966. The weight of goods transported by scheduled carriers amounted to approximately 69 p.c. of the total tonnage moved by all Canadian air carriers.

PART VI.—OIL AND GAS PIPELINES*

Oil Pipelines.—Since the late 1940s large capital expenditures have been made each year for oil pipeline construction. Expenditures in 1966 were an estimated \$78,600,000 and are forecast at \$55,000,000 for 1967, raising the estimated cumulative total for the period 1950-67 to \$764,000,000.

The prime components of the network of Canadian oil pipelines are the trunk lines of the Interprovincial Pipe Line Company and the Trans Mountain Oil Pipe Line Company. The bulk of domestic crude oil is carried in these lines. Refineries that do not rely on these systems are located in the oil producing regions such as Calgary and Edmonton. The Interprovincial system carries crude oil eastward from Edmonton, receiving and discharging oil at various locations along its length. The Trans Mountain system operates similarly westward from Edmonton. Supplying these two trunk lines are pipeline systems funnelling oil from hundreds of fields into storage tanks at the pipeline terminals. Some of

* Prepared in the Mineral Resources Division, Department of Energy, Mines and Resources, Ottawa.

these feeder lines are impressive in themselves not only in size of pipe and in length of route but in the volumes of oil that they transport. Most of the feeder lines are in Alberta, which is to be expected because of the pre-eminent position of that province in oil production. Two significant additions were made in 1966. A 266-mile, 16-inch pipeline was completed from the Great Canadian Oil Sands Limited project near Fort McMurray to Edmonton. Starting late in 1967, this line will carry the first shipments of synthetic crude oil recovered from the Athabasca 'Tar' sands at the rate of 45,000 bbl. daily. In northwestern Alberta, Rainbow Pipe Line Company, Ltd. completed the initial 235 miles of 20-inch pipeline from the important new Rainbow Lake producing area to the Mitsue Pipe Line at Utikuma Lake. Construction of an additional 184 miles of 24-inch line to connect with Interprovincial at Edmonton, and 59 miles of 20-inch line from Rainbow Lake north to the Zama Lake area, are scheduled for completion in the spring of 1967. Initial capacity of the line will be 50,000 bbl. daily, with ultimate capacity rated at 250,000 bbl. daily.

The main pipeline terminal at Edmonton has eight crude oil feeder lines, including the Interprovincial extension to Redwater but excluding the Rainbow line, as follows:—

<i>Pipeline</i>	<i>Length</i>	<i>Capacity</i>	<i>General Area of Supply Related to Edmonton</i>
	miles	bbl./day	
Britamco Pipe Line Co. Ltd.	410	60,000	south-southeast
Federated Pipe Lines Ltd.	517	151,000	northwest
Imperial Pipe Line Co. Ltd.	311	78,400	southwest
Interprovincial Pipe Line Co.	31	110,000	northeast
Pamco Ltd. (Edmonton Pipe Line Div.)	82	15,000	southeast
Peace River Oil Pipe Line Co. Ltd.	704	73,000	northwest
Pembina Pipe Line Ltd.	920	154,000	west-southwest
Texaco Exploration Company.	173	111,000	south

In addition, three pipelines are connected to the Interprovincial at Hardisty, some 100 miles southeast of Edmonton. Here, Gibson Associated Oil Ltd. makes deliveries of up to 15,000 bbl. daily of oil from fields just south of the pipeline terminal. Husky Pipe Line Ltd. takes deliveries of condensate and delivers a blended crude, incorporating the light condensate received and the heavy Lloydminster asphaltic crude. The Husky pipeline is a twin line system carrying the condensate to Lloydminster in one line and returning the blended oil in the other line, which has a capacity of 15,000 bbl. daily. The third pipeline connection, Bow River Pipe Line Ltd., carries crude from the most southerly oil fields in Alberta, near Taber; this line has a capacity of 18,000 bbl. daily. Home Oil Limited operates a pipeline serving refineries in the Calgary area with oil from fields north of the city; the line also has connections with the Rangeland pipeline which, in turn, is linked to the Texaco line going north to Edmonton. Also serving Calgary is the oldest pipeline in Alberta operated by Valley Pipe Line Company, which carries crude from the historically important Turner Valley in quantities up to 15,000 bbl. daily.

The Trans Mountain pipeline also has a second receiving terminal in Alberta at Edson where the Peace River pipeline makes deliveries to Trans Mountain from fields to the north. In British Columbia, the Western Pacific Products-Crude Oil Pipelines Ltd. carries crude over a distance of 500 miles from fields near Fort St. John in north-eastern British Columbia to the Trans Mountain pipeline at Kamloops; this line has a capacity of 45,000 bbl. daily.

Three main pipeline systems carry crude oil from Saskatchewan fields to the Interprovincial pipeline. The largest is the Westspur Pipe Line Company-Producers Pipelines Ltd. network which delivers crude from the important southeast Saskatchewan producing area across the Saskatchewan-Manitoba border to the Interprovincial terminal at Cromer. Capacity of this system to Cromer is 175,000 bbl. daily. The Westspur-Producers line also carries crude delivered to it by Trans-Prairie Pipelines Ltd. from fields in the Midale area of southeast Saskatchewan. In southwest Saskatchewan, the South Saskatchewan Pipe Line Company takes medium-gravity crude from fields near Swift Current to the Interprovincial pipeline at Regina; this pipeline has a capacity of 70,000 bbl. daily.

The third system is the mid-Saskatchewan pipeline of Royalite Oil Company. This pipeline has a capacity of 10,000 bbl. daily and carries crude oil from the Coleville-Dodsland area to the Interprovincial terminal at Kerrobert.

There is only one pipeline in Manitoba serving the producing fields in the general area of Virden. It carries crude to the Interprovincial terminal at Cromer and has a capacity of 23,000 bbl. daily.

Interprovincial Pipeline.—The system of Interprovincial Pipe Line Company is Canada's longest oil pipeline. It incorporates the wholly owned subsidiary in the United States, Lakehead Pipe Line Company Incorporated, and has a right-of-way length of 2,025 miles including a 95-mile lateral to Buffalo, New York. The system has two complete oil lines between Edmonton and Superior, Wisconsin, and in certain high-traffic sections, such as between Cromer and Gretna in Manitoba, there are three lines. The pipeline can deliver 15 grades of crude oil. Year-end capacities of the various sections of the pipeline are shown below for 1966 and for 1967.

Section	1966	1967
	bbl./day	bbl./day
Edmonton-Regina.....	383,000	516,000
Regina-Cromer.....	428,000	532,000
Cromer-Gretna.....	586,000	709,000
Gretna-Superior.....	548,000	664,000
Superior-Sarnia.....	442,000	563,000
Sarnia-Port Credit.....	229,000	280,000
Westover-Buffalo.....	45,000	76,000

Interprovincial serves 26 refineries: one at Lloydminster via the Husky pipeline; one at Saskatoon via Saskatoon pipeline from Mildred; one at Moose Jaw via B-A Saskatchewan pipeline from Stony Beach; two at Regina; one at Brandon via Anglo Canadian pipeline from Souris; two at Winnipeg via Winnipeg pipeline from Gretna, 11 in the United States either directly or through connecting carriers; three at Sarnia; two at Oakville; one at Clarkson; and one at Port Credit.

Trans Mountain Pipeline.—The system of Trans Mountain Oil Pipe Line Company extends from Edmonton to Vancouver via Jasper and has a right-of-way length of 780 miles, including a section of 57 miles in the United States which belongs to a wholly owned subsidiary of Trans Mountain. The capacity of the system is 250,000 bbl. daily. Trans Mountain serves eight refineries: one at Kamloops; four at Vancouver; and three in the Puget Sound region of Washington State. Under a recent contract with British American Oil Company Limited, facilities have been completed at the Vancouver terminal to handle storage and transfer of liquid propane from railway tank cars to refrigerated Japanese tankers. First loading under the ten-year contract was made in October 1966.

Montreal-Portland Pipeline.—The Montreal refinery centre is served by a 236-mile pipeline which is a joint system of Montreal Pipe Line Company and its wholly owned subsidiary in the United States, Portland Pipe Line Corporation. This line takes delivery of tanker-borne crude from Venezuela, the Middle East and Africa at Portland, Maine. In 1965, the company completed a 24-inch pipeline alongside the existing 18-inch and 24-inch crude oil lines. This provides a very flexible system which can deliver, under existing horsepower, 356,000 bbl. daily to the six refineries at Montreal.

Product Pipelines.—Traditionally, a product pipeline carries refined products from oil refineries to truck terminals in large consuming centres. However, with the growth of natural gas processing in Canada, which results in large volumes of products such as propane, butane and pentanes plus being produced, a new type of product line has emerged which carries these products to markets or to refineries.

There are three product lines in Eastern Canada, all supplying markets in Ontario with refined petroleum products. Two pipelines, Sun-Canadian Pipe Line Company and Sarnia Products Pipe Line, run from refineries at Sarnia to bulk plants in London, Hamilton

and Toronto. Trans Northern Pipe Line Company, once a pipeline carrying products from Montreal to markets in Ontario as far west as Hamilton, now has a two-way flow. Products from Montreal are now delivered only in the area east of Brockville, including the Ottawa valley; products from refineries west of Toronto are carried eastward as far as Kingston.

In Western Canada, the recently constructed Petroleum Transmission Company pipeline carries propane, butane and pentanes plus from a plant at Empress in Alberta to Winnipeg in Manitoba, a distance of 578 miles. The predominant product carried is propane which is also marketed at various locations along the line. Elsewhere in Alberta, the Rimbey Pipe Line Company transports condensate from the Rimbey gas plant and takes deliveries from the Rangeland condensate pipeline to serve areas north of Calgary as far as Edmonton. Also going to Edmonton are three separate pipelines, one each for propane, butane and pentanes plus, running from the Leduc conservation gas plant. Near Calgary, Home Oil Company operates a condensate pipeline to serve refineries there and also to make deliveries to the Rangeland condensate pipeline. There are other condensate pipelines in Alberta, most of which are associated primarily with production and do not serve end users. During 1966, the Rangeland Pipeline Division of Hudson Bay Oil and Gas Company Limited laid a 191-mile, 12-inch condensate pipeline in western Alberta from Sundre to Pincher Creek, to tie in with the existing system that connects to pipelines in the United States.

Pipeline Tariffs.—Typical of the charges to move crude oil are the following pipeline tariffs:—

	<i>Charge</i>	<i>Distance</i>
	cts. per bbl.	miles
Edmonton to Vancouver.....	40.0	718
Edmonton to Regina.....	20.7	438
Edmonton to Winnipeg.....	30.2	847
Edmonton to Sarnia.....	48.0	1,743
Edmonton to Port Credit.....	51.0	1,899
Portland to Montreal.....	10.5	236

Natural Gas Pipelines.—Natural gas now accounts for 17 p.c. of Canada's energy requirements and, in addition, large volumes are delivered to markets in the United States. Although relatively small amounts of natural gas are transported in other areas of the world as a liquid under refrigeration, all of the gas used in Canada as well as in North America as a whole is moved by pipeline. Despite the current importance of natural gas, major gas pipelines were established in Canada only in recent years and it was not until 1958 that natural gas was used in provinces as far east as Quebec. Now, however, there is an extensive network of pipelines serving most centres of population from Vancouver to Montreal and delivering gas to several points of export on the United States border.

Since the mid-1950s when large-volume gas removal was authorized from Alberta, capital expenditures in gas pipeline construction have constituted a significant proportion of the country's total outlay for transportation facilities. In 1966, capital expenditures of \$74,700,000 were made, and forecast expenditures for 1967 amount to \$112,000,000. Thus, it is estimated that cumulative total expenditures for the period 1955-67 will amount to \$1,367,000 for gathering and transmission systems, with an additional \$880,000 for distribution systems.

Pipelines are usually categorized under three headings—gathering lines, transmission lines and distribution lines. The gathering lines are those that take gas from the wells or separators to the field gate or some other specified point. Transmission lines are normally the large-diameter pipelines that take gas from gathering lines and deliver it to the distributors principally at the 'city gate'. In total, there were 45,250 miles of all types of gas pipeline in operation at the end of 1966, of which 5,100 miles were gathering, 14,600 miles were transmission and 25,550 miles were distribution.

Unlike oil pipeline companies which are common carriers that transport oil for a fixed charge, gas pipeline companies, with few exceptions, own the gas that is transported. The principal exception is the Alberta Gas Trunk Line Company which delivers virtually all of the gas exported from Alberta to the provincial boundary where main transmission companies accept delivery. This is an important exception because most of the Canadian gas reserves are in Alberta. The right-of-way distance of Alberta Gas Trunk is 1,788 miles.

Some details of the main transmission systems are contained in the following paragraphs. Like oil pipelines, there are two trunk lines serving Canada. One is the Trans-Canada pipeline and the other is the Westcoast pipeline.

Trans-Canada Pipeline.—The Trans-Canada pipeline, extending from the Alberta border near Burstall, Sask., makes its way eastward through Saskatchewan and Manitoba to the Ontario Lakehead cities of Port Arthur and Fort William and then follows a broad, northerly-arched route through the clay belt of Ontario, then southward via North Bay to Toronto. There the line divides, one part going to the western region of Ontario and the other eastward along the northern shore of Lake Ontario and the St. Lawrence River to Montreal. Lateral pipelines serve communities that are not within the immediate reach of the main pipeline. Trans-Canada is Canada's longest pipeline, with a right-of-way distance of 2,462 miles. The maximum amount of gas delivered in any one day by the company in 1966 was 1,356,000 Mcf. Export sales average about 221,000 Mcf. daily.

In August 1966, the company received Federal Government approval to construct a major transmission line, jointly with an American company, across the United States from Emerson, Man., to Sarnia, Ont., after giving certain guarantees regarding the future expansion of its Canadian system. At the end of 1966, the project was awaiting approval of United States regulatory authorities. The company completed looping of its main line from the Alberta-Saskatchewan border to Winnipeg in 1966.

Westcoast Transmission Company.—The supply of gas for Westcoast comes mainly from fields in northeastern British Columbia but significant quantities are gathered in northwestern Alberta. The main line from Fort St. John runs in a southerly direction to Vancouver and to the United States border at Sumas, B.C. An extension to its system from the Fort St. John area to the Fort Nelson area permits the pipeline system to pick up gas from the main areas stretching from Dawson Creek to the Yukon-Northwest Territories border. The right-of-way distance of the Westcoast system is 892 miles.

Alberta Natural Gas Company.—Although the Alberta Natural Gas pipeline is only 107 miles long, it forms part of one of the major gas export pipelines that carries Canadian gas as far south as California. The line extends from the Alberta border through the Crowsnest Pass to Kingsgate, B.C., where it crosses the International Border and continues through Idaho.

Other Gas Pipelines.—There are many other natural gas pipelines operating in Canada. Many are gathering systems and others are exclusively distribution systems. They constitute important sectors of the country's gas pipeline industry, as is evidenced by their aggregate pipeline mileage. To mention a few, Canadian Montana pipeline gathers gas in the southeastern part of Alberta and transports it southward into the State of Montana; the company also operates a line that purchases gas from Alberta Gas Trunk Lines in the southwestern part of the province. In Saskatchewan, the system of the Saskatchewan Power Corporation has gathering, transmission and distribution systems and delivers all of the gas for sale in Saskatchewan; the Corporation had 4,966 miles of pipeline in operation at the end of 1966. Three other systems have gathering, transmission and distribution systems: in Alberta, Canadian Western Natural Gas Company Limited operates in the southern portion of Alberta and Northwestern Utilities in the northern area, the combined length of pipe being 5,243 miles; Union Gas operates mainly in southwestern Ontario, picking up gas from some fields that are the oldest in Canada. These and many other systems make up the fast-growing network of gas pipelines in Canada which serves domestic, commercial and industrial customers in all provinces except the Maritimes.

Oil Pipeline Statistics.*—There were 42 oil pipeline companies operating in Canada at the end of 1965. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

Gas Pipeline Statistics.—As already stated, the natural gas transport industry became a significant factor in the Canadian economy in 1957 with the completion of the first of several extensive pipelines constructed to transport natural gas from the field or processing plant to distribution outlets. Consequently, the distribution industry also greatly increased deliveries to consumers from that time. Tables 3 and 4 illustrate this expansion for the years 1963-66.

Section 1.—Telecommunications*

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph, radio and television facilities, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country—its size, its topography, its climate, its small population—which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been met is evidenced by the fact that today Canada possesses communication facilities and services which are second to none in the world and which are somewhat unique in structure. On the one hand there is a group of telephone companies acting in concert to provide national services and on the other there are two railway companies providing services, each of which is national in scope. These companies provide a most comprehensive total communications network and almost all Canadians from the Arctic Coast to the 49th parallel and from St. John's in Newfoundland to Vancouver in British Columbia can communicate with each other and with the rest of the world by the simple action of twisting a dial or pushing a button. Messages are carried by microwave, tropospheric scatterwave systems, land lines and high frequency radio bands. The great advance in telecommunications during the past few years indicates that machine-to-machine communications will, within a very short time, surpass the volume of man-to-man communications. The use of computers is becoming more and more commonplace and the ability to transmit computer data from one location to any distant location across the country is a tremendous boon to industry and commerce and a benefit to every Canadian.

Public Telephone Service.—Telephone service, local and long-distance, is provided by telecommunications companies serving a total of 8,000,000 telephones across Canada. The largest serving organization is the Trans-Canada Telephone System comprising eight

* A special article on The Development of Telecommunications in Canada, prepared by M. E. Callin, P. Eng. of the Northern Electric Company Limited, Montreal, appears in the 1967 Year Book, pp. 862-869; the present Section deals with telecommunications in Canada today and was prepared by W. M. Lawson of CN Telecommunications Toronto.

telephone companies, either privately or publicly owned—the Alberta Government Telephones, the British Columbia Telephone Company, the Manitoba Telephone System, the Maritime Telegraph and Telephone Company Limited, the Saskatchewan Government Telephones, the Avalon Telephone Company Limited, the Bell Telephone Company Limited, and the New Brunswick Telephone Company Limited. In addition, there are nearly 2,000 independent telephone companies providing private service in smaller communities across the country, many of which link into the Trans-Canada Telephone System for world-wide telephone access. Each company has a monopoly within its own territory and is subject to government regulations at the appropriate level—federal, provincial or municipal.

CN Telecommunications, the largest single telecommunications system in Canada on the basis of area served, provides telephone service for residents in the Yukon and Northwest Territories, in parts of Newfoundland, and in northern sections of British Columbia and Manitoba. In all, there are some 30,000 subscribers on the CNT telephone network. Without exception, all the CNT exchanges are of the automatic dial type. Subscribers in the Far North have access to the outside world via CNT-operated long-distance toll centres at Whitehorse, Y.T., Fort Nelson, B.C., and Hay River and Inuvik, N.W.T. In some areas, such as the Mackenzie River delta, short-haul long-distance calls are handled by automatic toll ticketing similar to that used by the large telephone companies in the major southern Canadian centres. A recent multi-million-dollar expansion program has brought telephone service to an additional fifty communities in Newfoundland, and many isolated settlements now have as modern a telephone service as any in Canada.

The latest telephone innovation is the electronic exchange and the touch-tone telephone, developed in the United States. The dial is replaced by push-buttons, each of which, when pressed, emits a tone that activates the exchange to contact the desired party. Electronic exchanges are now being used in some areas by the Trans-Canada Telephone System and CN-CP Telecommunications are using a similar touch-tone application in their Broadband Exchange Service (see p. 864).

Public Telegraph Service.—Canada's telegraph systems are operated by CN and CP Telecommunications. These companies operate telegraph offices, often amalgamated, in all ten provinces and in the Yukon and Northwest Territories and messages can be sent to and from any point in Canada or throughout the world via the overseas cable services (see pp. 871-872). At one time, much of the CNT and CPT revenue came from telegraph message traffic but the proportion now accounted for by such traffic is only about 20 p.c. Even so, the reduced telegraph message traffic is handled by the most up-to-date facilities. Messages are transmitted by teleprinter and facsimile equipment, and telegraph networks over which public messages flow are controlled by computers. In other words, messages are taken in and forwarded automatically in accordance with special programs stored in the computer's memory. The computer determines where the message is to be sent and sends it as soon as the circuits are free.

Telex Service.—Telex, by far the largest teletypewriter service in Canada, is provided by CN-CP Telecommunications. Its network of more than 13,500 subscribers in Canada interconnects with the Western Union Telex network in the United States and with European and world-wide networks of at least 250,000 subscribers. Telex is a direct distance dial teleprinter system which permits a subscriber to directly dial any other subscriber on the network. Two speeds are offered to customers—66 words a minute and 100 words a minute—at costs determined on a time-used and distance basis. There is no minimum charge. CN-CP Telecommunications were the first to introduce this dial-and-type service in Canada 11 years ago.

TWX, similar to Telex, is provided by the major Canadian telephone companies. One transmission speed of 100 words a minute is offered on this service, the network of which consists of some 3,000 subscribers in Canada and interconnects with the American Telephone and Telegraph network of 37,000 TWX subscribers and also with the European and world-wide Telex network outside the North American network.

A medium-speed Telex service is offered exclusively by CN-CP Telecommunications, operating in the speed range of up to almost 300 words a minute. The subscriber may own his computer or data sending-receiving equipment or may lease this equipment from CN-CP. This service provides a direct dial interconnection with subscribers anywhere in Canada to achieve a medium-speed range transfer of data from one location to another. The monthly rates to subscribers are the same as the standard-speed Telex service, that is, are based on time-used and distance. A six-level code, an eight-level code, and punched computer cards can operate on the medium-speed service.

Broadband Exchange Service.—In 1967, CN-CP Telecommunications introduced an automatic switching system of the most advanced design, known as Broadband Exchange Service, which has moved Canada into a new era of extremely high quality and very rapid communications. It is the first such system to operate in Canada and the second in the world. Broadband has more than tripled the fastest conventional machine-to-machine transmission. Furthermore, it has the capability, upon customer demand, of transmitting computer data at 51,000 words a minute, or more than 50 times faster than the top speed reached by conventional switched networks. The Royal Canadian Mounted Police was the first organization to be tied into this supersonic network, using it for intricate and high-quality transmission of fingerprints, photographs and documents between headquarters at Ottawa and divisional headquarters at Montreal, Toronto, Winnipeg, Edmonton, Regina and Vancouver. In 1968 the network will be extended westward to Victoria and eastward to Fredericton, Halifax and St. John's and, when installation is complete, the facsimile network will embrace an area of over 3,000 miles, probably the longest network of its kind in the world.

Its name, Broadband Exchange Service, is derived from the actual system since subscribers eventually will be able to select various bandwidths, depending upon their communications needs. The broader the bandwidth, the higher the quality and the

An RCMP communications officer receiving a facsimile of a set of fingerprints and photographs through CNT's supersonic network called Broadband Exchange Service, an automatic, switching system of the most advanced design.

faster the speed of transmission. CN-CP will offer three bandwidths: four kilocycles for voice, facsimile and data (from 1,000 to 3,000 words a minute); 16 kilocycles for high fidelity radio program transmission and facsimile; and 48 kilocycles for high-speed computer-to-computer data exchange (51,000 words a minute) and high-speed facsimile (35 seconds). The four-kilocycle bandwidth is now operational and the 16-kilocycle and 48-kilocycle bandwidths will become available with customer demand.

The initial system consists of four main switching exchanges located at Montreal, Toronto, Winnipeg and Vancouver. Concentrators or, more aptly, 'links' to ten communities surrounding these four main centres lead into the main exchanges to connect other communities to the network. Broadband uses the most advanced techniques known to ensure error-free data transmission. The exchanges are entirely electronic, using dry reeds and without moving parts. Present-day exchange centres, including telephone exchanges, use electro-mechanical switching equipment which can occasionally cause disturbances and errors while transmitting computer data. Without mechanical equipment in the Broadband exchanges, transmission disturbance is virtually eliminated. Transmission is carried by the CNT-CPT microwave system using frequency diversity techniques to provide a high degree of reliability. In other words, the transmission is carried twice both ways over different circuits at the same time, one being a back-up system for the other.

Each subscriber has in his office a voice-data subset—a most advanced telephone instrument which, with a flick of a button, can change from voice communication to transmission of computer data. The subset features push-button 'dialing' and the customer, to reach a distant point, simply pushes the buttons in a series of seven digits. The first three digits pressed designate the distant exchange, the fourth digit indicates the desired bandwidth and the last three digits are for the line of the desired party. A re-ring button is included so that the customer may signal the distant party to revert to voice communication during or after sending computer data. A feature of Broadband is abbreviated keying, where customers may contact frequently called stations by pushing a two-digit code instead of the normal seven. Broadband will make distant connections, including keying time, within five seconds, or two seconds on the special 'hot line' service. Actual connection time after keying or 'dialing' is less than two seconds. Another feature of Broadband is conference calling, where a subscriber, by pushing a two-digit code, will automatically contact a pre-determined list of parties needed for the conference. Subscribers are charged on a 'pay-as-you-use' basis.

Data-Phone Service.—The major Canadian telephone systems operate Data-Phone service which transmits data from punched cards, tape or magnetic tape between two or more machines or computers. It takes pulses from punched cards or tape-data machines and transforms them into tones which are sent over telephone circuits or leased private lines. The subscriber pays for the line while being used at regular long-distance rates. Data-Phone transmits at a speed of 1,200 bits a second or 1,000 words a minute.

Wide Area Telephone Service.—Wide Area Telephone Service (WATS), operated by the Trans-Canada Telephone System, provides dial-type telephone communications from one WATS zone directly to another long-distance zone. In other words, the subscriber has a wider area that he may call directly without going through the long-distance operator or Direct Distance Dialing, and he may select any or all of the WATS ones he wishes. The customer has an access line to a dial exchange office for use only in originating WATS calls. He is charged on a measured time-period rate and an additional hourly rate. The measured time-period is ten hours of accumulated time in each month and the additional hourly rate applies to the time used above the measured time.

Master control board of the computer-controlled transmission system at CNT's Data Central, Toronto, the present major function of which is the handling of airline and railway reservations. The network is also used by the Meteorological Branch of the Department of Transport to transmit weather maps across the country for instant weather information.

Computer-Controlled Transmission Systems.—CN Telecommunications operates the only computer-controlled system in Canada, although The Bell Telephone Company of Canada is planning to install such systems. CNT's Data Central in Toronto was inaugurated in 1964. It controls and transmits information for the reservations systems for Air Canada, Canadian Pacific Air Lines and Canadian National Railways. When an airline customer wishes to make reservations, a computer card is inserted into a card reader. Within three seconds the card will pop up with the reservations or, if there is no space on a particular flight, give alternate flight routes. The operation of the CNR reservation system is basically similar. CNT Data Central also handles Air Canada's 'Notice to Airmen' (NOTAM) project where particular flight plans, runway conditions and navigational aids are stored in Air Canada's computer and given out to pilots across the country where a special code is dialed on teletyp machines.

A third-generation computer installed at the Data Central in early 1967 is performing major 'store and forward' message switching function for the Meteorological Branch of the Department of Transport. Once the computer finds a weather report from any one of the 171 DOT weather stations across the country, it tells the station equipment to transmit the report to Data Central and the determines where and at what time of the day the information is to be sent.

Satellite Communications.

Increasing activity in the Canadian Arctic and sub-Arctic, where communities are being expanded and new ones formed, has prompted the telecommunications industry to consider a domestic satellite system that would suit the communications needs of the North as well as those of the other parts of Canada and for some time this subject has been under intensive study.

the Department of Transport. In 1966 two proposals for a Canadian domestic satellite system—one by a private broadcaster and space electronics company and the other by the Trans-Canada Telephone System and CN-CP Telecommunications—were put before the Federal Government. Both proposals were based on recent forecasts of the telecommunications needs of all of Canada with particular attention to the Far North and both suggested that Canada act as soon as possible before the limited number of good orbital positions were lost by default to other countries. The whole of Canada is visible in space only from that part of the equatorial orbital plane lying between 96° and 116° West Longitude. This forms a 20-degree arc and contains the satellite positions most desirable for Canadian domestic service.

The proposal made by the Trans-Canada Telephone System and CN-CP Telecommunications calls for a three-pronged program for full coverage of Canada by 1970 which would be achieved with a Canadian-owned and -operated space system to be fully integrated with the nation's existing telecommunications network and would cost approximately \$80,000,000. The system would carry television, telephone calls, data and other telecommunications services and would involve the construction and equipping of 54 earth stations, the purchase of three communications satellites and the launching of two of them into stationary orbit at an altitude of 22,300 miles. The stationary orbit and altitude of the satellites means that they would rotate with the earth every 24 hours and therefore at any particular time of the day be over the same spot on earth. The system would have three satellites—two in orbit with one active and the other as standby, and one ready in reserve for launching. Each satellite would be capable of 12 operating channels and each channel would carry either one television program or 1,200 voice circuits. Of these channels, three would be allocated to telephone calls and other message types of service and the remainder would be available to expand national television coverage of all types. The basic network of the 54 earth stations would include: six heavy-route transmit-receive stations; nine network receive-only; one remote area transmit-receive; and 38 remote area television receive-only. Bell Canada, one of the sponsors of the proposal, began to implement plans in 1966 by building an experimental earth station at Bouchette near Ottawa, which could serve as a key element in a common carrier system to bring television to the Far North via satellite.

Basically, satellite communications is just one long microwave link. The clarity and strength of transmission provided by such a satellite would be comparable with that of existing microwave systems; only with respect to time required for transmission from an originating earth station to a satellite and back to another receiving earth station would there be a noticeable difference. Because of the 22,300-mile altitude of the satellite, the two-way transit time would be about 600 milli-seconds or six tenths of a second. This delay would be of no concern for one-way transmission services such as television, but must be taken into account in the case of two-way voice circuits. To minimize the time effects, the proposal calls for the avoidance of tandem connections on space facilities and, wherever possible, the operation of voice circuits with one direction via satellite and the other via ground facilities.

By 1975 the first generation of communications satellite would be nearing the end of its life cycle and undoubtedly additional satellite capacity would be required by then. The scope, capacity and design of the second generation of Canadian satellite would depend on technical developments and traffic requirements during the intervening years. Canada's microwave, land-line and troposcatter systems will continue to be the backbone of telecommunications services for many years to come but satellite communications, properly integrated with land facilities, will make it possible to reach all areas to which service has not yet been economically feasible.

Subsection 1.—Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Parliament are subject to the jurisdiction of the Canadian Transport Commission in the matter of rates and practices under the provisions of the Railway Act (see pp. 792-793); other companies are responsible to provincial regulatory bodies. International telegraph and telephone communications are handled subject to the International Telecommunication Convention and the Regulations thereunder and/or under regional agreements. Tolls charged to the public for radio communication service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Radio communications in Canada, except for those matters covered by the Broadcasting Act, are regulated under the Radio Act and Regulations and also under the Canada Shipping Act and Ship Station Radio Regulations. In addition, radio communication matters are administered in accordance with the International Telecommunication Convention and Radio Regulations annexed thereto; the International Civil Aviation Convention; the International Convention for the Safety of Life at Sea; the Inter-American Telecommunication Convention and the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and also in accordance with such regional agreements as the Agreement between Canada and the United States for the Promotion of Safety on the Great Lakes by Means of Radio, the Agreement between Canada and the United States relating to the Co-ordination and Use of Radio Frequencies Above Thirty Megacycles per Second, the Inter-American Radio Agreement, the North American Regional Broadcasting Agreement, the Canada-USA Television Agreement and the Canada-USA FM Agreement (see also p. 873).

National radio broadcasting in Canada came under Government regulation in 1932 when the Canadian Radio Broadcasting Commission was established under the Canadian Radio Broadcasting Act. In 1936 the Canadian Broadcasting Act was passed, replacing the Commission by the Canadian Broadcasting Corporation to which it gave wide powers in the operation of a national broadcasting system and gave to the Minister of Transport the technical control of all broadcasting stations. In 1958, the Government established a Board of Broadcast Governors which had the function of regulating the establishment and operation of networks of radio and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. On Feb. 7, 1968, legislation was passed by the House of Commons implementing a new broadcasting policy for Canada and amending the Radio Act. For details, see pp. 878-879.

Subsection 2.—Telephone and Telegraph Statistics

Telephone Statistics.—In 1966 there were 2,310 telephone systems operating in Canada compared with 2,374 in 1965; of these systems, 2,127 reported in 1966 and 2,330 in 1965. Co-operative systems in rural districts decreased in number from 2,072 to 1,900 in the same comparison and incorporated companies from 157 to 134. The largest of the incorporated companies, The Bell Telephone Company of Canada, which operates throughout the greater part of Ontario and Quebec and in Newfoundland and the Northwest Territories, served 62 p.c. of all the telephones in Canada in both years and the British Columbia Telephone Company, also shareholder-owned, served 9.7 p.c. of the total in 1966. The number of telephones in use continues to increase at the rate of about 6 p.c. annually.

1.—Pole-Line and Wire Mileage and Number of Telephones in Use, 1957-66

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Systems Reporting	Route Mileage	Length of Wire	Telephones in Use			
				Business	Residential	Total	Per 100 Population
	No.	miles	miles	No.	No.	No.	No.

The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems.

3.—Local and Long-Distance Calls and Average Calls per Capita and per Telephone, 1957-66

NOTE.—Figures from 1928 will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

Telegraph Statistics.—There were nine telegraph and cable companies operating in Canada during 1966 but, as already stated, telegraph service is provided mainly by the telecommunications departments of the two major railway companies (see also p. 863). The number of telegrams sent continues to decline year by year, giving way to other types of message transmission, but the number of cablegrams sent has been rising. The business of telegraph and cable companies appears to be changing from one of handling messages directly to one of leasing equipment for the transmission of messages by others. Revenues from the latter source have been rising over the past several years and have been the main factor in the steady advance in total operating revenues. Total cost of property and equipment for all telegraph and cable companies was \$474,826,188 in 1966, increasing from \$447,295,483 in 1965.

6.—Summary Statistics of Canadian Telegraphs, 1957-66

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

¹ Excludes commission operators.

² Includes wireless messages and transatlantic telex messages.

Subsection 3.—Overseas Telecommunications Services

The Canadian Overseas Telecommunication Corporation was established in 1950 to maintain and operate external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and overseas points; to make use of all developments in cable and radio transmission and reception for external telecommunication services; and to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other nations.

By 1967 the following services had been established: direct telegraph, telephone and telex communications between Canada and Argentina, Australia, Barbados, Bermuda, Brazil, Britain, Denmark, Finland, France, Germany, Iceland, Italy, Jamaica, Japan, the Netherlands, New Zealand, Norway, Sweden and Switzerland. Direct telegraph and telex services are operated with Belgium and Peru, direct telegraph service with the Soviet Union and direct telephone and telegraph services with the islands of St. Pierre and Miquelon in the Gulf of St. Lawrence.

The first transatlantic telephone cable, a joint project with the British Post Office, the American Telephone and Telegraph Company, the Eastern Telephone and Telegraph Company and the Corporation, was brought into service in 1956. Apart from normal use of its systems for public telephone and telegraph message traffic, capacity is available for private leased circuits. International telex service was introduced to Canada the same year and service with 133 countries is available. Since 1961 the following cables have

been brought into service: the Canada-Britain 80-circuit telephone cable (CANTAT); the Canada-Greenland-Iceland 24-circuit cable (ICECAN), primarily intended to meet the North Atlantic communication needs of international civil aviation, and its connecting counterpart between Iceland and Scotland (SCOTICE); the Commonwealth Trans-Pacific 80-circuit cable, a four-party enterprise between Canada-Britain-Australia-New Zealand (COMPAC) and part of the round-the-world Commonwealth telephone cable system; the South East Asia Commonwealth 80-circuit cable (a six-party enterprise between Australia-New Guinea-North Borneo-Singapore-Malaya-Hong Kong (SEA-COM), connecting with COMPAC to form a further link; and the use of a number of circuits for Canadian purposes in telephone cable systems connecting Bermuda and the United States and Jamaica and the United States.

The Corporation also operates direct circuits via satellite with Britain, France, Italy, Germany, Switzerland and the Netherlands. The earth station constructed for the Department of Transport at Mill Village, N.S., for research and experimentation, has been brought into service for commercial use and, pending the introduction of suitable multiple-access capability in the satellites, now alternates on a schedule basis with the American station at Andover, Maine, in handling all North American-European traffic routed via satellite. The Corporation's own earth station for commercial purposes is under construction and when completed the present station will revert to its original purpose but will also serve as a standby for commercial operations. Canada, represented by Canadian Overseas Telecommunication Corporation, is a member of the Interim Communications Satellite Committee (ICSC) set up by the participating nations for the development and operation of a global communications satellite system.

The Corporation, under a long-term agreement, has under charter from the Department of Transport the CCGS *John Cabot*, a combined ice-breaker/cable-repair ship, used mainly for repairing the cables in the western North Atlantic Ocean. The Corporation also operates a cable depot at St. John's, Nfld.

¹ Twin cable from Clarenville, Nfld. to Oban, Scotland, and single cable from Clarenville, Nfld. via Terrenceville, Nfld. to Sydney Mines, N.S.

² Licensed for operation by two carriers—COTC and ET&T.

Increased demand for all types of overseas telecommunication services resulted in the COTC reporting a net profit of over \$3,500,000 for the year ended Mar. 31, 1967. Income for the year amounted to \$21,212,533.

Subsection 4.—Federal Government Civil Telecommunications and Electronics Services

Telecommunications policy, planning and operations under the jurisdiction of the Department of Transport are administered by the Government Telecommunications Policy and Administration Bureau and the Telecommunications and Electronics Branch. The functions and responsibilities of the Bureau may be summarized as: (1) development of policy and plans with respect to national and international telecommunications by satellites, cables and other media including relations with the Canadian Overseas Telecommunication Corporation, and participation in the work of the International Telecommunication Union and its subsidiary organs; (2) forward planning for the development of economical and effective telecommunications facilities to meet the administrative and general needs of Federal Government departments and agencies throughout Canada, compatible with the improvement of public services, and to arrange for these facilities; (3) planning of emergency measures and administration of the Emergency National Telecommunication Organization (ENTO); (4) development and maintenance within the Bureau of a centre of competence in the latest telecommunications technology; and (5) administration of the Radio Act and Regulations including allocation and assignment of radio frequencies, radio provisions of the Canada Shipping Act, Ship Station Radio Regulations, the Telegraph Act and the Regulations thereunder covering the licensing of overseas submarine cables. The Branch is responsible for: (1) research into and development of new and improved communication and electronic equipment and systems in support of aeronautical, marine, meteorological and other services; (2) construction, maintenance and operation of radio aids to marine and air navigation and of radio communication stations including procurement of the necessary equipment; and (3) administration of the leasing of land-line telecommunication circuits, equipment and related facilities for all services of the Department.

Licensing and Regulation of Radio Stations.—Under the Radio Act and the Canada Shipping Act it is provided that radio stations employing a form of Hertzian wave transmission, including television and radar, be licensed by the Department of Transport unless otherwise exempted by regulation. Licensing, which provides basic control over the right to establish a radio station, involves the assigning of specific frequencies to each station. Frequencies are assigned to many types of services on a shared non-interference basis. Engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and, before a new broadcasting station can be licensed or before modifications can be made to an existing station, notification is sent to the signatory countries of the North American Regional Broadcasting Agreement, in the case of AM broadcasting stations, and to the United States under the Canada-USA Television Agreement and the Canada-USA FM Agreement, for television and FM broadcasting stations, respectively. The setting of standards for the equipment, installation and operation of a station provides control for efficient use of the radio spectrum. A further control is the requirement that operating personnel be subject to examination and certification.

From time to time, the Department of Transport establishes standards governing the technical suitability of radio equipment for licensing in Canada. These standards, which are called Radio Standards Specifications and Standard Radio System Plans, are issued by the Department in co-ordination with representatives of industry. Before a licence may be issued, the radio equipment to be used must comply with the technical requirements of the applicable Radio Standards Specification, in which case they will be listed in the Radio Equipment List as type-approved or technically acceptable. Briefs supporting a request for technical appraisal of a radio apparatus may be prepared and submitted by a fully qualified engineer or the necessary tests may be conducted, for a fee, at the Depart-

ment of Transport Radio Regulations Engineering Laboratory, Ottawa. Over 2,000 units were listed as type-approved or technically acceptable during the year ended Mar. 31, 1967.

Ten fixed and two mobile monitoring stations are maintained at suitable points across Canada to observe actual radio spectrum conditions using a variety of modern electronic aids, their purpose being to ensure that radio communications are conducted according to regulatory procedures and to determine causes of harmful interference.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that meets the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. All Canadian and foreign ships are subject to inspection to ensure that they conform to the requirements of the Safety of Life at Sea Convention.

Standards have been developed for the installation of aircraft radio stations specifying the techniques and materials that may be used, and inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. In-flight inspections of the radio communications and navigational aspects of proposed new air-carrier operations, encompassing both land and oceanic routes, are made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile radio stations and the regulations made under the Radio Act provide for the examination and certification of operators both professional and amateur.

Number of Radio Stations Licensed in Canada.—The number of licences in force for radio stations in Canada during the year ended Mar. 31, 1967, was 191,849 compared with 162,840 in 1965-66. These figures include stations operated by federal, provincial and municipal government departments, stations on ships and aircraft registered in Canada and mobile stations operated in public and private land mobile services but do not include private commercial broadcasting licences.

General radio service licences in force ¹	41,534	50,859
General radio service licences issued during year (new or renewed).....	19,001	20,250
Tourist radio service licences.....	4,705	7,126
Total licences in force.....	162,840	191,849
Certificates of Registration issued to U.S. licensees.....	2,322	2,442
Net increase in licences in force over preceding year.....	25,928	29,009

¹ General radio service licences are valid for a three-year period.

Investigation and Suppression of Radio Interference.—The Radio Act provides penalties for selling or using apparatus liable to cause interference to radio reception. Standards are developed and approvals for exemption from licensing issued for certain classes of each equipment. The Department of Transport also provides a country-wide interference service using special investigation equipment for the purpose of tracing source of interference and recommending cures for interference to broadcast, television and other radio reception. Eighty-one cars equipped for measuring and locating source of interference operate from offices located in 35 cities throughout Canada.

Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order and Radio Noise Limits Order Amendment. This amendment, introduced on Sept. 24, 1964, designates the limits for noise from

television receivers manufactured in Canada or imported into Canada on or after Apr. 1, 1966 (amended to Apr. 1, 1972 on July 26, 1967). Certain low-powered radio transmitting and receiving equipment, such as garage door controls, may be exempted from licensing under Section 5 of the Radio Act. When a particular model has been exempted, it may be operated without the radio station licence.

Meteorological Communications.—Weather stations operated by the Meteorological Branch of the federal Department of Transport throughout Canada are linked coast-to-coast by means of teletype and, in the remote northern areas, by radio or radioteletype. The land-line teletype circuits are leased from commercial companies and the radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the Department of Transport.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial telegraph or radio facilities to the nearest station on the teletype line for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-to-coast teletype systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax, Gander and Goose Bay. These centres handle the distribution of weather information within Canada, including the Arctic, and also effect international exchange with the United States and Europe and, through them, with many other countries. Altogether, the Meteorological Branch uses 59,100 miles of teletype circuits, connecting 390 teletype offices.

In addition, a facsimile network connects weather offices and includes radio facsimile transmission to Arctic stations and ships at sea. Weather charts originating at the Central Analysis Office and the High Level Forecast Office in Montreal receive national distribution over the network. Charts prepared at the various Weather Central Offices across Canada are transmitted regionally. Altogether, the Meteorological Branch utilizes 15,900 miles of facsimile circuits, serving 95 offices.

Radio Aids to Marine and Aeronautical Navigation.—Services of the Telecommunications and Electronics Branch of the Department of Transport in aid of marine and aeronautical navigation are outlined in the following paragraphs; details may be obtained on request from the Department of Transport, Ottawa.

Marine Navigation.—Radio aids to marine navigation are provided for radio-equipped Canadian vessels and foreign ships using Canadian waters. This safety and communications service for shipping covers the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait and includes regularly broadcast weather reports, storm warnings and notices of dangers to navigation. Ships at sea may obtain medical advice from any coast station. The stations carry out communications by radiotelegraph and/or radiotelephone and most of them provide connections to land telephone lines. Halifax (VCS) and Vancouver (VAI) stations provide a long-range radiotelephone service to ships. Halifax (VCS) and Vancouver (CKN) have radiotelegraph facilities for world-wide communications and participate in the Commonwealth long-range ship communications scheme. Coast stations on Hudson Bay and Hudson Strait, in addition to their regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions, etc.

Automatic radiobeacon stations are maintained on the East and West Coasts, the St. Lawrence River and Gulf, the Great Lakes and Hudson Bay and Strait, giving navigational aid to mariners by transmitting signals on which bearings may be taken. These stations are arranged, where possible, in groups up to a maximum of six stations transmitting in sequence on a common frequency, the sequence being repeated continually regardless of weather conditions.

Loran is a long-range radio aid to marine and air navigation providing accurate fixes at distances up to 750 miles by day and 1,500 miles by night. Two *Loran* stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with *Loran* stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans. *Decca* is a short-range radio aid to navigation providing accurate fixes at distances up to 250 miles. Four chains of *Decca* stations are in operation—the Newfoundland chain, the Nova Scotia chain, the Anticosti chain and the Cabot Strait chain—giving service to ships off Newfoundland and Nova Scotia and in the St. Lawrence River and Gulf.

It has become general practice to equip merchant ships with radar and important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation—one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour. Low-powered transceivers are provided for use in emergencies at lighthouses, particularly at locations that would otherwise be completely cut off from assistance in case of illness.

*Aeronautical Navigation.**—Radio aids to air navigation are provided from coast to coast and from the Canada-United States border to the Arctic along and off the airways, and are used by Canadian and foreign air carriers flying over Canadian territory. Six regional offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., carry out the construction and operation of facilities. Low-frequency radio range stations, located approximately every hundred miles along airways, provide specific track guidance to pilots by means of audible signals which may also be used to obtain direction finding bearings. In addition, radiotelephone communications are available between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights. Fifty very high frequency omni-directional ranges (VOR) are in operation, a type of facility that enables the pilot to select any desired course. These omni-directional ranges have permitted the establishment of VOR airways across Canada and on a number of trans-border routes in co-operation with the United States. Additional installations are under construction.

Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. Fan markers operating on very high frequencies are usually placed on an airway to inform the pilot when he may safely lose altitude or to indicate accurately the distance from an airport. Station location markers, similar to fan markers, are installed at most radio range sites; they enable a pilot to determine when he is exactly over the station.

Airport and airway surveillance radars (150 nautical-mile) are in operation at 16 airports for air traffic control purposes. Precision approach radars are in operation at seven major airports. Instrument landing systems (ILS) provide radio signals which permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. Forty-five instrument landing systems are in operation.

Aeronautical radio communications stations are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication with domestic and international air carriers. Thirteen international communications stations, giving coverage from coast to coast and over the oceans, form a major contribution on the part of Canada to international aviation.

* See also the item on Air Traffic Control, pp. 850-851.

Subsection 5.—Public and Private Commercial Microwave Facilities

Canada, because of its population distribution and the vast areas served by microwave communication links, ranks second highest among the world's users of microwave communications systems on a per capita/per mile basis. Increasing demand for television outlets necessitated the extension of microwave routes to provide interconnections for the CBC English and French and private networks and recently these routes have been upgraded to enable the transmission of colour television which started in the autumn of 1966. With the use of more automated equipment by industry and various services, associated data and control information must be transmitted at rapid speeds over microwave radio-relay to widespread areas throughout the country. This Subsection gives a summary of the facilities existing or under construction at the end of March 1967.

Railways.—The Telecommunications Departments of the Canadian National and Canadian Pacific Railway Companies have placed in operation a microwave system extending from Montreal to the Pacific Coast, which is used for television, telephone and data relay purposes. They also operate microwave facilities linking the Province of Quebec with the Maritime Provinces and Newfoundland and a major expansion of microwave facilities in Newfoundland has been undertaken by Canadian National Telecommunications (CNT). In addition, CNT has installed a microwave system between Alberta and the Yukon Territory which carries telephone and data traffic and serves both civil and military organizations in the area. In co-operation with Alberta Government Telephones, a combination microwave and tropospheric scatter system connects Alberta and the Northwest Territories. This system is also intended to provide communication for civil and military use in the Far North. The Quebec North Shore Labrador Railways has developed a microwave system extending into northern Quebec to provide communication for mining operations and to serve some civil communication purposes. Ontario Northland Railways operates a microwave installation connecting northern Ontario and James Bay, also for purposes of military and civil communication. The Pacific and Great Eastern Railway makes extensive use of 6,000 Mc/s microwave facilities linking Vancouver with Prince George and Dawson Creek, B.C.

Telephones.—The Trans-Canada Telephone System consists of eight provincial and private systems collectively providing a transcontinental microwave system for the purpose of carrying telephone, television, data and other types of communication services. Extensive microwave systems are utilized within the respective provinces for civil and military communications or television relay purposes. Major expansion has taken place in each province, greatly increasing the number of areas served and system capacity for all types of communication requirements. Tropospheric scatter systems are employed to provide beyond line-of-sight transmissions especially to the Far North; these are used for both civil and military applications.

The telephone companies of the three Prairie Provinces plan to construct a major microwave system extending from Winnipeg to Edmonton, to form part of a projected second transcontinental microwave system operated by the telephone companies. The British Columbia Telephone Company has installed a major trunk system from Prince Rupert to Prince George, which is linked through Prince George with the transcontinental system in the southern part of the province. A microwave system has been built linking Mill Village communication satellite earth station, near Liverpool, N.S. (see p. 872), with the trunk route system of Maritime Telegraph and Telephone Company.

Television.—The two main television interests in Canada—the CBC (now CRTC) and the CTV Television Network Limited—lease private microwave facilities for the relay of television programs from coast to coast. In addition, studio transmitter links are used by various television stations where the television transmitter is situated some distance from the studio and interconnection is required. In sparsely populated areas, off-the-air pick-up signals from primary television stations are sometimes relayed via microwave to rebroad-

casting sites. Microwave facilities are also used in connection with portable and mobile television pick-up where program material is intended for the main studio. Recently, both network facilities and local studio transmitter links have been up-graded to enable the transmission of colour television.

Industrial.—Although many firms utilize public communication facilities on a lease basis, some organizations have installed private microwave systems to provide voice, teletype and control data for various purposes. The British Columbia Hydro and Power Authority, the Calgary Power Corporation, The Hydro-Electric Power Commission of Ontario, the Quebec Hydro-Electric Commission and Manitoba Hydro use a considerable number of microwave relay systems for important control and communication purposes. For example, Hydro-Quebec has recently greatly expanded its hydro power-generating capacity and new microwave routes have been added to permit a central control of the various generating stations. The British Columbia Hydro and Power Authority is installing facilities to link the Vancouver area with Peace River, Mica Creek and the Bonneville Power Administration in the State of Washington, and also for system control in the Vancouver area.

Instructional.—The Department of Transport has opened the 2,600 MHz. microwave band for use by the various educational authorities in Canada for an Instructional TV system. A number of systems are being developed.

Subsection 6.—Miscellaneous Radio Communication Services

In addition to radio communication services provided by the Federal Government, extensive radio communication systems have been established in the provinces, mainly for police, highway and forestry protection purposes. Municipal government departments have steadily increased their use of radio to facilitate operations, particularly as a medium of communication with vehicles—police, fire, engineering, hydro, etc. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation veterinarian and rural medical also make extensive use of radio for communication purposes.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded considerably their use of radio in both mobile and point-to-point radio fields.

The telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Restricted common-carrier mobile radio service (this service does not permit interconnection with the over-all telephone system but only with specific dispatchers) is available in most major cities in Canada as well as in a number of smaller urban centres. The latter service is provided by telephone companies as well as by other organizations. Low-power radio stations may be licensed to permit short-distance personal and private business radiotelephone communications; more than 50,000 licences were in force on Mar. 31, 1967.

Subsection 7.—Radio and Television Broadcasting*

Broadcasting in Canada has developed over a period of some 48 years as a combination of public and private enterprise. Since the opening program from the first radio station was beamed into a few Montreal homes in 1918, the role of the radio and television program in the daily life of the Canadian family has grown to startling prominence. Today, radio service reaches 99 p.c. and television service over 96 p.c. of the Canadian population.

* Textual material was prepared from information supplied by the Secretary of the Board of Broadcast Governors, Ottawa, shortly after the passage of the Broadcasting Act, 1968, and before its implementation. The statistical data were prepared by the Transportation Division of the Dominion Bureau of Statistics.

To have become such an integral force in the daily life of the nation, broadcasting had to learn the needs of the people and how to serve them. Two 'official' languages forming two distinct cultures had to be served independently but without diminishing the concept of national unity. Dozens of other smaller groups, distinct in culture and frequently dwelling in the same radio or TV coverage area but in separate communities with widely divergent program interests, had to be served. Physical problems of distance and geography had to be overcome. It requires some hundreds of radio transmitters and TV stations and satellites to reach a population distributed across a 4,000-mile southern frontier, through seven time zones and a variety of topographical and climatic regions, and scattered northwest through thousands of square miles to the shores of the Arctic Ocean. Not only do these people have local service that is a reflection of life in their own districts, but by means of thousands of miles of land-lines for radio networks and microwave circuits for television nearly every Canadian may, at the same time, listen or watch as an event of national interest takes place.

In 1932, a publicly owned body, later known as the Canadian Broadcasting Corporation, was created to develop a national service and worked with the private or independent station-owner to establish this service. In 1958, the Board of Broadcast Governors was established, the function of which was to "regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them, and provide for the final determination of all matters and questions in relation thereto". The Canadian Broadcasting Corporation consisted of a president and a vice-president and nine other directors appointed by the Governor in Council. It was accountable to Parliament through a Cabinet Minister designated by the Governor in Council and was empowered to establish and maintain program networks and stations. The Board of Broadcast Governors consisted of three full-time members including the chairman and vice-chairman and 12 part-time members and reported to Parliament through a Cabinet Minister. Licensing regulations under the Broadcasting Act of 1932 are outlined briefly in the 1967 Year Book, pp. 881-882.

In 1966, the Government published a White Paper on Broadcasting proposing amending legislation with respect to the administration and regulation of broadcasting. As a result of these proposals, a new Broadcasting Act was passed by Parliament on Feb. 7, 1968 (SC 1967-68, c. 25) establishing the Canadian Radio-Television Commission (CRTC), consisting of five full-time members and ten part-time members, all appointed by the Governor in Council; recruitment and appointment of the officers and employees of the CRTC is the responsibility of the Public Service Commission. The Act states that there shall be an Executive Committee of the Commission, consisting of the five full-time members, which will exercise the powers conferred on it by the Act and submit to each meeting of the Commission minutes of its proceedings since the last preceding meeting of the Commission.

Subject to the provisions of the Broadcasting Act and the Radio Act and any directions issued from time to time by the Governor in Council under the authority of the Broadcasting Act, the Commission regulates and supervises all aspects of the Canadian broadcasting system with a view to implementing the policy enunciated in Section 2 of the Act. The Commission is the licensing authority for the Canadian broadcasting system. The Minister of Transport is responsible for the regulation and control of all technical matters relating to the planning for and the construction of broadcasting facilities but CRTC is responsible for all other matters.

An applicant for licence to establish and operate an AM, FM or TV broadcasting station, a community antenna television system, or a network files completed application forms with the Secretary of the CRTC. If found to be reasonably complete and technically acceptable, the application is accepted by the Commission and a public notice is issued in the *Canada Gazette* and in one or more newspapers of general circulation within the area normally served or to be served by such a station or system. The same procedure applies to an application for the issue of a renewal licence or the amendment of an existing licence.

Broadcasting Facilities.—As of Feb. 29, 1968, the following numbers of broadcasting stations were in operation in Canada:—

	<i>CBC</i>	<i>Private</i>	<i>Total</i>
AM stations.....	31	265	296
FM stations.....	8	68	76
TV stations.....	75	229	304
Short-wave stations.....	16	6	22
Low-power relay transmitters.....	181	—	181

All but 39 of the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over networks operated by the CBC. Of the unaffiliated private television stations, 11 form the CTV Television Network Limited; the others are independent of network affiliation.

Operations of the Canadian Broadcasting Corporation, 1966-67

In the year ended Mar. 31, 1967, the CBC produced more radio and television programs than ever before, some of them viewed by up to 4,000,000 Canadians on the English network and by up to 2,000,000 on the French network. In addition, some 27 countries, including Britain, the United States, France and Japan, broadcast more than 40 CBC domestic productions, which they either bought or exchanged. Seventeen festival competitions, 14 of them non-Canadian, recognized the merit of CBC radio and television programs. This extensive programming took place while the CBC was converting its television networks to colour, preparing its major Centennial programming, building a \$10,000,000 broadcasting complex to permit the nations of the world to cover Expo 67, and carrying on a long list of more normal engineering and technical projects.

The CBC began to plan its Centennial programming in mid-1964 when the planning group began a long list of national and local events from which those for coverage were selected. By Mar. 31, 1967, Centennial program production already totalled more than 120 hours on television and 260 hours on radio. Training and travelling schedules had to be co-ordinated, including a technical training school in Montreal for highly mobile radio and television teams (the latter using specially constructed two-camera colour packages), a training school in Toronto for commentators, and special training arrangements in other centres. Travel schedules were arranged to cover the 70 to 80 actualities. Hundreds of program ideas flowed between the production points and the planning group, and some programs, such as *Canada '98* and *Canada Express*, went into immediate production.

By Jan. 1, 1967, the International Broadcasting Centre at Expo 67 was operational. It included two colour-capable television studios, six small radio studios, and eight mobile radio and television units for programs originating anywhere on the Expo site. Although the Centre was primarily functional, there was a general broadcasting display on the outer deck and in the corridors and guided tours through a glass-walled catwalk overlooking the studios, control rooms and VTR rooms enabled the public to see programs in production. By March 1967, some 80 radio programs and 48 television programs or inserts had been produced through its facilities and 52 broadcasting organizations from 23 countries outside North America, major and educational networks in the United States and a number of Canadian organizations had made plans to use the facilities.

Television.—As at Mar. 31, 1967, 94.2 p.c. of the estimated 16,120,000 Canadians who speak English only or are bilingual received the CBC's English network coverage by way of CBC stations or privately owned affiliated stations. Of the 6,350,000 who speak French only or are bilingual, 89.1 p.c. received French network coverage by CBC stations or privately owned affiliated stations. The two networks covered over 96 p.c. of the population. Most of those not receiving service were in small scattered communities.

outside the national service coverage area. At Mar. 31, 1967, there were 255 communities of 500 or more population (175 English-speaking and 80 French-speaking) not receiving CBC television at all or not receiving it in the language of the community; community in this context means a concentration of people sufficiently compact to be served by a single TV station. During the year, the CBC and its affiliates extended coverage by way of new network relay or rebroadcasting stations to: Red Rocks, Nfld.; Mont Louis, Causapsca, Mont Georges, Micoua and Outardes, Que.; Hearst and Minden, Ont.; Big River, Sask.; Whitecourt, Athabasca, Banff, Coleman and Bonnyville, Alta.; Chilliwack, Port Alberni, Blue River, Boss Mountain, Spences Bridge, Skaha, Canoe, Midway, Mabel Lake, Olalla, Cawston, Mount Parizeau, Ocean Falls, Houston, Revelstoke and Mica Creek, B.C.

The CBC is experimenting with a new concept of television service, called a Frontier Coverage Package, to provide coverage in remote areas where it is not economical to extend service by normal means. The "package" is a low-power transmitter serviced only by videotape from a selection of programs in the national service and broadcast for four hours each day. This service is first scheduled in English for Yellowknife, N.W.T., and Lynn Lake, Man., and in French for Havre St. Pierre, Que.

Also, the technical feasibility of space satellite transmission opens up new possibilities. For six years, the CBC has kept abreast of satellite developments and gained experience with their use in transatlantic broadcasting. CBC current plans in this area are limited to satellite-to-station transmission, which would enable the CBC to replace surface transmission, at least for its national service, providing costs are acceptable. By this means, it would be technically possible to program the Frontier Coverage stations from the network. Practical satellite-to-home transmission, enabling even isolated individuals in the remote North to pick up a signal, is believed to be still some time away.

Colour came to Canadian television on Sept. 1, 1966. The first phase of the CBC network conversion included installation in Toronto and Montreal of colour production facilities, in Ottawa to allow colour coverage of events of national importance, and at the International Broadcasting Centre at Expo. It also included conversion of network facilities to carry colour, and of the main regional stations to transmit network and certain local film programs in colour. By Mar. 31, 1967, both language networks were carrying up to a maximum of 40 p.c. of their weekly network programming in colour, with additional colour programs seen in local time. Later phases, which await Government approval, provide for facilities at regional production centres to produce as well as carry colour programs. The conversion of network relay and rebroadcasting stations is also involved.

Radio.—The current demand on CBC radio is twofold—first, the need to bring service to the small percentage of the population now beyond the reach of Canadian radio and, secondly, the need to increase the amount of national service programming distributed by the national radio networks. As at Mar. 31, 1967, 98.1 p.c. of the Canadians who speak English only or are bilingual received the English-language service through CBC stations and privately owned affiliated stations and complete radio service in the French language was available to 94.8 p.c. of those who speak French or are bilingual. The two networks together served 98.6 p.c. of the total population. There were 131 communities of 500 or more population (80 English-speaking and 51 French-speaking) not receiving CBC radio or not receiving it in the language of the community.

In radio, an important service is performed by low-power relay transmitters (LPRTs) in the more remote areas of Canada. These are small, unattended radio transmitters to relay radio network service to listeners where reception is inadequate or non-existent and installation of a manned station is impractical. There were 159 LPRTs in operation on Mar. 31, 1967. During the preceding year, radio service was extended by CBC or by affiliates and independent groups associated with affiliates to: Sheet Harbour, N.S.; Minto, N.B.; La Tuque, Chapais, Chibougamau and Gaspé, Que.; Blind River, Donfield, Petawawa, Britt, Espanola and Mindemoya, Ont.; Lynn Lake and Pukatawagan, Man.; Lac La Hache, Chetwynd, Clinton and Mount Timothy, B.C.; and Norman Wells and Pine

Point, N.W.T. An experiment in coverage extension is planned which will serve the Maniwaki area of Quebec where no adequate AM frequencies are yet available. The CBC will install a low-power FM transmitter there which will carry the French-language AM service from Montreal. A similar installation is planned to bring French network service to the Vancouver area.

The CBC operates English-language FM stations in Ottawa, Montreal and Toronto—forming a network—and in Vancouver and Winnipeg, serviced by high fidelity tape and disc exchange. In Montreal, where the CBC has two FM stations, the second offers a local service in French. The CBC FM service emphasizes music but a wide variety of spoken-word material is also used.

The English AM network has moved toward consistent theme programming in the evenings—arts and letters on Tuesdays, regional contributions on Wednesdays, and music on Thursdays; it puts special emphasis on news, has increased its drama productions and has developed a system of more effective balance with the FM schedule. The great flexibility of radio gave an impressive start to Centennial programs. On Dec. 31, 1966, beginning at 7:00 a.m. EST at Wellington, New Zealand, *Salute to Canada* roamed through the world's time zones, finishing at Apia, Western Samoa, at 6:00 a.m. EST on Jan. 1, 1967. This was followed throughout the year by live actualities from across Canada and many specially prepared programs to mark Canada's 100 years. French network programs are more and more designed to show the involvement of radio in the events of the moment. Reacting against the trend to disc, radio has returned to live programs in actualities and documentaries and also in music and light entertainment broadcast direct from the concert hall. The effort by radio to find a contemporary role to television extends to discussions in many fields—sports, religion, art, music and letters, and social problems and topics of interest to French Canadians across Canada.

Regional and Local Programming.—CBC radio and television centres across the country cover local events and problems in news and discussion programs; they offer a means of expression for local writers, actors and musicians, bring in the national service and contribute to the networks, giving a national expression to local voices. The English radio network for many years has carried many of its finest drama, documentary, actuality and musical shows from the regions. For instance, a two-hour period on Wednesday night radio is devoted solely to regional programming under the title *Between Ourselves*. With French-language radio operations now at Chicoutimi, Moncton and Toronto as well as Ottawa, Quebec City and Montreal, the French network is becoming much more responsive to the needs and interests of all French Canada and all points are contributing.

On television, too, the regional centres make important network contributions and, apart from this, the nine English-language TV stations in 1966-67 carried between them some 336 hours of local programming—about 154 hours of film entertainment and 182 hours of mainly local productions of all program types. The French-language stations in Ottawa and Quebec City also produced a number of local programs. Many locally produced programs have a wider appeal and are exchanged among the regions—about 3,000 in 1966-67. This exchange system gives artists, writers and musicians exposure in areas other than their own and reduces the need to buy non-CBC film programs. Exchange programs are widely used by the affiliates and are also available to non-affiliated stations, provided the local CBC station is not scheduling them.

Northern Service.—The objective of the Northern Service is to meet the needs of the people in the North served only by radio by giving them the balance and range of programs heard on the national radio networks prior to television. This is done by enriching the normal national radio schedules with more comedy and entertainment programs. International, national, regional and local news is of first importance. The connection of all northern stations except Frobisher Bay with the national networks and shortwave broadcasts guarantees coverage of international and national events. News editors at Whitehorse and Yellowknife prepare their regional and local news broadcasts

for the Yukon and Mackenzie networks from items gathered by local correspondents throughout their territories, and they contribute news about the North to the national networks "outside".

The Northern Service has been expanding its programs in the local Indian and Eskimo languages. In 1966-67 there were 44 half-hour programs weekly in the two major Eskimo dialects, in addition to news items and other program segments in these languages. CFGB Goose Bay carried a half-hour broadcast and CFFB Frobisher Bay a half-hour "open-line" program in Eskimo. Extensive broadcasts were given in the Eskimo, Indian, English and French languages to acquaint the northern people with the recommendations of the Advisory Committee on Developing Government in the Northwest Territories. A half-hour program devoted to the interests of Indians throughout Canada, which broadcast reports from Indian communities on and off the reservations and from Indian Friendship Centres in the cities, was carried by all Northern Service stations, the northern shortwave service, CBC stations in Windsor and Regina, low-power relay transmitters throughout northern Ontario, and private stations in Campbellton, N.B., Duncan and Kamloops, B.C., and Thompson, Man. The Northern Service co-operated with the Indian-Eskimo Association of Canada in a community development program by broadcasting talks and discussions by people of the Mackenzie River Delta, both Indians and Eskimos. The field workers for this project were members of the Company of Young Canadians who were equipped with tape recorders. A similar program is planned for Yellowknife in 1967-68.

Armed Forces Service.—Through the Armed Forces Service, the CBC provides radio and television programs to the Department of National Defence for broadcasting to Canadian servicemen and their dependants in Europe, Cyprus, the Gaza Strip and Northern Canada and on ships at sea. Recorded radio programs are supplied to broadcasting stations operated by the Armed Forces in Europe, the Middle East and Northern Canada and on ships at sea. News is broadcast by shortwave to Europe and the Middle East as well as by military telephone to Europe. Kinescope and filmed recordings of TV shows are provided to the Department for distribution to remote places where Canadian servicemen are based.

During 1966-67, CBC concert parties took music and comedy entertainment to Goose Bay in Labrador and Inuvik in the Northwest Territories and to the Gaza Strip, Cyprus and Europe. A special round-the-world entertainment tour took Centennial greetings to Canadians serving away from home.

International Service.—Centennial activities and Expo 67 gave the International Service programs a special interest in 1966-67 and the response from listeners by way of cards, letters and reception reports reached a new high of 68,000 compared with 61,000 in the previous year; a steadily increasing number now come from Eastern Europe. The Service broadcasts in 11 languages—English, French, Czech, Slovak, Hungarian, Polish, Portuguese, Spanish, Russian, Ukrainian and German—and the length of programming is from 85 to 90 hours a week. In addition, in 1966-67, transcriptions of music and spoken-word—English, French, German, Spanish and Portuguese—went to broadcasting organizations in several countries. Broadcasts were inaugurated to Africa in English and French via rented transmitter facilities in Britain. Several special projects marked Canada's Centennial, one of which continued a series, begun in 1963, of 52 half-hour programs on Canadian history; this is available in printed form in Canada and abroad in four volumes. In collaboration with RCA Victor Company, 17 discs called *Music and Musicians of Canada* featuring the work of 32 composers in the past 100 years were produced for commercial sale. Also, two world-wide competitions—an essay contest on *Man and His World* and a design contest for a QSL or verification card—brought entries from more than 70 countries; 13 major prize winners were selected to receive expense-paid trips for two to Expo.

In 1966, renovation and improvement of the out-dated transmitting facilities used by the International Service at Sackville, N.B., was begun. Seven 250-kilowatt transmitters will be installed and be operational in 1971 for use by the International Service, the Northern Service and the Armed Forces Service.

Overseas and Foreign Relations.—In addition to the International Service programs which are designed specifically for consumption abroad, the CBC uses domestically produced programs for improving the knowledge of Canada in other countries and for acquainting other peoples with Canadian artists, actors and writers. Some of these programs are sold commercially—in 1966-67 such sales brought some \$220,000—and others are exchanged for productions which contribute greatly to the international flavour of CBC programming. These exchanges are often made through international organizations to which the CBC belongs—the Commonwealth Broadcasting Conference, the European Broadcasting Union, la Communauté des télévisions francophones, la Communauté radio-phonique des programmes de langue française, the Asian Broadcasting Union, and Intertel.

CBC networks are moving into co-production with other countries. The French network, which faces particular difficulties in getting sufficient colour programming other than dubbed American shows, started co-production of a 39-episode colour series, *D'Iberville*, with broadcasting organizations in France, Belgium, Switzerland, Luxembourg and Monaco. It was scheduled on the French network and in Europe for the fall of 1967 and will be seen later on the English network. During the year, broadcasters from 30 countries—22 with major broadcasting systems—were welcomed by the CBC to Canada. Many of them were preparing programs about Canada in its Centennial Year and others came to discuss co-operative projects. The TV Variety-Music Committee of la Communauté des télévisions francophones held its annual meeting at the French network headquarters in Montreal in May. In September, a delegation from the State Committee for Radio and Television of the Soviet Union visited Canada for meetings on Expo broadcasting and for discussions with the CBC on co-operation between the two broadcasting organizations.

Commonwealth Caribbean-Canada Broadcasting.—Following a proposal by Canada's Prime Minister to the Commonwealth Caribbean-Canada Conference in June 1966, the CBC, in co-operation with the governments concerned, undertook studies in preparation for development of a radio broadcasting network, including appropriate production and transmission facilities, to serve the Caribbean Commonwealth countries. The CBC appointed a team to co-ordinate details of the complex undertaking which includes Antigua, the Bahamas, Barbados, British Honduras, Dominica, Grenada, Guyana, Jamaica, Montserrat, St. Kitts-Nevis-Anguilla, St. Lucia, St. Vincent, and Trinidad and Tobago. The first phase of the studies was completed in early 1967.

Finance.—Operating expenses of the CBC for the year ended Mar. 31, 1967 totalled \$154,241,000, an increase of some \$20,800,000 over the previous year. The largest single item of the increase, \$12,345,000, was spent on programs. Parliamentary grants totalled \$112,443,000 of which \$1,411,000 went back to the Receiver-General as repayment of capital loans to the CBC, leaving the net operating funds received from the Federal Government at \$111,032,000. Depreciation, included as an operating cost not recoverable from parliamentary grants, brought the net cost of operations to \$118,045,000. Gross advertising revenue amounted to \$35,153,000 and other revenue to \$1,043,000.

Capital assets, after accumulated depreciation, totalled some \$31,500,000 higher than the previous year's \$82,308,000. Facilities for production and transmission of colour programs and improvements to coverage accounted for the largest portion of the increase.

Operations of Private Broadcasting Stations

Canada's privately owned stations, which are dependent entirely on advertising revenue, provide alternate radio and television service to more than 17,000,000 viewers and listeners. They offer a varied and comprehensive local service to hundreds of communities and many of them are outlets for the CBC network's national service. Although the first private station opened in 1919, legislation recognizing private broadcasting as an integral part of the Canadian scheme came only in 1958. By 1968 there were 250 AM, 56 FM and 57 TV stations, representing a capital investment of \$200,000,000 and transmitting 2,500,000 hours of programming annually. These stations employ about 9,450 persons and pay salaries of close to \$65,000,000, including payments to free-lance talent. Some 95 p.c. of the private stations are members of The Canadian Association of Broadcasters, which has offices in Ottawa, Toronto and Montreal. CAB's Radio Bureau Division produces the non-partisan public service series *Report From Parliament Hill*, featuring talks by Members of Parliament. The Program Exchange Department in Toronto gathers high-quality Canadian and foreign programs and distributes them to interested member stations. Other noteworthy CAB projects include recent five-year sponsorship of the Dominion Drama Festival and the continuing provision of 'in-station' training for students from other countries.

Statistics of the Broadcasting Industry

Financial and other statistics of the radio and television broadcasting industry are obtained by the Dominion Bureau of Statistics in co-operation with the Board of Broadcast Governors and the Department of Transport; summary figures for private and CBC sectors are given in Table 9 for 1964-66.

In 1966, 291 private radio stations and 65 television stations reported to DBS. The operating revenue of the broadcasting industry in 1966 amounted to \$192,380,000, an increase of 12.1 p.c. over the previous year. Of the total, radio broadcasting accounted

for \$81,700,000 or 42.5 p.c. and television broadcasting for \$110,700,000 or 57.5 p.c.; in 1965 radio received \$72,800,000 or 42.4 p.c. and television \$98,800,000 or 57.6 p.c. Revenue from network and national advertising represented 63.4 p.c. of the total broadcasting revenue and revenue from local advertising 36.6 p.c.; network and national advertising increased by 12.2 p.c., local advertising by 9.7 p.c. and other non-broadcasting revenue by 26.8 p.c. over 1965. Operating expenses in 1966 at \$285,100,000 were 14.4 p.c. higher than in 1965. The growth of revenues exceeded the growth of expenses and resulted in an operating profit of \$25,400,000 in 1966 compared with one of \$21,500,000 in 1965. After adjustment on account of other income and expenses and income taxes, the final net profit of the private sector of the broadcasting industry for 1966 was \$15,050,000 compared with \$13,942,000 in 1965. There are no CBC profits or losses in the figure of net profit because any unexpended balance of the parliamentary grant is treated as an account due to the Government of Canada.

¹ The CBC charges its operations with depreciation, but deducts the charge on its published statements; the charge so made has been added to the government grant. ² Excludes advertising agency commissions, estimated to be \$14,919,132 in 1964, \$17,585,786 in 1965 and \$20,298,498 in 1966.

Section 2.—Postal Service

The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with speed and security. To carry out these duties, it maintains thousands of post offices and utilizes air, railway, land and water transportation facilities. In addition, associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting of COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its transcontinental facilities, the Post Office also assists other government departments with such tasks as selling unemployment insurance stamps, hunting permits, collecting government annuity payments, distributing income tax forms and Public Service employment application forms, and displaying government posters.

Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all the functions of a city office. In larger urban areas, postal stations and sub offices have full functions similar to the main post office, including general delivery service, lock-box delivery and letter-carrier delivery.

Much sophisticated automatic equipment has been installed in Canada's larger post offices, which could be described as complex semi-automated plants. Such devices include conveyors and chutes, parcel and bag sorting machines, photo-electric counters, intercom systems, observation gallery telephone systems, and industrial music. Outside the post office building are found such innovations as mailmobiles, automatic stamp vending machines, and curbside plastic mail boxes.

The operating service of the Post Office Department is organized into 14 districts, each under a district director. These district directors and the postmasters, Toronto, Montreal, Vancouver, Winnipeg and Ottawa, report directly to the Assistant Deputy Postmaster General Operations, who has the responsibility of conducting the normal field operations of the Postal Service. The operating and support functions required in the provision of postal service to the public are the responsibility of the local postmasters who receive technical and administrative assistance from district offices at strategic points.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly inhabited point of Canada), to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily, intersected by branch and connecting lines radiating to every quarter and linking up with the United States airmail system. All first-class domestic mail up to and including eight ounces in weight is carried by air between one Canadian point and another, whenever delivery can thus be expedited. Air stage service provides the only means of communication for many areas in the hinterland. There are approximately 46,000 miles of airmail and air stage routes. However, the railways are still the principal means of distant mail transport.

At Mar. 31, 1966 there were 11,274 post offices in operation, distributed provincially as follows: Newfoundland 687, Prince Edward Island 106, Nova Scotia 774, New Brunswick 508, Quebec 2,469, Ontario 2,722, Manitoba 805, Saskatchewan 1,170, Alberta 1,049, British Columbia 920, Yukon Territory 20, and Northwest Territories 44. Letter-carrier delivery, performed in 201 urban centres, employed over 8,473 uniformed carriers. Rural mail routes are generally circular in pattern and average about 26 miles in length. Some 939 side services transport mail between post offices, railway stations, steamer wharves and airports, and 1,787 stage services convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is expanding and more than 485 such services were in operation in 1966, many of them replacing or reducing conveyance by rail. In 1966 there were 915 city mail services transporting mail to and from post offices, postal stations and sub post offices, collecting mail from street letter boxes and delivering parcel post. Over 50,000,000 miles are travelled annually on about 9,800 mail services; both land mail and coastal mail services are performed under contract.

Revenue and expenditure of the Post Office Department for the five years ended Mar. 31, 1966 are shown in Table 10; gross revenue receipts are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during 1965-66 was \$105,878,986, and receipts from postage meter or postage register impressions and postage paid in cash by other means amounted to \$151,954,233.

10.—Revenue and Expenditure of the Post Office Department, Years Ended Mar. 31, 1962-66

NOTE.—Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

of semi-staff and staff post offices.

²In accordance with new accounting practice.

³Excludes rental

In the year ended Mar. 31, 1966, post office money orders, issued for any amount not exceeding \$100 and payable in almost any country of the world, were sold at more than 9,160 post offices and money orders payable in Canada only, for amounts not exceeding \$15.99, were sold at some 1,415 additional post offices. Table 11 shows the amount of money order business conducted by the Postal Service in recent years.

11.—Operations of the Money Order System, Years Ended Mar. 31, 1962-66

A statement on the financial business of the Post Office Savings Bank will be found in Chapter XXV on Banking, Other Commercial Finance and Insurance.

Section 3.—The Press*

The freedom of the public in Canada is strenuously exercised by an omnipresent press. Daily newspapers published in the country in 1966 numbered 118, counting morning and evening editions separately. Combined circulation was about 4,336,000—83 p.c. in English and 17 p.c. in French. Publishers' surveys show that each newspaper is read by an average of three persons.

Daily newspaper advertising revenue in 1966 was \$234,915,000 and circulation revenue was \$84,782,000. By comparison, advertising revenue of 291 private radio stations in Canada in 1966 was \$78,000,000 and of 65 private television stations \$76,000,000. There were 13 daily newspapers with circulation in excess of 100,000, accounting for about 54 p.c. of total circulation. There were 12 dailies published in the French language, 10 of them located in Quebec. Although the circulation of daily newspapers blankets the more populous areas, well beyond publishing points, smaller cities and towns and rural areas are also served by about 800 weekly newspapers catering to local interests and exercising important local influence. The Canadian society is also enriched by 81 ethnic daily or weekly newspapers published in many languages, often sprinkled with English.

About 60 p.c. of Canada's daily newspapers are privately owned or independent. There are three major newspaper chains in the country, owned by Southam Press Ltd. (eight dailies), Thomson Newspapers Ltd. (28 dailies) and FP Publications Ltd. (eight dailies). Both Southam and Thomson Newspapers are publicly owned companies with shares traded on Canadian stock exchanges. Papers in the Thomson chain are concentrated in the smaller cities. Southam accounts for about 20 p.c. of total daily circulation, FP for about 18 p.c. and Thomson 7 p.c.

In addition to their own news-gathering staffs and facilities, Canadian newspapers subscribe to a number of syndicated agencies and wire services, the largest being Canadian Press which is a co-operative agency owned and operated by Canadian dailies. Largely by teletype and wirephoto transmission, it provides its 103 member newspapers with world and Canadian news and also serves weekly newspapers and radio and television stations. CP has its own news-gathering staff and each member newspaper provides the agency with important local news for transmission to fellow members and members share the cost in ratio to the size of population of the cities in which they publish.

CP carries world news from Reuters, the British agency, and from Associated Press, the United States co-operative, and these agencies are offered CP news on a reciprocal basis. CP maintains a French-language service in Quebec and translation services for both English and French Canada.

United Press International of Canada, the second major news wire service in Canada, is a private company and an affiliate of United Press International World Service. It provides Canadian and international news and pictures to 50 subscribers in Canada and is an outlet for Canadian news through United Press International facilities. Certain foreign newspapers maintain bureaus in Ottawa and elsewhere in Canada to collect and interpret Canadian news.

Press Statistics.—The following tables are based on data estimated from *Canadian Advertising*. Circulation figures are given for daily English-language and French-language newspapers only. Such circulation figures are relatively easy to obtain because, in their own interest, newspapers qualify for and subscribe to the Audit Bureau of Circulation. For these, ABC 'net paid' figures have been used; 'controlled' (free) distribution newspapers are not included. On the other hand, circulation data for foreign-language newspapers, weekly newspapers, weekend newspapers and magazines are incomplete and therefore not usable.

* An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 (circa) 1900. A second article appearing in the 1959 edition brings that account up to 1958.

Revenue from Printing and Publishing.—One of the industrial groups for which information is collected by the DBS in its annual Census of Manufactures is the printing, publishing and allied industries group which includes establishments engaged primarily in the publishing and printing of newspapers, magazines, periodicals, books, almanacs, maps, guides and the like, as well as establishments printing such publications for publishers, publishing firms that do no printing, and engraving, stereotyping and allied industries. Of interest in connection with press statistics is the amount of revenue received by these industries from advertising and from subscriptions or sales, which is given for the years 1964 and 1965 in Table 16. Additional data on manufacturing activity of this industrial group are included in Chapter XVI on Manufactures.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services, including amusement services such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

Section 1.—Merchandising and Service Establishments*

The surveys of merchandising and service establishments centre around a census of such business establishments. The first census of this kind related to business transacted for the year 1930 and similar censuses were taken for 1941, 1951 and 1961. The 1961 census, however, collected a wider range of data than the previous censuses; gross margin information was collected from retail stores and wholesalers, operating expense figures were collected from wholesalers and service businesses, and more information was sought about the operating characteristics of retailers and wholesalers. Detailed results are given in the census reports.† In addition, a considerable amount of supplementary

* Prepared in the Merchandising and Services Division, Dominion Bureau of Statistics.

† Vol. VI (Pt. 1) Census of Merchandising; Retail Trade (Series 6.1). Vol. VI (Pt. 2) Census of Merchandising Wholesale Trade; Services (Series 6.2). Special subject series.

information on the censuses of merchandising and service establishments may be found in *Trends in Canadian Marketing*, one of a series of Census Monographs commissioned by the Dominion Bureau of Statistics following the 1961 Census.* This study attempts to identify and explain long-run changes in Canada's distribution system as revealed by DBS data.

Each census of merchandising and service establishments forms a new base for intercensal monthly, quarterly and annual surveys, which are sample surveys for some businesses and full coverage for others. Because of the need for more frequent survey bases, it was considered advisable to take a less detailed census every five years instead of every ten, and to place more emphasis on the sample surveys during the intercensal period for the collection of detail such as commodity content of sales to retailers, gross margin data and the analysis of sales by type of buyer. The first quinquennial census was taken in 1966, data from which will become available about mid-1968. The principal statistics derived from that census will be included in the 1969 Year Book. This Section contains current intercensal information on the distributive trades.

Retail Trade

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The value of retail sales, estimated from intercensal sample surveys, increased by 29 p.c. during the period 1963-67. Estimates, by province and by kind of business, for 1963-67, not adjusted for price changes, are shown in Table 1.

* By G. Snyder, Director, Merchandising and Services Division, DBS, in collaboration with Prof. M. S. Moyer, York University. Queen's Printer, Ottawa. \$4. 322 p. (Catalogue No. 99-543/1967).

New Motor Vehicle Sales.—As shown in Table 2, the value of new motor vehicles sold has continued to climb each year, reaching a peak of \$2,824,591,000 in 1966. A total of 827,431 cars, trucks and buses were sold that year, about 3,500 fewer than in 1965.

Shopping Centres.—Results of the tenth annual survey of retail outlets in shopping centres throughout Canada show that, in 1965, 9.0 p.c. of all retailing activity took place in such centres, compared with 2.5 p.c. in 1957. For purposes of the survey, a shopping centre is defined, briefly, as "A group of stores which are planned, developed and designed as a unit . . . contain a minimum of five retail establishments . . . have a minimum of 20,000 square feet of usable parking area adjacent to it . . . contain either a grocery and combination store, a department store or a chain variety store. All establishments do not necessarily have to be leased from a single (private or collective) ownership . . .".

There were 24 new shopping centres in operation in 1965, an increase partly offset by the loss of seven centres which did not meet the definition requirements. The net result was an increase of 17 centres, raising the total from 369 to 386. Of the 17.5-p.c. increase in sales volume in 1965 over 1964, 22.6 p.c. was accounted for by the 24 new centres and the remainder was contributed by increases in the number of stores and the volume of sales in existing centres.

There is a continuing trend in the relationship between size of shopping centre and sales. In 1965, centres of 5-15 stores made up 72.8 p.c. of the total number and contributed 35.2 p.c. of the total sales, while centres with 31 or more stores made up only 8.3 p.c. of the total number but were responsible for 36.3 p.c. of the sales. The continued importance of regional shopping centres is due in large measure to the heavy concentration of suburban department store branches in these centres; in 1965, the 34 department store

outlets in the larger centres accounted for 45.3 p.c. of the total sales in this type of development. All trades represented in shopping centres continued to experience substantial gains in sales volume during 1965.

Vending Machine Operators.—The Dominion Bureau of Statistics undertakes an annual survey designed to measure the value of sales through automatic vending machines owned or operated by vending machine operators. In 1966, such sales reached a high of \$107,539,600, a figure 19.7 p.c. above that of the previous year. The 769 vending machine firms engaged in this business operated more than 84,000 merchandise vending machines in a wide variety of locations across the country. In addition, they utilized 523 micro-wave and infra-red ovens and 1,203 coin and bill changers in the course of their operations.

Wholesale Trade

Total sales of wholesalers, estimated from the results of intercensal sample surveys, have increased continuously over the past several years, reaching a new high in 1967 of \$13,526,000,000, about 4 p.c. higher than in 1966. As shown in Table 6, all business groups except "Meat and dairy products" and "Coal and coke" reported increases over the previous year. These estimates represent only the sales of wholesalers proper, the operations of agents and brokers as well as those of manufacturers' sales branches being excluded.

6.—Wholesale Sales, by Kind of Business, 1963-67

NOTE.—Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for resale.

Farm Implement Sales.—The value, at wholesale prices, of new farm implements and equipment sold in 1966 amounted to \$416,914,000, an increase of 12.3 p.c. over the value of such sales in 1965. Increases occurred in all regions of Canada and in all major groups of implements except haying machinery, harvesting machinery and dairy machinery and equipment. In addition to the amount spent on new machinery, \$61,990,000 was spent in 1966 for repair parts, 11.4 p.c. more than in 1965.

Restaurants.—Restaurants, caterers, cocktail lounges and taverns, formerly a part of the retail trades, were transferred in 1960 (as a result of revisions in the standard industrial classification) to the service trades sector. A DBS monthly bulletin *Restaurant Statistics*, commenced in July 1967, shows receipts of the following trades: eating places, eating places with alcoholic beverages, eating places with other merchandise, fish and chip shops, eating places with motel and/or cabins, and eating places with alcoholic beverages with motel and/or cabins.

Total receipts of these types of eating places have grown from \$852,735,000 in 1962 to \$1,062,588,000 in 1966, an increase of 24.6 p.c. over the five years. The largest percentage growth took place in Newfoundland (39.2 p.c.) Nova Scotia (38.4 p.c.) and British Columbia (32.9 p.c.) but the largest value increase took place in Quebec where restaurant receipts rose from \$290,000,000 to \$382,000,000.

Motion Picture Theatres.—In 1966, the receipts of motion picture theatres, both regular and drive-in, reached their highest level of the past decade. The \$94,366,239 received in admissions was 10.8 p.c. higher than in 1965. Amusement taxes, which amounted to \$6,517,892, increased at a somewhat faster rate (16.7 p.c.). These increases were divided fairly evenly between the two types of theatres; those of regular motion picture houses rose by 10.1 p.c. and those of drive-in theatres by 11.6 p.c. In contrast, the total number of admissions declined for the second successive year, dropping 1 p.c. to 98,959,208 for all types of theatres in 1966. An increase of nearly 500,000 in admissions to drive-ins was more than offset by a drop of over 1,400,000 in those to regular theatres.

Film Distributors.—During 1966, films were distributed by 62 companies through 126 offices located across Canada. These exchanges had total receipts of \$53,389,163 in 1966 compared with \$47,137,047 in the previous year, and paid \$4,425,247 in salaries and wages to 813 employees.

Receipts from the rental of films increased by \$6,832,382 during 1966 to reach a new high of \$53,039,160. Revenue derived from rentals for theatrical use amounted to \$33,966,529, for television use \$18,136,463 and for other use \$936,168. In addition, \$40,258 was derived from the sale of advertising and \$309,745 from other sources. New films released for theatrical bookings numbered 984, of which 637 were feature films, 164 cartoons, 110 newsreels and 73 other short subjects. Of the feature films, 228 originated in the United States, 157 in France, 108 in Italy, 62 in Britain, 11 in Canada and 71 in other countries.

Motion Picture Production.—In 1966, there were 82 private firms and eight government agencies engaged principally in the production and printing of motion picture films and filmstrips for industry, government, education and entertainment. The 82 private firms, which exclude television stations, employed 944 persons, paid \$4,852,789 in salaries and wages and had a gross revenue of \$17,943,784, the latter about 26 p.c. higher than in 1965. In addition, 10 firms in other business categories produced 355 films including 41 information or documentary films for television use, 18 non-theatrical films, 25 silent motion picture films, 176 commercial advertising films for television, 88 other films for unspecified use, six silent filmstrips and one sound filmstrip. These firms derived \$215,995 in revenue from motion picture production.

Table 12 provides summary data of motion picture production in 1965 and 1966, by private industry and government agencies and by type of film produced. In total, in 1966, private and government agencies printed 62,005,774 feet of 16 mm. film in black and white, 26,312,596 feet of 16 mm. film in colour, 11,591,627 feet of 35 mm. film in black and white and 5,088,060 feet of 35 mm. film in colour. There were 42 sound motion pictures of five minutes or longer made for other than Canadian sponsors.

Power Laundries and Dry Cleaning and Dyeing Plants.—In 1965 the combined receipts of laundries and dry cleaning and dyeing plants rose by 8.9 pc. over 1964, reaching \$226,547,054. A total of 2,248 plants employed 33,654 people and paid out \$104,593,378 in salaries and wages. The cost of materials and supplies used in such operations amounted to \$22,650,779.

The ratio of advertising expenditures to value of factory shipments, by industry group, is available for the first time for 1965 and is given in Table 15. It should be noted that the selling value of factory shipments as used for purposes of this table is *net* value, after adjustment for returned goods, discounts, allowances, sales and excise taxes, duties, returnable containers and charges for outward transportation by common or contract carriers.

15.—Advertising Expenditures as a Percentage of Value of Factory Shipments, by Industry Group, 1965

Credit Statistics

Sales Financing.—Although outstanding balances of sales finance companies reached a new high of \$1,852,000,000 at the end of 1966, the value of new paper purchases during the year, at \$1,526,000,000, was more than 3 p.c. lower than in 1965. This decline in the rate of acquisition of financial paper, the first since 1960-61, was attributable for the most part to a drop of nearly \$58,000,000 or 17.6 p.c. in new paper purchases for non-vehicular commercial goods, and to smaller declines for used passenger cars and commercial vehicles and non-vehicular consumer goods. The only exceptions occurred in the financing of new passenger cars and commercial vehicles. The balances outstanding of sales finance companies were higher at the end of 1966 for every class of goods except non-vehicular commercial goods, which declined by nearly 8 p.c.

16.—Retail Instalment Paper Purchased and Balances Outstanding, by Class of Goods, 1962-66

(Millions of dollars)

¹ Totals are not the exact addition of the components because of rounding of the figures.

Consumer Credit.—Total balances outstanding on credit extended to consumers by retail stores and selected financial institutions have increased rapidly during the past decade, passing the \$7,000,000,000-mark by the end of 1965 and reaching an estimated

\$8,400,000,000 by the end of 1967. Although the data in Table 17 do not include all possible sources of consumer credit, such as service credit and loans between individuals, returns from the selected holders, which include credit extended to individuals for the purchase of consumer goods and services or for other than commercial purposes, indicate that balances outstanding have nearly tripled since 1957.

17.—Consumer Credit Balances Outstanding, by Selected Holders, 1957-67¹

Section 2.—The Marketing of Agricultural Products*

Subsection 1.—The Grain Trade, 1965-66

Stocks of the five major Canadian grains (wheat, oats, barley, rye and flaxseed) amounted to 747,364,000 bu. on Aug. 1, 1965, compared with 770,721,000 bu. on Aug. 1, 1964. Since estimated 1965 production of these grains was 1,324,378,000 bu., some 14 p.c. above the 1964 level of 1,156,951,000 bu., domestic supplies for the crop year 1965-66 amounted to 2,071,905,000 bu. compared with 1,927,831,000 bu. for the previous year. Marketings of the six major grains in the Prairie Provinces (including rapeseed) in 1965-66 totalled 769,493,000 bu., 14 p.c. above the previous year's level of 675,560,000 bu. and 34 p.c. above the ten-year (1954-55—1963-64) average of 572,514,000 bu. Deliveries of each of the six grains were above the previous year; for instance, wheat marketings, which accounted for 74 p.c. of the total deliveries, were 9 p.c. higher. Marketings of the six grains, with totals for 1964-65 and ten-year averages, respectively, in brackets were, in millions of bushels: wheat, 569.4 (524.5, 390.4); oats, 51.7 (41.0, 53.8); barley, 93.9 (75.0, 100.3); rye, 12.1 (7.3, 7.3); flaxseed, 23.7 (16.8, 16.1); and rapeseed, 18.8 (10.9, 6.7).

Marketings of wheat, oats and barley continued under the compulsory crop-year pools system of the Canadian Wheat Board. At the beginning of the marketing year, an initial quota of 100 units, as in the preceding year, was in effect at local delivery points. However, permit holders were entitled to deliver a maximum of 300 bu. of wheat *or* 500 bu. of barley *or* 500 bu. of rye *or* any combination of these grains which, when calculated on a unit basis, did not exceed 100. The initial quota was followed by general quotas based on bushels per specified acre; specified acreage consisted of each permit holder's acreage seeded to wheat (including Durum), oats, barley and rye, the summerfallow acreage and the acreage seeded to eligible grasses and forage crops. The first general quotas were established on Aug. 23, 1965 and were extended and increased as local country elevator space became available.

The initial delivery quota for rapeseed of the larger of 3 bu. per seeded acre *or* 150 bu., was increased on Sept. 27 to 5 bu. per seeded acre *or* 200 bu., on Nov. 1 to 8 bu. per seeded acre *or* 300 bu., on Dec. 13 to 12 bu. per seeded acre, and on Jan. 31, 1966 was declared open for the remainder of the 1965-66 crop year. The initial delivery quota for flaxseed of the larger of 3 bu. per seeded acre *or* 150 bu. was increased on Oct. 11 to 5 bu. per seeded acre *or* 250 bu., on Dec. 13 to 8 bu. per seeded acre *or* 400 bu. and on Jan. 31, 1966 was declared open for the remainder of the crop year. Rye, which was contained in the specified acreage, was placed on a supplementary quota of the larger of 5 bu. per seeded acre *or* 200 bu. on Dec. 28, and was declared open as of July 18, 1966.

On Aug. 1, 1965, stocks of the six principal grains in store at both country and terminal elevators amounted to 510,300,000 bu., some 51,100,000 bu. more than at the same date of 1964. In 1965 the volume of high-moisture grain that required conditioning was very large and because of heavy commitments for dry grain for fall shipping, priority for the movement of high-moisture grain was not given until after the close of navigation. The Canadian Wheat Board, on Dec. 3, authorized an advance delivery of wheat, oats, barley and rye having a moisture content of 15.7 p.c. or over, up to 4 bu. per specified acre in excess of established quotas, provided such deliveries plus quota deliveries did not exceed 6 bu. per specified acre. This authorization was revised on Jan. 7, 1966 to 8 bu. per specified acre and on Mar. 10 to 10 bu. The necessity of moving this high-moisture grain disrupted the normal flow of dry grain and thus temporarily retarded the advancement of delivery quotas in certain areas. Delivery quotas were declared open on July 18,

* Prepared in the Agriculture Division, Dominion Bureau of Statistics.

1966 and remained so into the first three weeks of the following crop year, since there was a large volume of space available in country elevators and heavy sales commitments had to be met in the first part of the 1966-67 crop year.

Wheat.—Domestic supplies of wheat for the 1965-66 crop year totalled 1,161,948,000 bu., 10 p.c. above the 1,059,874,000 bu. of the previous year but 4 p.c. below the 1963-64 record of 1,210,692,000 bu. Both the 1965 carryover stocks of 513,024,000 bu. and the 1965 production of 648,917,000 bu. were higher than the 1964 levels of 459,440,000 bu. and 600,424,000 bu., respectively. Exports of wheat and flour, in terms of wheat, in 1965-66 amounted to 584,906,000 bu., slightly below the record 594,548,000 bu. exported in 1963-64 but sharply higher than both the ten-year average of 335,788,000 bu. and the long-term average of 275,567,000 bu. Domestic disappearance was 156,920,000 bu. compared with 147,256,000 bu. in 1964-65 and 156,704,000 bu. in 1963-64. Since the disappearance was above the 1965 production, carryover stocks at July 31, 1966 were down to 420,122,000 bu. compared with 513,024,000 bu. at the same date of 1965.

SUPPLY AND DISPOSITION OF CANADIAN WHEAT
CROP YEARS ENDED JULY 31, 1957-66

The initial payment in 1965-66 was \$1.50 per bu., basis No. 1 Northern in store Fort William-Port Arthur or Vancouver; there were no adjustments or interim payments on the 1965-66 wheat pool. Producers delivered 559,790,000 bu., including 18,932,000 bu.

of Durum, and the amount of the final payment distributed to producers was \$270,030,000, of which \$9,949,000 was distributed to producers of Durum wheat. After deducting the 1-p.c. Prairie Farm Assistance Act levy, the average final payment on spring wheat (other than Durum) was 48.087 cents per bu. and the average final payment on Durum grades was 52.549 cents per bu. The total payment for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver and before deduction of the PFAA levy, amounted to \$1.99699 per bu.

During 1965-66, the three-year International Wheat Agreement, which became effective Aug. 1, 1962, was extended for one year. Under the Agreement, sales continued to be quite widely distributed, with 28 of the 38 importing countries included in the pact purchasing wheat and/or flour from Canada. Under the terms of the Agreement, purchases of Canadian wheat and flour amounted to the equivalent of 197,882,000 bu. during 1965-66 and accounted for 27 p.c. of the total sales under the Agreement. The major importers of Canadian wheat under the Agreement were, in millions of bushels: Britain, 78.5; Federal Republic of Germany, 22.9; Belgium and Luxembourg, 10.8; Switzerland, 8.1; and Venezuela 6.3. The leading markets for Class II wheat and wheat flour were: the Soviet Union, 201.6; Mainland China, 74.0; Poland, 13.3; East Germany, 8.1; Italy, 7.7; and Czechoslovakia 7.5.

Other Grains.—The supply and disposition of the major Canadian grains for the crop years 1964-65 and 1965-66 are shown in Table 19.

As in 1964-65, the initial 1965-66 payment for oats, basis No. 2 C.W. in store Fort William-Port Arthur, was 60 cents per bu., and that for barley, basis No. 3 C.W. Six-Row in store Fort William-Port Arthur, was 96 cents per bu. No interim payments were made during the crop year on either oats or barley. The final payment on oats was \$12,314,000 and, based on 49,627,000 bu. delivered, averaged 24.8129 cents per bu. after deduction of the 1-p.c. PFAA levy. The final payment on barley was \$29,231,000, based on deliveries of 88,920,000 bu. and averaged 32.8729 cents per bu. after deduction of the levy. Total prices, basis in store Fort William-Port Arthur, realized by producers for representative grades prior to the levy were, per bushel: No. 2 C.W. oats, \$0.84516; No. 1 Feed oats, \$0.80187; No. 3 C.W. Six-Row barley, \$1.28594; and No. 1 Feed barley, \$1.19914.

During 1965-66, combined exports of oats, bagged seed oats, barley, rye, flaxseed and rapeseed (including customs exports of oatmeal and rolled oats, malt, rye flour and meal in terms of grain equivalent) amounted to 94,562,000 bu., a figure 17 p.c. higher than the 1964-65 level of 81,061,000 bu. but 2 p.c. lower than the ten-year (1954-55-1963-64) average of 96,760,000 bu. Exports of each of the five grains were higher than in the previous year; exports of oats in bulk totalled 15,252,000 bu. compared with 14,727,000 bu. in 1964-65. The major markets for this grain were, in millions of bushels: the Federal Republic of Germany, 6.8; the Netherlands, 4.9; and the United States, 1.1. Corresponding figures for 1964-65 were: 4.0, 5.2 and 2.5, respectively. In 1965-66, Britain received 638,000 bu. and Ireland, Belgium and Luxembourg, and Italy each received 500,000 bu. In addition, exports of Canadian oatmeal and rolled oats amounted to the equivalent of 401,000 bu. in 1965-66 compared with 435,000 bu. the year before.

Barley exports at 33,720,000 bu. were slightly higher than the 1964-65 level of 32,738,000 bu. Shipments went to the following destinations, with amounts in millions of bushels and figures for the previous year in brackets: Italy, 11.9 (2.4); Japan, 6.1 (8.9); Britain, 4.7 (9.8), United States 4.7 (7.7); Israel, 3.0 (0.6); the Federal Republic of Germany, 1.5 (nil); Austria, 0.7 (0.6); Norway, 0.6 (nil); the Netherlands, 0.3 (nil); Mainland China, nil (2.0); Ireland, nil (0.5). In addition, exports of malt were the equivalent of 4,309,000 bu., little changed from the 1964-65 figure of 4,280,000 bu., and were shipped to 27 destinations, the major markets being, in thousands of bushels: United States, 895; Britain, 613; Venezuela, 418; the Philippines, 383; Puerto Rico, 312; and Guatemala, 260.

In 1965-66, exports of Canadian rye, at 8,050,000 bu., were the highest since 1955-56 when they amounted to 12,918,000 bu. The principal markets in 1965-66 were, in thousands of bushels: the Netherlands, 2,331; Japan, 2,274; United States, 1,575; and Norway, 966.

In 1965-66, 18,936,000 bu. of Canadian flaxseed moved overseas, compared with 14,346,000 bu. in the previous year. The leading markets were, in thousands of bushels: Britain, 5,119; Japan, 4,308; the Netherlands, 3,732; and the Federal Republic of Germany, 2,033. Relatively smaller shipments went to some ten other overseas destinations. Exports of linseed oil, mainly to Britain, were equivalent to about 570,000 bu. of flaxseed.

Exports of rapeseed in 1965-66 amounted to a record 13,626,000 bu. in sharp contrast to the 9,274,000 bu. exported in the previous year. Major markets were, in thousands of bushels: Japan, 6,986; Italy, 2,804; the Netherlands, 1,470; the Federal Republic of Germany, 1,075; and Pakistan, 794. Mustard seed exports at 1,767,000 bu. were considerably higher than the 1,239,000 bu. exported in 1964-65 and went mainly to the United States, the Netherlands, Japan, and Belgium and Luxembourg.

Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.—Total receipts of the five major grains at eastern elevators in the 1965-66 crop year amounted to 523,545,000 bu., 31 p.c. more than in the previous crop year. Shipments totalled 544,298,000 bu., an increase of 51 p.c. over the 1964-65 level of 360,388,000 bu.

21.—Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1962-66

NOTE.—Figures for the crop years ended 1922-61 are given in the corresponding table of previous Year Books beginning with the 1931 edition.

Lake Shipments of Grain.—The 1966 navigation season opened at the Canadian Lakehead on Apr. 3 and closed on Dec. 20. During the season, shipments of wheat, oats, barley, rye, flaxseed, rapeseed and buckwheat totalled 494,591,000 bu., a 21-p.c. increase over the 410,298,000 bu. shipped during the 1965 navigation season which opened on Apr. 20 and closed on Dec. 16.

Production and Exports of Wheat Flour.—Production of wheat flour in 1965-66 amounted to 43,531,000 cwt. and wheat milled for flour totalled 97,926,000 bu., representing increases of 11 p.c. and 12 p.c., respectively, over the previous year. Of the wheat milled for flour, approximately 85,942,000 bu. were Western Canadian spring wheat (other than Durum) and the remainder was made up of 7,146,000 bu. of Ontario winter wheat, 3,613,000 bu. of Durum wheat and 1,225,000 bu. of other types. Utilization of milling capacity, based on a daily operating potential of some 178,000 cwt., averaged 85.4 p.c. as against 76.7 p.c. in the previous year. Exports of wheat flour in 1965-66 amounted to 16,576,000 cwt., a figure approximately 21 p.c. higher than the 13,714,000 cwt. exported in 1964-65.

Subsection 2.—Livestock Marketings*

The livestock industry was quite prosperous in 1966. Although the volume of commercial marketings was down for all classes of livestock, the value, as reported by the Canada Department of Agriculture, was the highest ever reached in Canada. The over-all average price for cattle and calves was substantially higher for all months of 1966 than for the corresponding months of 1965, resulting in an increase in the value of commercial marketings of \$165,000,000 over the previous year. The situation was about the same for the hog industry. Marketings were down but the increase in the average price of Grade B hogs at all stockyards by \$3.05 per cwt. to \$34.05 effectively raised the value of commercial marketings from \$343,000,000 to \$373,000,000. The average price of sheep and lambs was also higher than in the previous year but not enough to offset the decline in marketings. The result was a \$600,000 decrease in the value of commercial marketings.

In addition to cattle sold through public stockyards and directly to packing plants, there were 51,317 cattle reported shipped from country points in one province to country points in another, and 148,753 shipped direct on export, totalling 3,518,179. Alberta, Prince Edward Island and Newfoundland were the only provinces showing gains in marketings over 1965 but these gains were relatively small compared with the increases realized in 1965. Calf marketings like other types of livestock were down in 1966, the main feature being a 21.7-p.c. increase in the number returned to country feedlots. The average dressed weight per carcass of cattle slaughtered in inspected packing plants during the year was 545.5 lb., an increase of almost 12 lb. over the previous year and of 3.5 lb. over 1964. Choice and good beef accounted for 51.6 p.c. of total cattle gradings in 1966.

Hogs graded at inspected and approved packing plants in 1966 plus those exported direct from country points totalled 6,870,017, 3.0 p.c. below the previous year. Although increases were noted in seven provinces, reductions in marketings in Alberta, Saskatchewan and Ontario more than offset them. Hogs dressed 2 lb. heavier in 1966 and the proportion of total gradings, excluding sows and stags, classed as Grade A increased from 41.0 p.c. in 1965 to 41.9 p.c. in 1966.

* More detailed information is available from DBS annual report *Livestock and Animal Products Statistics* (Catalogue No. 23-203), and the Canada Department of Agriculture publication *Livestock Market Review*. Statistics of livestock and poultry production and disappearance are given on pp. 503-507.

Section 3.—Storage and Warehousing

This Section carries data on licensed grain storage and the public warehousing industry only. Information on other types of storage may be obtained from the following sources: cold storage and storage of food—Economics Branch of the Canada Department of Agriculture; storage of petroleum and petroleum products—Energy Statistics Section of the Manufacturing and Primary Industries Division, DBS; customs warehouses—Port Administration Branch of the Department of National Revenue.

Licensed Grain Storage.—Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 677,199,000 bu. at Dec. 1, 1965, the increase over the same date of 1964 being 4,102,000 bu. Greater capacity in Western country elevators accounted for the total increase plus a 265,000-bu. drop in other storage positions. The movement of grain in and out of storage during 1965-66 is discussed at p. 910; Table 26 gives the amount in storage at three dates during the year. On July 31, 1966, 57.9 p.c. of the licensed storage capacity was occupied as compared with 69.8 p.c. on the same date of 1965.

The Public Warehousing Industry

The summary statistics of the warehousing industry presented in Table 27 cover the operations of the majority of firms offering general merchandise and refrigerated storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

Section 4.—Co-operative Organizations*

For the year 1965, 2,615 local co-operatives reported a total business volume of \$1,851,800,000, assets of \$888,000,000 and membership of 1,615,000. A reduction in wheat sales brought the volume of business down slightly from the record levels of the previous year. Assets were up by \$70,000,000, with all provinces contributing to the increase. Reporting associations decreased by 28 but reported membership increased by

* Prepared in the Economics Branch, Canada Department of Agriculture, Ottawa.

19,000. Volume of business in 1965 consisted of the following: marketing of farm products, \$1,240,500,000; sales of supplies, \$556,400,000; service revenue (trucking, grinding, seed cleaning, etc.), \$43,600,000, and miscellaneous income (rent, interest, dividends, etc.), \$11,300,000. As in previous years, marketing and purchasing co-operatives were the dominant group of co-operatives in 1965, accounting for 96 p.c. and 86 p.c., respectively, of total volume and total assets. Service and fishermen's co-operatives made up the remainder.

Marketing and purchasing co-operatives recorded a total volume of business of \$1,774,600,000, a decrease of \$6,000,000 from the previous year, but total assets increased from \$698,000,000 to \$762,000,000 in the same period. Business volume included: farm product marketings, \$1,201,700,000; sales of supplies, \$549,400,000; service revenue, \$13,100,000; and miscellaneous income, \$10,400,000. Farm product marketings were down \$32,000,000 during the year as a result of a decrease in grain sales which more than offset gains in other farm products. Grain sales at \$574,000,000 were down \$69,000,000, reflecting a drop-off in Canadian wheat exports from the peak levels of 1964. Grain and seeds continued to be the largest class of farm products handled by co-operatives, accounting for 48 p.c. of total marketings, followed by dairy products, 25 p.c., and livestock 18 p.c. On a provincial basis, the bulk of grains and seeds and livestock were handled by Prairie Province co-operatives, while those in Ontario and Quebec marketed 54 p.c. of the dairy products. Sales of supplies recorded an increase of \$26,000,000 or 5 p.c. over the preceding year. The increase was broadly based, being shared by all sales categories except seed, and all provinces except Nova Scotia. Food products represented 27 p.c. of supply sales, followed by feed, 23 p.c., and petroleum 16 p.c. Quebec led the provinces in value of supply sales with 22 p.c. of the total, followed by Saskatchewan with 21 p.c. and Ontario with 16 p.c. Alberta experienced the greatest sales growth during the year with a gain of 13 p.c. Total assets of marketing and purchasing co-operatives rose to \$762,000,000 at the end of 1965, an increase of \$65,000,000 or 9 p.c.

Service co-operatives perform such services as rural electrification, medical insurance, transportation, grazing, cold storage and seed cleaning for their members. For 1965, 1,029 of these co-operatives reported a total membership of 279,000 and a total business volume of \$45,973,000. Business volume in 1965 was composed of: service revenue, \$30,041,000; miscellaneous income, \$732,000; and sales of products and supplies, \$15,200,000. Total assets amounted to \$107,713,000 compared with \$105,145,000 in the preceding year. Fishermen's co-operatives reporting for 1965 numbered 91 with 11,000 members and total assets of \$17,819,000; business volume was \$31,247,000 as against \$27,264,000 in 1964 and consisted of fish marketings, \$24,981,000; fishing and other supplies, \$5,570,000; service revenue, \$505,000; and miscellaneous income, \$191,000.

Wholesale co-operatives are federations of local co-operatives which act as central marketing agencies and wholesalers for the farm products and supplies of the local co-operatives. The wholesales reported sales of \$413,000,000 in 1965, an increase of \$30,000,000 or 8 p.c. over the previous year. The largest sales items were: livestock, \$90,000,000; food products, \$66,000,000; feed, \$61,000,000; and petroleum, \$51,000,000. Total assets amounted to \$146,000,000 at the end of 1965, an increase of \$23,000,000 or 19 p.c. during the year.

Not included in the above and in the statistics of Tables 28 and 29 are the Arctic co-operatives started in the Canadian North under the Co-operative Development Program in 1959, which caught the interest of the local people and have continued to make steady progress. At the end of 1965 there were 22 co-operatives in operation in the Northwest Territories and northern Quebec and eight groups were in the formative stage. Total sales of these co-operatives at the time were in excess of \$1,000,000, some of the individual co-operatives reaching the \$100,000 level.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

Section 1.—Controls Affecting the Marketing of Farm Products

Subsection 1.—Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners for Canada which, since 1912, has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935.

The Board of Grain Commissioners for Canada.*—The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three—a chief commissioner and two commissioners—reporting to the Minister of Agriculture.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C. The Executive Offices of the Board and other principal offices are situated at Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west. Total personnel is approximately 1,100, including Canadian Government Elevators staff.

On a fee basis, the Board provides official inspection, grading and weighing of grain, and registration of warehouse receipts. All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well

* Prepared by W. J. MacLeod, Secretary of the Board of Grain Commissioners for Canada, Winnipeg, Man.

as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the performance of all obligations imposed upon them by the Canada Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give direction regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four assistant commissioners—one in Alberta, two in Saskatchewan and one in Manitoba. These assistant commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the uniform quality of the top grades of Red Spring wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

The Grain Research Laboratory, located at Winnipeg, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year. Fundamental research is also undertaken; the program is directed toward better understanding of what constitutes quality in cereal grains and toward improvement in the methods of assessing quality.

In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act 1 p.c. of the purchase price of wheat, oats, barley, rye, flax and rapeseed purchased by such licensees.

The Canadian Wheat Board.*—The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 for the purpose of "the marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada" and now operates under RSC 1952, c. 44 as amended. The Board accomplishes its objective through regulation and agreement. It owns no grain handling facilities but, by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic or overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters. In its sales operations, the Board endeavours to meet the wishes of overseas buyers and, on occasion, enters into direct contracts. When an exporter completes an export sale, in his capacity as an agent of the Board, he is responsible for the transaction; he completes the transaction with the buyer and settles with the Board for the purchase of the wheat from the Board.

When the commercial storage facilities are inadequate to handle all the grain produced, it is necessary for the Board to regulate the flow of grain from the producer to these

* Revised by R. L. Kristjanson, Executive Assistant, The Canadian Wheat Board, Winnipeg, Man.

forward positions. The first step is accomplished by the use of producer's delivery permits issued annually by The Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulating the amount of grain delivered by the producer to the country elevator by the use of a quota system and, by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process—transporting the grain from the country elevators to large terminal elevators in Eastern Canada, Churchill or on the West Coast—is carried out by the railways. The Wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs are set by an agreement between the railways and the Government of Canada.

The fourth major step—storing and handling of the grain at terminal elevators—is done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

In the case of oats and barley, the Board's operations are less extensive than those relating to wheat. These two grains are sold in store positions at the terminal elevators at Fort William-Port Arthur and Vancouver. Oats and barley are marketed either on a straight cash basis at prices quoted daily by the Board or on the basis of exchange of futures concluded through the facilities of the Winnipeg Grain Exchange. The Board controls the movement of coarse grains to the Lakehead. The private trade is responsible for the movement of oats and barley from Lakehead or Vancouver positions.

The producer receives payment for his wheat, oats and barley in two or three stages. An initial payment price is established early in the crop year by Order in Council. The initial payment price less the cost of handling grain at the local elevator and the transportation costs to the Lakehead or Vancouver is the initial price received by the producer. This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, does not realize this price and the necessary marketing costs, the deficit is borne by the Federal Treasury. However, with very few exceptions, the Wheat Board has operated without financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wheat Board can confidently foresee a surplus accumulating and if authorized by Order in Council, an interim payment is made to producers. This interim payment is the same amount per bushel to all producers of the same grade of grain. When the Board has sold all the grain or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Board, if authorized by Order in Council, makes a final payment to producers.

Under the Prairie Grain Advance Payments Act, administered by the Board, producers may receive, through their elevator agents, cash advances on farm-stored grain in accordance with a prescribed formula. The purpose of this legislation is to make cash available to producers pending delivery of their grain under delivery quotas established by the Board. Cash advances are interest-free as far as producers are concerned.

Western Canadian producers receive the price for their grain that the Wheat Board receives, less its operating costs including carrying charge, and the general level of prices received by the Board is determined by competitive conditions in world markets. The only subsidy received by the farmer in the Canadian wheat marketing system is the part-payment of storage costs for wheat made by the Government of Canada. Under provisions of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidated Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the end of the crop year in excess of 178,000,000 bu.

Subsection 2.—Controls Over Farm Products Other Than Grain*

The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy. Closely related is regulatory action designed to protect the consumer.

Producers have been concerned about another type of market control, namely that which will give either their organizations or a government agency influence over the price received. In a highly specialized commercial agriculture such as Canada now has, the producer is dependent on the price of his product for his livelihood. Canadian farmers have long attempted to obtain some measure of market control through voluntary organizations, mainly marketing co-operatives. All provinces have made provision for the incorporation of such co-operatives and most, if not all, have provided other assistance to them. In the federal field, the Agricultural Products Co-operative Marketing Act encourages marketing under a co-operative plan.

Other legislation provides for legal control over the marketing of agricultural products, either by a producers' board or a government agency. Legislation of this type includes that pertaining to milk control boards, to producer marketing boards and to industry marketing commissions. Measures pertaining to grain marketing have been reviewed in Subsection 1, pp. 918-920, and the Agricultural Stabilization Act, which provides price support for certain key products is discussed in the Agriculture Chapter, pp. 481-482.

Product Controls.—The federal and provincial departments of agriculture co-operate in establishing and enforcing grades of quality standards for various foods. Some control over size and type of containers used for distribution of agricultural products is exercised by the Canada Department of Agriculture and the Department of Trade and Commerce enforces regulations pertaining to weights and measures (see p. 930).

Controls related to health and sanitation in food handling are developed and enforced at all three levels of government—municipal, provincial and federal. Examples of provincial and municipal action include laws pertaining to the pasteurization of milk, inspection of slaughterhouses and sanitary standards in restaurants. At the federal level, inspection by the Health of Animals Branch of the Department of Agriculture of all meat carcasses that enter into interprovincial trade is required. The Food and Drug Directorate of the Department of National Health and Welfare has wide control over the composition of foods sold and over misleading advertising of foods and drugs.

Marketing Controls.—*The Agricultural Products Co-operative Marketing Act.*—In the late 1930s, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would give to the producer the maximum sales return for his product, less a maximum margin for handling expenses agreed upon in advance. Thus, the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has continuously served agricultural producers since 1939.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. The Government may undertake to guarantee a certain minimum initial

* Prepared in the Economics Branch of the Canada Department of Agriculture, Ottawa.

payment to the producer at the time of delivery of the product, including a margin for handling; sales returns are made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of 80 p.c. of the average price paid to producers for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product. In 1967 the only agreement made was with respect to apples for processing.

Milk Control Legislation.—Most of the provinces enacted milk control legislation before 1940. Many of them finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to carry out some system of licensing which provides for the revocation of such licences if those engaged in the fluid milk business do not conform with the orders of the milk control board.

In all provinces with such boards, the milk control board sets the minimum price which distributors in specified markets may pay producers for Class I milk, that is, milk actually sold for fluid consumption. In Ontario and British Columbia, formulas are taken as a guide in the setting of minimum prices. Most provinces also set either minimum or fixed wholesale and retail prices for fluid milk. The wholesale and retail prices are fixed in Prince Edward Island, Nova Scotia and Saskatchewan; minimum prices are established in New Brunswick, Quebec and Alberta. However, maximum but not minimum prices are set in Manitoba and no control is exercised over milk prices at the wholesale and retail levels in Ontario and British Columbia; in these three provinces some degree of price competition between store and home delivery sales has developed.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk, and (2) authority to require a bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before ceasing to accept milk from any producer, producers to give notice before ceasing to deliver milk to any distributor, and the prohibition of distributors requiring capital investment from producers.

At the national level, a *Canadian Dairy Commission* was established and started operating on Apr. 1, 1967. This is a new departure in the area of agricultural marketing; it is the first time with any farm product that a national agency and provincial agencies have authority to deal with the same industry in their respective areas of jurisdiction. The Canadian Dairy Commission complements provincial function by regulating the marketing and pricing of milk and milk products that move in interprovincial or international trade. Briefly, the function of the Commission is to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers with a continuous and adequate supply of dairy products of high quality. The Commission administers the funds provided by the Federal Government for stabilization purposes. (See also p. 482.)

Producer Marketing Boards.—During the 1930s strong support developed for legislation whereby agricultural producers could exercise legal authority under certain conditions to control the marketing of their produce. The Natural Products Marketing Act of 1936 attempted to provide this power at the federal level but proved *ultra vires*. The Natural Products Marketing (British Columbia) Act 1936 was *intra vires* of provincial government powers and provided the model from which marketing board legislation has evolved in all ten provinces.

While marketing board legislation has been revised from time to time on the basis of experience and there are variations in detail from province to province, the same basic powers are given to producers in all provinces. These powers include authority for a duly constituted producer board to control the marketing of 100 p.c. of a specified commodity produced in a designated area. A producers' board, in at least some provinces, may set production quotas for each farmer. One producers' board may control the marketing of several related commodities and the designated area may be either the whole or part of a province. A producer vote is usually required to establish a producer marketing board whose powers are delegated either by a provincial marketing board, which has certain supervisory authority, or by the Lieutenant-Governor in Council.

The powers of a producers' board provided by provincial legislation are necessarily limited to intraprovincial trade. Under the Agricultural Products Marketing Act, the Federal Government may delegate to a marketing board with respect to interprovincial and export trade similar powers to those obtained with respect to intraprovincial trade under provincial authority. This Act also gives the Governor in Council the right to authorize a provincial marketing board to impose and collect levies from persons engaged in the production and marketing of commodities controlled by it for the purposes of the board, the creation of reserves and equalization of returns.

In 1966 there were 107 such marketing boards, including the Canadian Wheat Board (previously excluded from the total), organized in Canada, 62 of which were in the Province of Quebec and 20 in Ontario; each of the other provinces with the exception of Newfoundland had one or more boards. It is estimated that about 42 p.c. of the 1966 farm cash income was received from sales made under the control of provincial marketing board plans, including the following commodities: hogs, certain dairy products, poultry, wool, tobacco, wheat, soybeans, sugar beets, potatoes, other vegetables, fruits, seed corn, white beans, honey, maple products and pulpwood. As at Oct. 31, 1966, 41 of these provincial boards had received an extension of powers for purposes of interprovincial and export trade from the Federal Government. Five boards had received authority with regard to seven commodities to collect levies in excess of administrative expenses.

Section 2.—Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade that serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

By amendments that came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2, 32, 33, 33A, 33B, 33C and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insur-

* Revised by D. H. W. Henry, Q.C., Director of Investigation and Research, Combines Investigation Act, Department of Consumer and Corporate Affairs, Ottawa.

ance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. Although Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canada competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger that has or is likely to have the effect of lessening competition to the detriment or against the interest of the public. These Sections also make it an offence to participate in a monopoly that has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any service he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance". The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused or counselled the refusal of supplies to a merchant if there were reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "loss leaders" or as bait advertising or was making a practice of engaging in misleading advertising in respect of such articles or of not providing services that purchasers of such articles might reasonably expect.

The Director of Combines Investigations and Research is responsible for investigating combines and other restrictive practices, and the Restrictive Trade Practices Commission is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister of Consumer and Corporate Affairs. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information

available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement, and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister of Consumer and Corporate Affairs, ordinarily required to be published within thirty days.

Under the provisions of the Act, general inquiries may be made into restraints of trade which, although not forbidden or punishable, may affect the public interest. The courts, including the Exchequer Court of Canada, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention or directing the dissolution of a merger or monopoly as the case may be. Application also may be made to the courts for such an order in lieu of prosecuting and convicting for a contravention of the legislation. Prosecutions for offences against the substantive provisions of the legislation (other than Sect. 33C which is punishable only on summary conviction) may be taken either in the provincial courts or with the consent of the accused in the Exchequer Court of Canada.

In the period Jan. 1, 1965 to Aug. 31, 1967, the following reports of inquiries under the legislation were published:—

- (1) Monopoly in Distribution of Propane, British Columbia.
- (2) Thomson Newspapers' Acquisition of the Fort William Times-Journal.
- (3) Shipping Conference Arrangements and Practices.
- (4) Street Paving Tenders in the City of Hull, Que.
- (5) The John Street Pumping Station Contract, Metropolitan Toronto, Ont.
- (6) Distribution and Pricing of Pesticides.
- (7) Pricing Practices of Miss Mary Maxim Ltd.
- (8) Pricing of Ready-Mixed Concrete, Windsor, Ont.
- (9) North Star and Shell Gasoline Consignment Plans.
- (10) Trade Practices in the Phosphorus Products and Sodium Chlorate Industries.
- (11) "Specials" in Eggs, Kingston Area, Ont.
- (12) Glued-Laminated Timbers.

These reports and copies of the annual reports under the Act may be obtained from the Queen's Printer or the office of the Director of Investigation and Research, Combines Investigation Act, Department of Consumer and Corporate Affairs, Ottawa.

Section 3.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1966, provincial government liquor authorities operated 1,136 retail stores and had 96 agencies in smaller centres of population.

Government revenue specifically related to alcoholic beverages and details of sales by value and volume for each province are given below. DBS report, *The Control and Sale of Alcoholic Beverages in Canada* (Catalogue No. 63-202) shows further detail as well as volume figures of production and warehousing transactions, the value and volume of imports and exports and the assets and liabilities of provincial liquor commissions.

1.—Revenue of Provincial and Territorial Governments Specifically Derived from the Control and Sale of Alcoholic Beverages, Years Ended Mar. 31, 1965 and 1966

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages levied by eight provinces.

Section 4.—Miscellaneous Aids or Controls

The National Energy Board.—The National Energy Board was established by the National Energy Board Act, 1959 (SC 1959, c. 46) for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the construction and operation of oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary or advisable in the public interest with regard to such matters. The Act also authorizes the extension of the export and import provisions to oil upon proclamation by the Governor in Council. Amendment made to the regulations in 1966 increased the quantities of electric power and energy that the Board may authorize by order to be exported, authorized the Board to handle applications for the exportation and importation of small quantities of gas where the size of the transaction does not justify the usual procedure, and empowers the Board to authorize the export power under emergency conditions. The Board, which reports to the Minister of Energy, Mines and Resources, consists of a chairman, a vice-chairman and three other members.

The National Oil Policy, announced in 1961, had the initial objective of attaining certain target levels of oil production, including natural gas liquids. Production, which in 1960 had averaged only 544,000 bbl./day, averaged an estimated 1,012,000 bbl./day in 1966, an increase of about 90,000 bbl./day over 1965. Although both domestic and export markets contributed to the growth in 1966, demand for Canadian oil in the United States was particularly buoyant and large-scale shipments of propane started moving to Japan in the final quarter of the year. Two problems in this area received intensive study during 1966, the first relating to the rapid advance in Canada's petroleum resource base indicative of the need for expansion of markets for Canadian oil, and the other relating to the inadequate refinery capacity in Ontario west of the Ottawa Valley which with the persistence of low prices and easy supply conditions on the world oil market has resulted in continuing pressure to use foreign-origin products in that area.

The National Power Policy, announced in 1963, stressed the need for taking full advantage of evolutionary changes in the power industry for the provision of abundant electric energy at lowest possible cost and for a flexible export policy that would permit long-term export of large blocks of power to the United States to assist in the immediate development of large-scale Canadian power projects and the strengthening of Canada's

balance-of-payments position. In pursuance of these aims, the Board co-operates with other agencies in the consideration of interprovincial and international interconnections of electric power systems.

During 1966, the work of the Board included the issuing of 769 certificates, licences and orders, compared with 629 in 1965. Following public hearings, three certificates were issued authorizing the construction of additional gas pipeline facilities; the licences and orders issued concerned the export of electric power and energy, the export of natural gas and butanes and the import of natural gas and exemption orders, the latter relating to the construction of pipelines or branches or extensions not exceeding 25 miles in length. The Board issued 521 orders relating to protection and safety in pipeline operations and carried out numerous field inspections concerning the pressure-testing of new gas and oil lines, the re-testing of existing pipelines, the internal sandblasting of portions of pipeline to effect a decrease in frictional resistance, and the testing of gas compression and oil-pumping facilities and other installations. The financial aspects of operations of pipeline companies under the Board's jurisdiction received continual scrutiny, and general surveillance was maintained over rates, tolls and tariffs. No requests for public hearings on rate matters were received during the year but studies were initiated relating to the development of rate regulatory procedures.

In the performance of its obligations in 1966, the Board carried out a number of special studies and maintained liaison with other responsible authorities. The development of the Canadian long-term energy forecast continued throughout the year and up-to-date estimates of reserves and producibility for crude oil, natural gas and natural gas liquids were maintained. The Board co-operated in the study of the coal industry in Nova Scotia and a number of studies were continued or started during the year in the field of electric power, particularly with respect to the avoidance of large-scale power failures, the development of the Lower Nelson River, the possible development of the upper reaches of the St. John River in the State of Maine, and the interconnection of electric power systems in Canada. It acted in an advisory capacity in the work associated with the decision to install a thermal-electric generating unit at the Trenton Plant of the Nova Scotia Power Commission and with the installation of power cables on the Prince Edward Island-mainland causeway. The Board continued to co-operate in energy matters with the Canadian Standards Association in the preparation of standard codes for the design, construction and operation of pipelines, with the National Harbours Board and the Canadian Transport Commission in the design of specialized pipeline facilities for use on locks and in railyards, and with several departments of Government in the preparation of pipeline and electric power transmission maps. Research operations included the investigation and development of computer applications in the study of electric power systems.

Trade Standards.*—The Standards Branch of the Department of Trade and Commerce consolidates under one Director the administration of the National Trade Mark and True Labelling Act, the Precious Metals Marking Act, the Weights and Measures Act, the Electricity Inspection Act, and the Gas Inspection Act.

Commodity Standards.—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. This is exemplified in the National Trade Mark Garment Sizing Regulations which were passed on Mar. 16, 1961. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

* Revised by the Standards Branch, Department of Trade and Commerce, Ottawa.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada or for which application for registration has been made must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act.

Weights and Measures.—The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada; it also requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed toward the elimination of sales by short weight or short measure. During 1966, 682,620 prepackaged articles were checked for weight or measure and 455,672 inspections of devices were made.

Electricity and Gas Inspection.—Responsibilities of the Standards Branch, under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 20 districts for administration of the two Acts and the staff numbers 217. During the year ended Mar. 31, 1966, 1,425,479 meters were tested. In 1965, there were 6,137,398 electricity meters and 1,652,840 gas meters registered in Canada.

*Patents.**—Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

5.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1962-66

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to 24,241 in the year ended Mar. 31, 1966. Roughly, 68 p.c. of the patents granted resulted from inventions made by residents of the United States, 8 p.c. by residents of Britain and other Commonwealth countries and 5 p.c. by residents of Canada. Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1845 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Egypt, Germany, Ireland, Colombia, Czechoslovakia and Yugoslavia.

* Revised by the Commissioner of Patents, Ottawa.

Copyrights, Industrial Designs and Timber Marks.*—Copyright protection is governed by the Copyright Act (RSC 1952, c. 55) in force since 1924. Protection is automatic without any formality. However, a system of voluntary registration is provided. Application for registration should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Canada belongs to the Universal Copyright Convention. This means that the works of Canadian authors are protected in the United States without the formality of compulsory registration or the obligation of printing in the United States, provided that, from the first publication, the work bears in a prominent place the following identification: ©, followed by the name of the proprietor and the year of publication.

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States. Protection of industrial designs and of timber marks is afforded under the Industrial Design and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office.

Trade Marks.†—The Trade Marks Office, a Branch of the Department of the Registrar General of Canada, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Union Label Act and the Shop Cards Registration Act. Correspondence relating to an application for registration of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

Applications are advertised for opposition purposes in the *Trade Marks Journal*, a weekly publication that also gives particulars of every registration of a trade mark and every registration of a registered user. The required fee payable on application for registration of a trade mark is \$25, for advertisement of an application \$15 and for registration of a person as a registered user of a trade mark, \$20.

* Revised by the Commissioner of Patents, Ottawa.

† Revised by the Registrar of Trade Marks, Department of the Registrar General of Canada, Ottawa.

Subventions and Bounties on Coal.*—A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals by equalizing as far as possible their laid-down costs with the laid-down costs of imported coals in various market areas. Since 1963, an addition to subvention regulations has also enabled eastern Canadian coals to be made competitive with imported residual fuel oils in the Atlantic Provinces and the Province of Quebec. Subvention assistance is authorized by Parliamentary vote and payments are administered in accordance with regulations established by Orders in Council.

* Revised by the Dominion Coal Board, Ottawa.

8.—Expenditure for Coal Subventions, by Province, 1962-66

NOTE.—Tonnes and expenditures shown in a given year, being on a calendar-year basis, are not necessarily in direct relationship; certain of the amounts include adjustments on movements of previous years.

The Canadian Coal Equality Act (RSC 1952, c. 34), which implemented one of the recommendations of the Royal Commission on Maritime Claims (1926), was designed to assist the Canadian steel industry and only incidentally affects coal. It provides for the payment of 49.5 cents per ton on bituminous coal mined in Canada and converted into coke to be used in the Canadian manufacture of iron and steel. Bounties paid under this authority for the years 1962-66 were as follows:—

Item	1962	1963	1964	1965	1966

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

Two series of figures are included in this part which, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures. The first, under the heading of "Administration of Bankrupt Estates" is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act); it gives information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in the second section under the heading of "Returns under the Bankruptcy and Winding-Up Act" which is compiled by the Dominion Bureau of Statistics. This series is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) and, since 1955, includes business failures only (see p. 934). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

Administration of Bankrupt Estates.*—The Bankruptcy Act, which was last revised in 1949, was amended by SC 1966, c. 32. These amendments were instigated by recent exposures and suggestions of illegal and improper practices in connection with bankruptcy proceedings or administration. They do not constitute a complete revision of the Bankruptcy Act but were rather designed to provide, as an interim measure, remedies to the most urgent areas of complaints. They provide the Superintendent of Bankruptcy with direct and immediate authority in the field of investigation and inquiry, and tighten the procedures and requirements in a number of areas, such as that of proposals which an insolvent person may make to his creditors. In other words, these amendments were intended to provide remedies in situations where it had been shown by experience that abuses of the bankruptcy process are most likely to occur. The amendments also contain a new Part X entitled "The Orderly Payment of Debts" which may come into force in any province at the request of the provincial authorities concerned. This part came into force in Alberta on Apr. 17, 1967, and in Manitoba on June 1, 1967.

* Prepared by the Superintendent of Bankruptcy, Ottawa.

PART IV.—PRICES*

Section 1.—Index Numbers of Wholesale Prices

The term "wholesale prices" refers to transactions that occur below the retail level. It has more of a connotation of bulk purchase and sale than of any homogeneous level of distribution. Wholesale price indexes and individual price series have numerous uses, one of the most important of which is in escalator clauses of contracts where prices quoted are linked to movements of specified price indexes. They are also of major importance in studies of replacement and construction costs in investment projects; analyses of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuations for tax purposes and inventory analysis; and studies of changes in physical volume. Foreign companies also utilize the indexes in assessing the competitive position of Canadian goods.

General Wholesale Index.—The general wholesale index mainly includes manufacturers' prices but also incorporates those of wholesalers proper, assemblers of primary products, agents and operators of other types of commercial enterprises which trade in commodities of a type, or in quantities characteristic of primary marketing functions. Prices are grouped according to a commodity classification scheme based on chief component material similarities. Indexes classified according to degree of manufacture are also available. In Table 1, the general wholesale index is presented for the period 1939-66. This index is used as a conventional summary figure against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials, for which separate price indexes have been constructed. Table 2 gives, for the years 1957-66, the general wholesale price index and two of its integral classifications—raw and partly manufactured goods, and fully and chiefly manufactured goods; also presented are two

* Prepared in the Prices Division, Dominion Bureau of Statistics.

related systems—industrial materials and Canadian farm products. Annual price index numbers of non-residential building materials and residential building materials are given for 1957-66 in Tables 3 and 4, respectively; during 1966 the price samples of both of these indexes were overhauled and the price indexes given for that year are on the new sample basis.

In addition to the summary tables presented in this Section, DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002) contains indexes of principal component groups of the wholesale price index. Other industrial price indexes included in the publication are: monthly selling prices of about 100 Canadian manufacturing industries, including commodity details; a system of annual bid price indexes relating to highway construction in which price movements are shown for completed units of work such as earth excavation and crushed gravel put in place; and price indexes for construction of transmission lines, distribution systems and transformation and switching stations of electrical utilities, based on labour, material and capital inputs into these facilities. (See also DBS publications, Catalogue Nos. 62-616, 62-520 and 62-526, respectively.) The monthly DBS publication *Prices and Price Indexes* also contains current series on retail price indexes and security prices indexes covered in Sections 2 and 4 following.

1.—General Wholesale Index Annual Averages, 1939-66

(1935-39=100)

Year	Average	Year	Average	Year	Average	Year	Average
1939.....	99.2	1946.....	138.9	1953.....	220.7	1960.....	230.9
1940.....	108.0	1947.....	163.3	1954.....	217.0	1961.....	233.3
1941.....	116.4	1948.....	193.4	1955.....	218.9	1962.....	240.0
1942.....	123.0	1949.....	198.3	1956.....	225.6	1963.....	244.6
1943.....	127.9	1950.....	211.2	1957.....	227.4	1964.....	245.4
1944.....	130.6	1951.....	240.2	1958.....	227.8	1965.....	250.4
1945.....	132.1	1952.....	226.0	1959.....	230.6	1966.....	259.5

The general wholesale index in 1966 registered the sharpest annual increase since the beginning of the expansion in economic activity in 1961. The average annual level, at 259.5, was 3.6 p.c. higher than the 1965 index. Increases were recorded by all the principal components; animal products led with a rise of almost 10 p.c. and non-ferrous metals and vegetable products also recorded increases higher than the average general wholesale index rise. The upward movements in animal and vegetable products were reflected in the sharper increase in the raw and partly manufactured goods index (5 p.c.) than in the fully and chiefly manufactured goods index (2.9 p.c.). The main increases in the raw and partly manufactured goods index came in the early and the closing months of the year with relative stability in the mid-year months; the fully and chiefly manufactured goods index, on the other hand, rose throughout the first three quarters of the year and levelled off in the final quarter. The impressions gained from these average annual movements were confirmed by the rise of 3.6 p.c. in the price index for Canadian farm products, as opposed to the 1-p.c. rise in the special-purpose industrial materials index. (The farm products index is preliminary, pending farmers' receipts of final payments by the Canadian Wheat Board.)

As shown in Tables 3 and 4, the price indexes of non-residential and residential building materials rose by 2.9 p.c. and 3.7 p.c., respectively, in 1966.

Section 2.—Consumer Price Index*

The purpose of the consumer price index is to measure the movement from month to month in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. For a particular article or service, a price index number is simply the price of the article in one period of time expressed as a percentage of its price in a reference period, usually called a base period. However, indexes for individual goods

* A comprehensive description of the index is contained in the publication *The Consumer Price Index (1949=100)*—Revision Based on 1957 Expenditures (Catalogue No. 62-518).

may be combined to form indexes representing prices of broad groups of goods and services. Thus, the consumer price index relates to the wide range of goods and services bought by Canadian urban families. The index expresses the combined prices of such goods each month as a percentage of their prices in the base period 1949.

The group of goods and services represented in the index is called the index "basket" and "weights" are assigned to the price indexes of individual items for purposes of combining them into an over-all or composite index. The weights reflect the relative importance of items in expenditures of middle-size urban families with medium incomes. The basket is an unchanging or equivalent quantity and quality of goods and services. Only prices change from month to month and the index, therefore, measures the effect of changing prices on the cost of purchasing the fixed basket. The basket and weights now used in the index are based on expenditures in 1957 of families of two to six persons, with annual incomes of \$2,500 to \$7,000, living in cities of 30,000 population or over.

6.—Consumer Price Index Numbers, 1940-67

1946.....	77.5	1953.....	115.5	1960.....	128.0	1967.....	149.0

The behaviour of the consumer price index during the years of almost continuous economic growth following the end of the Second World War up to 1959 is discussed in the 1962 Year Book at pp. 928-929 and the movement during 1959-65 in subsequent editions. Between 1965 and 1966 the rate of consumer price rise advanced, averaging 3.7 p.c., with the largest increases occurring in food (6.3 p.c.), clothing (3.8 p.c.) and health and personal care (3.1 p.c.). In 1967 the upward trend continued with prices averaging 3.5 p.c. higher than the previous year. The largest increases occurred in health and personal care (5.1 p.c.), recreation and reading (5.1 p.c.), clothing (5.0 p.c.) and food (1.3 p.c.).

Consumer Price Indexes for Regional Cities.—Table 9 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparisons. Their function is to measure percentage changes in retail prices—over a certain time in each city or city combination—of a fixed basket of goods and services representing the level of consumption of a particular group of families.

World Retail Price Indexes.—In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table 10 provides consumer price indexes for selected countries for 1964, 1965 and 1966. These indexes measure price changes only within each country and should not be used to compare actual levels of living costs from country to country.

Section 3.—Consumer Expenditure

A continuing program of surveys of family expenditure in urban areas was begun in 1953, and surveys were conducted since then at two-year intervals up to and including 1959. No expenditure surveys were taken in 1961, the decennial census year, but the regular program was resumed in 1962 when monthly surveys of food expenditure were

made throughout the year and a recall survey of the complete budget was made in February and March 1963. Early in 1965 a recall survey of the complete budget was made, referring to the calendar year 1964.

The primary purpose in most of these surveys was to collect information for reviewing and revising, when necessary, the weights of the consumer price index. Therefore the surveys, with the exception of those for 1959 and 1964, were restricted to cover only the families comparable in composition and income level to the consumer price index target group which was selected for index number purposes from a nation-wide survey conducted in 1947-48. For each of the four survey periods covering 1953, 1955, 1957 and 1962, respectively, the program consisted of a series of monthly surveys in which the major objective was the collection of detailed expenditure data on food, followed by a recall survey of all expenditures and income for the same calendar year. Detailed results for each survey have been published in two series of occasional publications of which the latest are: *Urban Family Food Expenditure, 1962* (Catalogue No. 62-524) and *Urban Family Expenditure, 1962* (Catalogue No. 62-525).

In the 1959 and 1964 survey programs the monthly surveys were omitted and the recall surveys were enlarged in size and scope, referring in 1959 to all families and individuals in cities with populations of 15,000 or over, and in 1964 to all families and individuals in eleven cities. The decision to limit the sample in 1964 to selected major cities was based on the desire to produce representative data for individual cities, in contrast to the broader regional representation afforded by the 1959 survey. Summary results of the 1959 survey appear in the 1962 Year Book at pp. 934-937, and of the 1964 survey in the 1966 Year Book at pp. 947-949. Detailed results for these two surveys are published in *Urban Family Expenditure, 1959* (Catalogue No. 62-521) and *Urban Family Expenditure, 1964* (Catalogue No. 62-527).

The next survey will be made early in 1968 to cover the calendar year 1967.

Section 4.—Security Price Indexes

Security price indexes measure, through time, the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on the Toronto, Montreal and Canadian stock exchanges. In the case of the mining and the two supplementary indexes (primary oils and gas, and uraniums), eligible issues are for producing mines and wells only. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the weekly common stock indexes (investors, mining and supplementary indexes) are Thursday's closing quotations. For the monthly preferred stock indexes, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The indexes express current prices as a percentage of prices in 1956. Monthly and certain weekly indexes appear in the DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002) and a weekly DBS report gives indexes on a weekly basis for all groups and sub-groups.

The investors index is comprised of three major groups, with relative importance indicated by percentage weights as follows: industrials, 67.5; utilities, 18.6; and finance, 13.9. Each major group is further divided into industry sub-groups corresponding to the standard industrial classification, adopted as the basis of classification in the revision of the index to the 1956=100 base. The mining index is composed of two groups: base metals with a weight of 64.6 p.c. and golds with a weight of 35.4 p.c. The two supplementary indexes of common stocks—primary oils and gas, and uraniums—and the index of preferred stocks are not divided into component groups.

SECTION 5. TRADE BY SECTION AND STAGE OF FABRICATION.....	975		

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

The subject of foreign trade covers more than the treatment of exports and imports of commodities, important though this is. In its broader sense, foreign trade is made up of the total international interchange of goods, services, securities and other financial transactions, all of which are presented in their appropriate relationship in this Chapter and in Section 4 of Chapter XXIV. Part I contains specially prepared information on the Kennedy Round of trade negotiations and the impact of their implementation on Canada's external trade. Part II gives detailed statistics of that trade. Part III outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure. Part IV contains a review of the extent of travel between Canada and other countries in 1966, with estimates of the amount of money expended for that purpose.

PART I.—CANADA'S INTERNATIONAL TRADE AFTER THE KENNEDY ROUND OF TRADE NEGOTIATIONS*

In a situation where every country has offered every other country some reciprocal concessions, it is difficult to say what shape and form the Canadian external trade picture is likely to assume after the tariff reductions agreed upon at the Kennedy Round of trade negotiations have been fully implemented. The problem is far more complex than simple arithmetic, adding a quantity here and subtracting a quantity there. Analyzing the precise implications for Canada's trade is all the more difficult when one considers that the concessions will not have been implemented in full until Jan. 1, 1972.

One of the principal objectives of the General Agreement on Tariffs and Trade (GATT), which was negotiated among 23 trading nations including Canada at Geneva in 1947 and put into operation in 1948, is the liberalization of international trade through

* Prepared (February 1968) by G. A. Richardson, Director, External Trade Division, Dominion Bureau of Statistics.

reduction of tariff and non-tariff barriers to the expansion of trade. To this end, six rounds of multilateral trade negotiations have thus far been held under GATT arrangements. The net result of the first five rounds of tariff negotiations conducted under the aegis of the GATT between 1947 and 1962 was an appreciable reduction in some 60,000 tariff rates applied at the end of the Second World War by countries accounting for about 80 p.c. of world trade.

Approach to the Kennedy Round

All the first five rounds were conducted between pairs of countries negotiating reductions on tariffs on specific commodities. The tariff concessions agreed to were automatically extended to all other GATT members under its "most-favoured-nation" clause.* The scope for negotiations on this basis had been nearly exhausted and it was felt that a new basis for future trade negotiations might be linear or "across the board" cuts to be offered by participating countries.

The Kennedy Round was largely a United States initiative. The movement of the European Economic Community (EEC)† toward a common external tariff was exercising increasing discrimination against United States exports.‡ There was also an added threat to the United States agricultural exports posed by the common agricultural policy of the EEC. Another inducement for linear cuts came from the United States Trade Expansion Act of 1962 which replaced the Trade Agreements Act of 1934. Under this new legislation, the President of the United States was empowered to make linear cuts of up to 50 p.c. in United States tariff rates existing on July 1, 1962, and also to abolish duties on tropical products and those that were, on that date, 5 p.c. or less.

Terms of Reference

The stage then for the sixth round of negotiations was set at the GATT Ministerial Meeting in May 1963 when it was decided that comprehensive negotiations, with the widest possible participation, should begin in May 1964, to be conducted on the principle of reciprocity and covering all classes of products, industrial as well as non-industrial. A linear cut of 50 p.c. in tariffs formed the working hypothesis, subject to over-all reciprocity. Both tariff and non-tariff barriers to trade came under study. A number of industrial countries including the United States, Britain, the EEC and Japan adopted the linear approach, and terms of reference included special measures for the reduction of trade barriers to the exports of the less-developed countries, without insisting upon reciprocity.

Canada's Approach

It was recognized from the start that equivalent percentage reductions in tariffs would give a greater advantage to countries with a wider spread of, and higher, tariff rates, and that the working hypothesis of 50-p.c. linear cuts would not be appropriate in all cases on account of the special features of the economies of the countries concerned. This was especially true of Canada, a large proportion of whose exports consist of food-stuffs and primary products with already low tariffs. It was agreed, therefore, that Canada fell in the second category of countries which should offer tariff concessions equivalent, in effects on trade, to the benefits received. These countries, which also included Australia, New Zealand and South Africa, thus adopted the selective approach.

Negotiations and Results

Negotiations began in May 1964. Forty-seven countries, including the six EEC countries bargaining as one unit, all the major trading nations and some 30 less-developed countries, participated. These countries account for around 80 p.c. of world trade. Many difficulties were encountered and progress at times was slow but essential elements

* These concessions were also extended to those countries with which, even though they were not contracting parties to GATT, "most-favoured-nation" terms were exchanged under bilateral trade arrangements.

† Belgium, France, the Federal Republic of Germany, Italy, Luxembourg and the Netherlands.

‡ The common external tariff is scheduled to come into effect on July 1, 1968. It is based on the arithmetical average of the duties applied by member countries on Jan. 1, 1957, and will be applicable to all imports from outside countries.

of the Kennedy Round were finally negotiated by May 15, 1967. The new tariff schedules were signed and announced June 30 when the authority granted to the United States President under the Trade Expansion Act of 1962 was due to lapse.

Two time-tables for implementation were agreed to. The first involves tariff cuts in five equal annual instalments beginning Jan. 1, 1968 and ending Jan. 1, 1972, as provided under the United States Trade Expansion Act. The second time-table meets the convenience of the EEC, which makes a final move to the common external tariff on July 1, 1968. In the latter case, 40 p.c. of the agreed cuts would be implemented on July 1, 1968 and the remaining 60 p.c. in three equal annual instalments beginning Jan. 1, 1970 and ending Jan. 1, 1972. The final and complete adjustments to new tariff levels for all industrial countries would thus come on Jan. 1, 1972.

The agreement includes tariff concessions covering about \$40,000,000,000 (U.S.) of world trade in 1966 terms. The United States offered concessions on approximately \$8,500,000,000 of its imports. There will be an estimated reduction of 35 p.c. in duties by 37 countries accounting for about 75 p.c. of world trade. Average tariff reductions will amount to 38 p.c. in Britain, 35 p.c. in the United States and in the EEC, 30 p.c. in Japan and 24 p.c. in Canada, although reductions on many industrial products will be as much as 50 p.c.

Essential Features

There are four basic elements of the Kennedy Round agreement. The *first* involves the most far-reaching tariff cuts in the 20-year history of the GATT. After full implementation, the average level of duties in the United States, Britain and the EEC will be in the range of 6½ to 8½ p.c., compared with 12 to 18 p.c. prior to the agreement. It is true that the concept of average (in the sense of a simple arithmetic average of tariff rates) can be misleading in that it may conceal important factors such as the high tariff rates on commodities important in trade. On the other hand, low rates of duty on even a large number of unimportant commodities are hardly conducive to the expansion of trade since the duty element in trade in such commodities is insignificant. Nevertheless, it provides a measure of the broad magnitudes and serves to show that the resulting tariff levels on most manufactured goods in the EEC, Britain and the United States will probably cease to constitute any significant barrier to trade.

The *second* important element involves negotiations in the field of agriculture where higher minimum and maximum prices have been negotiated for wheat. This constitutes an important concession by large importing countries like Britain and Japan to such wheat exporters as Canada and Australia. Considering the difficulties involved in working out realistic quality-price relationships under the old International Wheat Agreement, agreement on this point constitutes a major advance. Another important feature lies in the fact that a program of food aid to developing countries has been written into the structure of the new agreement under which all developed countries,* whether exporters or importers of wheat, will make agreed contributions to a 4,500,000 metric ton annual food aid program.

The *third* element is the conclusion of a new anti-dumping code† which provides adequate safeguards for the legitimate interests of foreign exporters and of domestic producers by securing application of the principles already laid down in the GATT.

The *fourth* element was the inclusion, for the first time, of negotiations on non-tariff barriers to trade. The most important point here was the American Selling Price (ASP) system on benzenoid chemicals under which duty is calculated on the wholesale price of the domestic product rather than on the landed cost of the imported product, resulting in considerably higher duty.‡ The EEC, which took special objection to this system,

* The United States, the EEC, Canada, Australia, Britain, Japan, Sweden, Switzerland, Denmark, Norway and Finland. The United States share of the annual contribution will be 42 p.c., that of the EEC 23 p.c. and of Canada 11 p.c.

† To come into effect July 1, 1968.

‡ This system has been in operation under legislation adopted in 1922 when the United States chemical industry was still in an "infant" stage.

agreed to an unconditional cut of 20 p.c. in response to a 50-p.c. cut by the United States. It also offered a further reduction of 30 p.c., should the United States Congress repeal the ASP system. Conditional on this, Belgium, France and Italy agreed to modify "road-use" taxes, which tended to discriminate against cars with larger engines, and Britain agreed to reduce its margin of preference on tobacco imports.

Although the gains from the Kennedy Round in the direction of trade liberalization are larger than any made during the past two decades, the tariff reductions do not cover all products and are relatively small for some. There are many commodities (heavy trucks and aluminum for the EEC and crude oil for the United States, among others) on which tariffs are not being cut at all. There are many others (cotton textiles and leather products) on which reductions are relatively small. Again, there remains a whole set of non-tariff barriers to trade, such as special administrative provisions, quota requirements and others, which are no less an obstacle to trade than the tariff rate structure itself. Thus, despite substantial gains in many areas, the Kennedy Round has not ushered the world economy on to the threshold of a millennium of completely free trade.

Implications for Canada's Trade

What do the Kennedy Round results mean for Canada's external trade? It is possible to answer this question only in very general terms. For one thing, the event is still too recent to permit assessment of its full implications. Secondly, the agreements will become effective only gradually over the next four years,* so that final adjustments will not take place before Jan. 1, 1972. Thus, Canadian industry has four years to make any necessary adjustments which, for a technologically advanced country like Canada, should be adequate.

There are, however, other problems involved in the precise assessment of the impact that the Kennedy Round might have on Canada's trade. The concessions that Canada has received are also available to third countries under the most-favoured-nation clause of the GATT. Even if equal tariff cuts had been made by all (which is by no means the case), the effects on trade of these cuts would be different for different countries because of various factors influencing the results, such as short-run effects as contrasted to long-run effects, the level of the original tariff, the changes made in the rates of tariff, the demand and supply elasticities, the elasticity of substitution between domestic and foreign goods, the quality changes that occur, changes in tastes and preferences of consumers, technological changes, the degree of competition, the production mix and the scale of operations.†

It is difficult to say then with any degree of certainty what will happen with respect to each industry and each commodity. The whole problem can best be viewed in the context of both the opportunity and the challenge that the Kennedy Round offers to the Canadian economy in general and the export industries in particular. There is no doubt that a general lowering of trade barriers—tariff as well as non-tariff—is in the interest of the world as a whole to the extent that it will help expand trade.

Impact on Exports to the U.S.‡—Of the \$3,000,000,000 of Canada's export trade to benefit from the Kennedy Round tariff reductions, almost two thirds is with the United States. Duties, now 5 p.c. or less, will be abolished on \$557,600,000 of Canadian exports. Of this, \$387,100,000 pertains to the lumber and paper group, \$91,500,000 to the fisheries products group, \$28,600,000 to agriculture and \$50,400,000 to other products. A 50-p.c. reduction will be made on exports of \$1,060,000,000 and smaller reductions on another \$298,300,000.

* Canada and the United States made their first of five equal annual reductions Jan. 1, 1968; the EEC, Japan, Britain and other European countries begin July 1, 1968, with two fifths of the agreed reduction.

† It may be well to note here that even though the percentage cuts in the tariffs of the countries concerned are not the same, they are applicable in equal measure to all countries eligible for most-favoured-nation treatment. Similarly, the period allowed for adjustment to change is also generally the same for all countries although in this case two slightly different time schedules have been provided for.

‡ The export figures mentioned in this section are based on United States imports from Canada in 1966 (the last complete year before the agreement) and are in U.S. dollars. Source: *Foreign Trade*, July 1, 1967, Department of Trade and Commerce, Ottawa.

Nickel worth \$175,500,000 will continue to enjoy the present temporary free entry. Items valued at \$45,800,000, not previously bound, are also being bound free.* In the field of agricultural products, 50-p.c. duty reductions will apply to exports of about \$65,000,000 and duty will be eliminated on another \$28,600,000. Duty will be eliminated on fisheries products exports worth \$91,500,000 and reductions, generally of the order of 50 p.c., are to be made on a further \$740,000. This covers about 76 p.c. of Canadian dutiable exports of fisheries products to the United States.

Lumber exports (\$383,900,000) will move into the United States duty-free. Tariffs will be reduced by half to a 7½-to-10-p.c. range for some \$11,200,000 of wooden doors, prefabricated wooden building, birch plywood, particle board, furniture parts and wooden building components. The duty on maple and birch veneer (\$27,000,000) will be halved to 4 p.c. With pulp and newsprint already free of duty, the United States agreed to a 50-p.c. reduction on paper and paper products, valued at \$34,400,000.

Duties were also reduced on chemicals exports valued at \$95,000,000. On synthetic rubber (\$19,000,000), the largest single item in this group, duty is to be reduced from 6½ to 3 p.c. Carbon, carbon black, salt, and dicyandiamide (\$9,900,000) are to enter duty-free. Duties would be cut in half on most other chemicals of interest to Canada. If the ASP system of valuation is repealed by the United States, this would not only mean a greater than 50-p.c. reduction in United States tariffs but might encourage the long-run development of the United States market for Canadian chemicals.

In the iron and steel group, the principal reductions affecting exports of \$94,800,000 will be in the alloy steel field, with smaller reductions in ordinary steels. For other items, such as pig iron and sponge iron (\$22,100,000), current duties of less than 1 p.c. will be eliminated. In other metals, a 20-p.c. tariff reduction will be made on aluminum ingot (\$174,000,000) and a corresponding 20-p.c. reduction in the main semi-fabricated products. In the field of non-metallic minerals, Canadian exports of cement and lime worth \$8,300,000 in 1966 will be free and a 50-p.c. reduction will benefit other exports in this field amounting to \$10,500,000. Duties will be eliminated on cadmium and bismuth and 50-p.c. reductions will apply to copper, molybdenum, magnesium and indium, and copper semi-fabricated products, benefiting Canadian exports of \$122,100,000.†

In the manufactured goods sector, Canadian exports of \$700,000,000 will benefit from a 50-p.c. reduction, except in the case of textiles (a 20-p.c. reduction) and some leather products where the reductions will be smaller. In this sector there are many products of particular interest to Canadian industry where the prospects for increasing exports to the United States will improve as reductions are fully implemented.

Reduced Preference in Britain.—Although about 95 p.c. of Canada's exports to Britain are already duty-free, 60 p.c. of them have to compete with imports from other countries, also enjoying free access to the British market.

As noted earlier, Britain offered an average reduction of 38 p.c. in its most-favoured-nation rates of duty, which would result in some reduction in the margin of preference enjoyed by Commonwealth exports to Britain. However, Britain has agreed to readjust Commonwealth exports of products subject to preferential rates of duty so as to maintain the existing ratios of preference enjoyed by Commonwealth countries. Nevertheless, there will be some reduction in the margin of preference that Canadian products have enjoyed over the products of countries to whose exports to Britain the most-favoured-nation rates apply.

Concessions by the EEC.‡—Over-all tariff reductions will average about 30 p.c. on Canadian exports to EEC countries; these were valued at \$160,000,000 in 1966,

* A bound rate of duty is a rate which the country concerned undertakes not to increase. In this case, it means that the United States has undertaken not to impose duty on the items that have been bound free.

† The United States duty on copper is at present (February 1968) temporarily suspended.

‡ The figures in this section are in Canadian dollars. Source: *Foreign Trade*, July 1, 1967, Department of Trade and Commerce, Ottawa.

excluding wheat exports of \$144,000,000 covered by the new agreement on cereals. Of the non-wheat exports, 50-p.c. reductions will apply to \$37,000,000 worth of Canadian exports, and smaller reductions to the remaining \$123,000,000.

In the agriculture and fisheries groups, Canadian exports worth about \$22,000,000 (excluding wheat) will benefit by varying rates of reduction. Several important agricultural exports to EEC countries, notably oil seeds, already enjoy duty-free entry. In lumber, pulp and newsprint products, the most important reduction by the EEC is in non-newsprint paper (\$9,000,000 in 1966). The reduction in duty on wood pulp will amount to 50 p.c. in addition to the current duty-free annual quota of 1,900,000 metric tons. An annual duty-free quota of 625,000 metric tons will be introduced for newsprint where the rate will continue to be 7 p.c. for exports in excess of quota.

Some \$5,000,000 of iron and steel exports will benefit from slight reductions in tariffs, mainly pig iron, hot-rolled steel rods, structural shapes and sheet piling, and sheets and strips. Canadian textile exports worth \$3,000,000 will receive more than 30-p.c. reductions in EEC tariffs, mainly synthetic fibres, wool papermakers' felts, and mixed fabrics. Dressed furs and fur apparel, valued at \$2,400,000, will enjoy an almost 50-p.c. reduction. Chemicals, valued at \$11,000,000 in 1966, will be affected by an unconditional 20-p.c. reduction in duties and an additional 30-p.c. reduction if the United States abolishes its ASP system of valuation.

In the non-ferrous metals and metal products group, while the EEC made no tariff concession on aluminum from the present rate of 9 p.c., it agreed to establish a bound 5-p.c. annual tariff quota of 130,000 metric tons. There will be reductions of about 20 p.c. on the main semi-fabricated aluminum products (\$1,200,000) and similar reductions in duties on copper bars, rods and other shapes. Duty on magnesium (\$1,200,000) will be reduced from 10 to 8 p.c. and on nickel anodes from 5 to 4 p.c.

Canadian exports of manufactured goods to the EEC, about \$54,000,000 in 1966, are small but growing. Tariffs in this sector will be reduced in general by 50 p.c. to a range of 5 to 8 p.c., benefiting particularly a variety of machinery products such as excavating, agricultural, printing, textile and pulp and paper machinery, electrical equipment and parts including parts of communications equipment, electric wire resistors and spark plugs, ground flying trainers, aircraft equipment and parts. Reductions in the case of computers and card punching machines, radar equipment and chain saws will be smaller.

Tariff Reductions by Japan.*—The most prominent export item in trade with Japan is wheat which amounted to \$90,000,000 of the total dutiable Canadian exports of \$177,000,000 in 1966. Japan is a party to the memorandum of agreement on cereals. Other exports (\$35,000,000) on which Japan has agreed to reduce duties at varying rates include aluminum, copper waste and scrap, newsprint, liquefied petroleum gases, beef tallow and salmon roe. There will be a 50-p.c. reduction in duties on a variety of fully manufactured goods. In addition, a large proportion of Japanese tariff rates will now be bound.

Major Concessions by Nordic Countries.—The four Nordic countries (Norway, Sweden, Finland and Denmark) which negotiated as a unit at the Kennedy Round, are, along with Switzerland, regarded as low-tariff countries. Tariff reductions offered by them will benefit Canadian exports, worth about \$13,000,000 in 1966. Over half of the \$31,000,000 exports to Switzerland will be similarly benefited by Swiss reductions. In some cases (wood pulp), Canadian producers will now be able to compete more effectively with the EFTA countries.

* The figures in this section, in Canadian dollars, are based on Japanese imports from Canada in 1966. Source: *Foreign Trade*, July 1, 1967, Department of Trade and Commerce, Ottawa.

Concessions Made by Canada.*—It has been noted that Canada did not adopt the linear approach to the trade negotiations, but undertook to offer concessions equivalent in terms of their impact on Canadian trade to those offered by other countries. The concessions made by Canada cover some \$2,500,000,000 worth of imports in 1966 terms and, as a result, the general pattern and structure of the Canadian tariff between now and 1972 will be simplified and improved. Import duties† of 20 p.c. or more will now be rare. Rates on final manufactures will generally be in the range of 17½ to 20 p.c. Those on production machinery and producers' equipment will be around 15 p.c. On intermediate products, the rates will be 15 p.c. or less, while some basic materials will be free or almost free.

Duties will be reduced or eliminated on a number of tropical products, both as a measure of assistance to the developing countries and in order to give relief to the Canadian consumer in terms of reduced prices. Likewise, duties will be reduced or removed on a number of agricultural products which will move freely between the United States and Canada. Free entry will now be allowed into Canada in the case of fresh, frozen, dried and pickled fish, including shrimp. There will be a 50-p.c. reduction on most prepared and canned fish. Fish oils will also be subject to reduced duties. A 50-p.c. tariff reduction will apply to unmanufactured Turkish tobacco, and some reduction is being made in the protective rates on cigars, cigarettes and cut tobacco. There is also a 50-p.c. reduction in the net protection element of the duty on whisky, gin, brandy and vodka.

Canadian rates of duty on lumber are being brought more into line with the United States rates. A number of items in the wood products group continue the existing provisions for free entry, and reductions from the present rate of 10 p.c. or more are being made in others. Significant reductions have been provided for in some items in the paper group. Reduced duties on earthenware and stoneware will assist the construction industry, and the consumer may benefit from reductions in tariffs on china, porcelain and semi-porcelain.

Substantial reductions have been made in duties on non-ferrous metals, with free entry for lead, zinc and copper in pigs, blocks and slabs. Reductions have been made also in duties on the manufactures of these metals. In iron and steel, duties are being removed on pig iron and ingots of iron or steel, with reductions on bars, rods, sheet and strips and plates of iron or steel, and on forgings, axles, chains, pipes or tubes, and for manufactures of iron or steel. Duties have been reduced or removed on wire and wire products.

The tariff structure with lower rates in respect of machines and related products has been simplified by the establishment of a single item for machines and control equipment in contrast to the earlier "class or kind made in Canada" concept. A Review Board would recommend full remission of duty for machines not available from indigenous sources. The effect of the remissions along with the new consolidated rate on machines will result in average duties of 9 p.c. or less. Duties are also being reduced on a range of related producers' equipment, such as engines, electric dynamos, generators, transformers, electric motors and insulators, and some dairy machinery, and eliminated on certain poultry-processing equipment, veneer-drying machines and some printing presses. There will be reductions in duties on other electrical and electronic equipment such as telegraph and telephone apparatus, batteries, radios, television sets and phonographs, and the general tariff item for electrical apparatus.

In the field of chemicals, Canada has undertaken not to levy duties above 15 p.c. ad valorem. The duty of 5 p.c. on fertilizers is being removed. On plastics, the rates will be no higher than 10, 12½, 15 or 17½ p.c., depending on the nature and degree of processing of the product. The reductions in duties on textiles agreed to by the industrial

* In Canadian dollars. Source: Department of Trade and Commerce, Ottawa.

† At most-favoured-nation rates, except where otherwise indicated.

countries are generally smaller. Canada made reductions generally by $2\frac{1}{2}$ percentage points, although in some cases reductions reached 5 percentage points and even (knitted goods) $7\frac{1}{2}$ percentage points. Some reductions were made in leather, less in the case of shoes and boots. There is a 50-p.c. reduction in duty on natural crude and synthetic rubber, bringing the rate down to $2\frac{1}{2}$ p.c. On rubber shoes and boots and on rubber manufactures including tires and tubes, the reductions are smaller. Lower duties on watches and cameras will also assist the consumer. Duties have also been reduced or eliminated on a number of miscellaneous products.

Impact on Imports.—Picking up the thread of the earlier argument about the possibility of expansion of Canadian exports as a result of the Kennedy Round, the implications of the reductions offered by Canada in import duties may now be considered. Although it is true that the level of protection to certain industries would be reduced, it is equally true that the cuts would result in imported materials being available at cheaper prices. This would help reduce costs where imported components are used in the production of goods. On the other hand, it will expose Canadian industry to increased foreign competition in the domestic market and could in some instances require it to reorganize production toward greater specialization, longer production runs and other economies of scale made possible by an expanding world market. Again, to the extent lower costs in imported materials are passed along, reduced prices will tend to increase domestic demand for the products of industry. Thus, both producers and consumers could in the long run gain from the lowering of duties.

It is true, of course, that the short-run effects of a reduction in duties are clearly different from the long-run effects. In the short run, a reduction may force an industry into losses and result in some unemployment. But, in the case of Canada at least, there appears to be little danger of any industry being wiped out, although some marginal units within an industry may be eliminated, permitting the re-allocation of resources to more productive uses. Thus, in the long run, intensified foreign competition could require progressive revisions in Canadian industry practices which would far outweigh the relatively minor adverse effects in the short run.

Export Potential.—The concessions that can accrue to Canada's export trade from the tariff reductions agreed to will apply to all most-favoured-nation countries, including some that are not party to the GATT. It follows that international competition for world markets will become more keen and every country will make vigorous efforts to take advantage of the Kennedy Round results.

With tariffs reduced on \$3,000,000,000 (almost a third) of Canadian exports, it is obvious that larger markets will now open up for Canadian industry. Almost \$2,000,000,000 worth of these exports go to the United States market and over half of this trade will benefit from a 50-p.c. reduction in rates. This will inevitably further increase trade with the United States, intensifying the existing trend of expanding trade to the south in a market itself ten times the size of the Canadian domestic market. Increased competition in the British market and the effect of reduced margins of preference in Britain will accentuate this trend. In addition, the Kennedy Round will open up, at least to a limited extent, the hitherto restricted EEC market. Gains can be expected also in the Japanese market and in that of the EFTA countries. Canadian exports in general have shown a highly encouraging degree of buoyancy, particularly in the 1960s, and have in recent years grown at a rate faster than that of world trade as a whole. If anything, reduced tariffs should accelerate this trend.

Conclusion

As already remarked, these gains should materialize if certain conditions obtain—important conditions on which could depend to a significant degree the success or failure

of the expected growth of Canadian exports. International competition for exports will be further intensified as a result of the Kennedy Round. It will be advantageous for Canadian industry to reorganize production to enable it to become more competitive. Some adjustment problems undoubtedly will have to be faced in the transitional phase but they should be taken care of by the Adjustment Assistance Programme* recently announced by the Prime Minister.

Canadian costs have been rising faster than those in the United States and some other countries, with rising wages an important factor. Current demands for wage increases and other benefits could push costs even higher. The gains from the Kennedy Round, therefore, will be eroded unless Canadian industry is able to increase its competitive strength through improvements in productivity. This is the best means of steadily expanding Canada's export markets and ensuring a rising standard of living for the Canadian people in whose economy foreign trade plays such a vital role. It is in this sense that the Kennedy Round is both an opportunity and a challenge for Canadian industry.

PART II.—FOREIGN TRADE STATISTICS†

Section 1.—Explanatory Notes on Canadian Trade Statistics

Sources.—Canadian foreign trade statistics are compiled from information recorded on customs documents received by the Dominion Bureau of Statistics from the various customs ports in Canada with the following exceptions: *electricity* exports are based on reports received from the National Energy Board and imports are based on reports received from public utility companies; and *crude petroleum exported by pipeline*, statistics for which are reported directly to the Bureau by the pipeline companies. Record is kept of value and, whenever possible, of quantity. In considering trade figures, it should be noted that the statistics do not necessarily reflect the financial transactions relating to the movement of goods since the method and time of payment are affected by many factors.

Coverage.—*Domestic exports or exports of Canadian produce* include exports of goods wholly produced in Canada together with exports of previously imported goods that have been changed in form by further processing in Canada. *Re-exports or exports of foreign produce* include previously imported goods that are exported from Canada in the same form as when imported. From January 1964, re-exports have also included exports from customs warehouses.

Imports, as from Jan. 1, 1964, include all goods cleared by customs immediately on arrival in Canada, plus goods entered into customs warehouses rather than cleared on arrival. For 1963 and earlier years, imports included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods entered into customs warehouses and then re-exported, but there may be an important difference in the time at which warehoused goods are recorded as imports; some shipments entering customs warehouses remain there for several months before clearance.

The most important exclusions from export totals are: current coin, gold, goods shipped to Canadian Armed Forces or diplomats stationed abroad, goods financed under the Defence Appropriation Act and shipped to other NATO countries, temporary exports for exhibition or competition, fuel and stores sold to foreign vessels and aircraft in Canada,

* This program seeks to provide suitable financial and technical support to firms and industries that require such support as the result of the problems created by the Kennedy Round and in order to increase their competitive strength in the world export markets.

† Based on statistical reports published by the External Trade Division, Dominion Bureau of Statistics.

settlers' effects, private donations and gifts, and identifiable tourist purchases—generally, all temporary exports and goods merely moving in transit through Canadian territory.

The most important exclusions from import totals are: current coin, gold, goods for use of the United States Armed Forces stationed at treaty bases in Canada, Canadian-owned military equipment returned to Canada, ships imported for use in foreign trade and ships of British construction and registry imported for use in the coasting trade, temporary imports for exhibition or competition, fuel and stores purchased by Canadian vessels and aircraft abroad, settlers' private donations and gifts, tourist purchases exempt from duty, and goods imported for foreign armed forces or diplomats stationed in Canada—generally, all temporary imports and goods merely moving in transit through Canadian territory.

Beginning Jan. 1, 1964, Canada's trade statistics are compiled on a "General Trade" basis instead of on the "Special Trade" basis used previously. The main difference for figures recorded on the General Trade basis is that imports are entered as such whether the goods are cleared through customs for immediate domestic use or stored in a customs warehouse. Domestic exports remain the same on both bases but re-exports, after Jan. 1, 1964, include exports from customs warehouses which were previously excluded. Over a period of years, the totals of Canadian exports or imports would be almost the same on either basis but considerable differences might appear in individual years because of time of clearance and extent of business activity.

From Jan. 1, 1960, a new category was established in both export and import statistics entitled "Special Transactions—Non-trade". This category includes certain commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of transactions of these types is now excluded entirely from published totals of Canadian merchandise trade and does not appear in this volume, but statistics for the classes of this category are contained in the regular monthly export and import reports.

Beginning with statistics for January 1961, a new export commodity classification was used, based on the Standard Commodity Classification developed by the DBS as a tool for integrating statistical series derived from different sources. Whereas the classification previously used classified commodities primarily according to the material of which they were chiefly composed, the new classification places commodities in sections mainly according to stage of processing and purpose, as follows: Live Animals; Food, Feed, Beverages and Tobacco; Crude Materials, Inedible; Fabricated Materials, Inedible; End Products, Inedible; and Special Transactions—Trade.

As from Jan. 1, 1964, a new commodity classification was also introduced for import statistics, based on concepts similar to those embodied in the export classification, so that there is now a closer approach to comparability between the two sets of statistics. As part of the change to the new classifications, the commodity detail shown in trade returns has been modernized by eliminating statistics on some commodities of minor significance and instituting new classes for many commodities of greater importance. The grouping system employed in the new classification also makes easier the identification of other commodities which may merit separate specification. For most of the commodities of greatest importance in Canadian exports, the classes of the new export commodity classification are substantially identical with those of its predecessor. The import classification is more extensive than the export classification and in its new form gives an up-to-date and comprehensive coverage of those commodities which constitute the bulk of Canada's import trade.

Valuation.—Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" (freight, insurance, handling, etc.). This definition would give values f.o.b. point of consignment for export

but in practice it is not always followed. For example, in recent years a significant but indeterminate proportion of exports has been reported in United States dollars, resulting in some overstatement of the value of exports for the period prior to June 1961 and some understatement of their value in subsequent years.

The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export but, at least in recent years, importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January 1959); raw cotton and crude petroleum (from January 1962, retroactive to January 1960); raw sugar (from January 1963, retroactive to January 1961); and all shipments individually valued at \$100,000 or more (from January 1964). Only about one fifth of the value of imports is covered by these specific checks.

Country Classification.—Trade is credited to countries on the basis of consignment. For exports from Canada, the country of consignment is that country to which goods are, at the time of export, intended to pass without interruption of transit except in the course of transfer from one means of conveyance to another. For imports into Canada, the country of consignment is the country from which the goods came without interruption of transit except in the course of transfer from one means of conveyance to another. This is not necessarily the country of actual origin, since goods produced in one country may be imported by a firm in another country and re-sold to Canada; in such cases the second country is the country of consignment to which the goods are credited. There is one exception to this rule; an attempt is made to classify by country of origin goods produced in South America, Central America, Bermuda and the Antilles and consigned to Canada from the United States. The effect of this procedure is to reduce slightly the imports credited to the United States and to increase those credited to South and Central American countries.

The country sub-totals include trade with Commonwealth and other countries entitled to Preferential rates of duty (the Republic of Ireland and the Republic of South Africa).

Discrepancies in Trade Statistics Between Canada and Other Countries.—Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Major factors contributing to these discrepancies include:—

- (1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
- (2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
- (3) Differing definitions of territorial areas.
- (4) Differing systems of crediting trade by countries, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
- (5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

Section 2.—Total Foreign Trade

In considering the figures in Sections 2 to 5, reference should be made to the explanatory notes on trade in Section 1. Exports and imports of gold are excluded from all tables.

1.—Value of Total Foreign Trade of Canada (excluding Gold), 1951-66

NOTE.—Figures have been revised to cover the adjustment for "Special Transactions—Non-trade"; see p. 955.

Year	Exports			Imports			Balance of Trade: Excess of Exports (+) Imports (—)
	Domestic	Re-exports	Total	Dutiable	Free	Total	
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000

1966.....	10,070,627	254,693	10,325,320	4,831,709	5,034,730	9,866,439	+ 458,881

Treatment of Gold in Trade Statistics.—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons, movements of gold in a primary or semi-fabricated state are excluded from the totals of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

2.—New Gold Production Available for Export, by Month, 1959-66

¹ Less than \$500.² Includes Alaska and Hawaii.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average ad valorem rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

Section 4.—Trade by Commodity

This Section provides detailed information on the composition of Canada's exports and imports for 1965 and 1966. Table 8 shows exports and re-exports to and imports from all countries, Britain and the United States, classified by section; Table 9 gives detailed statistics of all commodities of any importance exported from Canada to all countries, to Britain and to the United States; and detailed statistics for imports into Canada by section and commodity appear in Table 10.

8.—Exports to and Imports from All Countries, Britain and the United States, by Section, 1965 and 1966

(Millions of dollars)

Section 5.—Trade by Section and Stage of Fabrication

This Section contains a series of statistics covering trade by stage of fabrication, based on the new commodity classification (see p. 955). The Section totals given in Tables 11 and 12 for the period from 1947 were compiled by converting statistics tabulated on the old classification to the new framework; old classes or fragments of classes were converted to appropriate new classes and changes in content, descriptions or codes of former classes were taken into account as much as possible, but the results for 1957 and previous years are subject to some limitations.

Fabricated materials, among which newsprint ranks first, still account for about two fifths of Canada's exports but there has been a recent upsurge in the movement of end-products from Canada to other countries, ranging all the way from motor vehicles and aircraft to wearing apparel.

Well over one half of the imports into Canada are end-products and prominent among these are heavy machinery, equipment and tools required in the construction, development and operation of Canadian industries.

To classify exports and imports by Stage of Fabrication, that is, within the categories of Crude Materials, Fabricated Materials and End Products, requires a secondary classification of the commodities in certain Sections. Live Animals (Sect. I), being a natural product, is considered as crude materials; Food, Feed, Beverages and Tobacco (Sect. II) is allocated as follows: Crude Materials includes natural products not further processed than cleaned or prepared for shipment; Fabricated Materials includes commodities which are further processed and are used in processing industries rather than for direct human consumption, and also all commercial stock feeds; End Products includes commodities which are further processed and are mainly used directly for human consumption, and also prepared pet feeds. Sects. III, IV and V are clearly defined in the Standard Commodity Classification. Sect. VI contains relatively few classes; these have been pro-rated as necessary for both exports and imports according to studies undertaken over a number of years.

Exports.—An analysis of the figures for 1947-66 shows that the export totals followed an almost constantly upward trend, advancing 3.7 times over the period, with the most pronounced gains being made in 1959-66. Totals for all Sections were several times higher in 1966 than in 1947: Live Animals moved up 3.9 times; Food, Feed, Beverages and Tobacco 2.1 times; Crude Materials, Inedible 8.8 times; Fabricated Materials, Inedible 3.2 times; End Products, Inedible 5.7 times; and Special Transactions—Trade 4.1 times. All Sections except Live Animals recorded considerable increases in 1966 over 1965; End Products, Inedible advanced 63.0 p.c.; Food, Feed, Beverages and Tobacco 15.8 p.c.; Crude Materials, Inedible 10.4 p.c.; and Fabricated Materials, Inedible 7.6 p.c. Live Animals exports, which fluctuate somewhat year by year, showed a slight drop in 1966 compared with the previous year. Fabricated Materials, Inedible account for the greatest proportion of the exports, averaging about 48 p.c. over the period and for 39.8 p.c. in 1966; End Products, Inedible, which accounted for 13.6 p.c. of the exports in 1947 and lost ground for a number of years, recovered its relative importance in 1964 and in 1966 accounted for 21.0 p.c. of the total exports. Special Transactions—Trade remained unimportant in 1966 at 0.2 p.c.

Analysis of exports by stage of fabrication shows that total exports of Crude Materials were 5.0 times higher in 1966 than in 1947, Fabricated Materials were 2.9 times higher and End Products were 5.8 times higher. Crude Materials in 1966 accounted for 33.7 p.c. of the total, Fabricated Materials for 41.9 p.c. and End Products for 24.4 p.c.; in 1947 the percentages were 24.5 p.c., 54.0 p.c. and 21.5 p.c., respectively.

Imports.—The total value of imports advanced 3.9 times during the period 1947-66 but, except for 1965, yearly increases since 1962 were lower than those shown by exports. In 1966, imports of Food, Feed, Beverages and Tobacco were 2.8 times higher than in 1947; Crude Materials, Inedible were 1.9 times higher; Fabricated Materials, Inedible 3.1 times higher; and End Products, Inedible 5.7 times higher. The relative importance of Food, Feed, Beverages and Tobacco dropped from 11.3 p.c. in 1947 to 8.0 p.c. in 1966; of Fabricated Materials, Inedible from 28.6 p.c. to 22.6 p.c.; and of Crude Materials, Inedible from 20.9 p.c. to 10.4 p.c. On the other hand, the proportion accounted for by End Products, Inedible increased from 37.5 p.c. to 55.6 p.c. Live Animals and Special Transactions—Trade form a comparatively small portion of the total.

In the stage-of-fabrication analysis, although imports of Crude Materials were 2.2 times higher in 1966 than in 1947, they accounted for a decreasing proportion of total imports, dropping from a peak of 30.4 p.c. in 1950 to an average of 18.7 in 1957-66; the proportion in 1966 was 15.2 p.c. Imports of Fabricated Materials were 3.0 times higher in 1966 than in 1947, the more marked increases appearing since 1961; in 1966 this group accounted for 24.8 p.c. of the total compared with 32.4 p.c. in 1947. On the other hand, imports of End Products were 5.8 times higher in 1966 than in 1947 and their relative importance increased during the period from 40.4 p.c. to 60.0 p.c.

PART III.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Federal Foreign Trade Services*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged so that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although numerous private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives. The federal Department of Trade and Commerce, the primary function of which is the promotion of external trade, makes available to business men a wide variety of services to assist them in selling their products abroad. These services are provided by the Department's head office in Ottawa, six regional offices in Canada, and a corps of Trade Commissioners stationed around the world.

Services available from the various branches, divisions and agencies of the Department of Trade and Commerce are described below. The work of these entities is interrelated, each operating in its own field but working closely with the others to effect the over-all objective of trade promotion.

Trade Commissioner Service.—The Trade Commissioner Service, as the overseas arm of the Department, is actively engaged in the promotion of Canadian trade and the protection of Canada's commercial interests; 70 offices are maintained in 49 countries.

Every effort is made by Trade Commissioners to bring Canadian exporters and prospective buyers together. On their own initiative, and in response to requests from the Department and Canadian business men, they study potential markets for specific Canadian commodities and services. Economic reports provide background information necessary to the formulation of Departmental trade policy. Reports are provided on the demand in the country concerned, prices, competition, trade and exchange regulations, tariffs, shipping and packaging requirements, credit terms, channels of distribution, labelling regulations, etc. Inquiries from local business men for goods obtainable from Canada are forwarded to the Department in Ottawa, or directly to Canadian firms in a position to supply the products required.

The supervision of Canadian exhibits at overseas trade fairs and the provision of assistance to participating Canadian firms is an important function of many offices. Trade Commissioners make local arrangements for and travel with Canadian trade missions visiting overseas markets. They also seek sources of supply for a wide variety of goods on behalf of Canadian importers.

In developing trade opportunities, Canada's Trade Commissioners travel extensively in their territories, visit leading industrial and commercial centres and call on government officials, business men, trade associations and municipal authorities. They establish social contacts with commercial interests, thereby developing goodwill for Canada and Canadian

* Prepared in the several branches and agencies concerned, and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa.

products, while creating connections for Canadian exporters and facilitating the collection of trade information. They return to Canada at periodic intervals and make tours of Canadian industrial and commercial centres. Such direct contacts enable them to discuss specific problems with business men and bring into focus the Canadian commercial scene.

In countries where Canada has a diplomatic mission, the Canadian trade office is the commercial division and the Trade Commissioner has the rank of Minister (Commercial), Minister-Counsellor (Economic), Commercial Counsellor, Commercial Secretary or Assistant Commercial Secretary. When attached to a consulate, he carries the title of Deputy Consul General (Commercial), Consul (Commercial), or Vice-Consul (Commercial), according to his rank, in addition to that of Trade Commissioner or Assistant Trade Commissioner. He may also be the Consul General, in charge of the office. Where trade offices are detached and do not form part of a diplomatic mission, the Trade Commissioner may also be required to undertake consular, immigration and other duties as the sole representative of Canada.

CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT JAN. 1, 1968

ARGENTINA.—Commercial Counsellor, Canadian Embassy, Casilla de Correo 3898, Suipacha 1111, Buenos Aires. Territory includes Paraguay.

AUSTRALIA.—

Sydney: Commercial Counsellor for Canada, P.O. Box 3952, A.M.P. Building, Circular Quay, Sydney. Territory includes States of New South Wales and Queensland, Capital Territory, Northern Territory, and Dependencies.

Melbourne: Commercial Counsellor for Canada, Mobil Centre, 2 City Rd., South Melbourne, 3205, Victoria. Territory includes States of Victoria, South Australia, Western Australia and Tasmania.

Canberra: Commercial Counsellor, Office of the High Commissioner for Canada, Commonwealth Ave., Yarralumla 2600, Canberra ACT.

AUSTRIA.—Commercial Secretary, Canadian Embassy, P.O. Box 190, Obere Donaustrasse 49/51, 1013, Vienna. Territory includes Albania, Bulgaria, Czechoslovakia, Hungary and Romania.

BELGIUM.—Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels 4. Territory includes European Economic Community, European Atomic Energy Community and European Coal and Steel Community. Other countries: Luxembourg.

BRAZIL.—

Rio de Janeiro: Commercial Counsellor, Canadian Embassy, Caixa Postal 2164-ZC-00, Edificio Metropol, Av. Presidente Wilson 165, Rio de Janeiro.

São Paulo: Consul and Trade Commissioner, Canadian Consulate, Caixa Postal 6034, Edificio Scarpa, Av. Paulista, 1765, 9 andar, São Paulo.

BRITAIN.—

London: Minister (Commercial), Office of the High Commissioner for Canada, One Grosvenor Square, London W.1.

Liverpool: Canadian Government Trade Commissioner, Martins Bank Bldg., Water Street, Liverpool. Territory includes Midlands and North England.

Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George St., Glasgow C.2, Scotland. Territory includes Scotland.

Belfast: Canadian Government Trade Commissioner, 15-17 Chichester St., Belfast 1, Northern Ireland. Territory includes Northern Ireland.

CEYLON.—Commercial Division, Office of the High Commissioner for Canada, P.O. Box 1006, 6 Gregory's Road, Cinnamon Gardens, Colombo.

CHILE.—Commercial Counsellor, Canadian Embassy, Casilla 771, Agustinas 1225, Santiago.

COLOMBIA.—Commercial Secretary, Canadian Embassy, Apartado Aereo 8582, Edificio Banco de Los Andes, Carrera 10, No. 16-92, Bogota. Territory includes Ecuador.

CUBA.—Commercial Division, Canadian Embassy, Gaveta 6125, Calle 30 No. 518 esquina 7ª Avenida, Miramar, Havana.

DENMARK.—Commercial Counsellor, Canadian Embassy, Prinsesse Maries Allé 2, Copenhagen V. Territory includes Greenland and Poland.

DOMINICAN REPUBLIC.—Commercial Secretary, Canadian Embassy, Apartado 1393, Edificio Copello 408, Calle El Conde, Santo Domingo. Territory includes Puerto Rico and Haiti.

FRANCE.—Minister-Counsellor (Commercial), Canadian Embassy, 35 Ave. Montaigne, Paris 8°. Territory includes Algeria, Andorra, Monaco, Morocco and St. Pierre and Miquelon.

GERMANY.—

Bad Godesberg: Commercial Counsellor, Canadian Embassy, Kennedy-Allee 35, Bad Godesberg. Territory includes States of Baden-Wuerttemberg, Bavaria, Hesse, Rhineland-Palatinate and Saar and West Berlin.

Duesseldorf: Consul General, Canadian Consulate General, Koenigsallee 82, 4 Duesseldorf 1. Territory includes State of North Rhine-Westphalia.

Hamburg: Consul General, Canadian Consulate General, Esplanade 41-47, 2000 Hamburg 36. Territory includes City States of Bremen and Hamburg; States of Lower Saxony and Schleswig-Holstein.

GHANA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 1639, E 115/3 Independence Ave., Accra. Territory includes Guinea, Ivory Coast, Liberia, Mali, Mauritania, Togo and Upper Volta.

GREECE.—Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens 138. Territory includes Turkey.

GUATEMALA.—Commercial Counsellor, Canadian Embassy, P.O. Box 400, 5a Avenida 11-70, Zone 1, Guatemala City, C.A. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.

HONG KONG.—Senior Canadian Government Trade Commissioner, P.O. Box 126, P & O Building, 21-23, Des Voeux Rd., Central, Hong Kong. Territory includes Cambodia, Communist China, Laos, Viet-Nam and Macao.

INDIA.—Commercial Counsellor for Canada, P.O. Box 11, 13 Golf Links Rd., New Delhi 1. Territory includes Bhutan, Nepal and Sikkim.

IRAN.—Commercial Division, Canadian Embassy, P.O. Box 1610, Bezrouke Bldg., Corner of Takht Jamshid Ave. and Forsat St., Tehran.

IRELAND.—Commercial Counsellor for Canada, 66 Upper O'Connell St., Dublin.

ISRAEL.—Commercial Secretary, Canadian Embassy, P.O. Box 20140, 84 Hahashmonaim St., Tel Aviv. Territory includes Cyprus.

ITALY.—

Rome: Commercial Counsellor, Canadian Embassy, Via G.B. De Rossi 27, 00161 Rome. Territory includes Provinces of Toscana, Marche, Umbria, Lazio, Abruzzi-Molise, Puglia, Campania, Basilicata, Calabria, Sicilia and Sardegna. Other countries: Libya and Malta.

Milan: Consul General and Trade Commissioner, Canadian Consulate General, C.P. 3977, Via Vittor Pisani 19, 20124 Milan. Territory includes Provinces of Emilia-Romagna, Lombardia, Piedimonte, Trentino-Alto Adige, Veneto, Liguria, Trieste, Valle D'Aosta and Friuli-Venezia.

JAMAICA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 1500, Tobago Rd., (corner Trafalgar Rd. and Knutsford Blvd.) Kingston 10. Territory includes Bahamas, British Honduras, Cayman Islands, Turks and Caicos Islands.

JAPAN.—Minister (Commercial), Canadian Embassy, Akasaka Post Office, Tokyo. Territory includes Korea and Okinawa.

KENYA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 3778, Industrial Promotion Services Bldg., Kimathi St., Nairobi. Territory includes Malawi, Tanzania, Uganda and Zambia.

LEBANON.—Commercial Counsellor, Canadian Embassy, Boite Postale 2300, Alpha Bldg., Rue Clemenceau, Beirut. Territory includes Aden, Iraq, Jordan, Kuwait, Persian Gulf area, Saudi Arabia, Syria, Trucial States and Yemen.

MALAYSIA.—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 990, A.I.A. Bldg., Ampang Road, Kuala Lumpur. Territory includes Brunei and Burma.

MEXICO.—Commercial Counsellor, Canadian Embassy, Apartado Postal 5-364, Melchor Ocampo 463, Mexico 5, D.F.

NETHERLANDS.—Commercial Counsellor, Canadian Embassy, Sophialaan 7, The Hague.

NEW ZEALAND.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 12-049, ICI Building, Molesworth St., Wellington. Territory includes Cook Islands, Fiji, French Oceania, Gilbert and Ellice Islands, Tahiti, Tonga and Western Samoa.

NIGERIA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 851, Niger House, Odunlami St., Lagos. Territory includes Dahomey, Gambia, Niger, Senegal and Sierra Leone.

NORWAY.—Commercial Counsellor, Canadian Embassy, Fridtjof Nansens plass 5, Oslo 1. Territory includes Iceland.

PAKISTAN.—Commercial Counsellor, Office of the High Commissioner for Canada, 54 Haider Rd., Rawalpindi. Territory includes Afghanistan.

PERU.—Commercial Secretary, Canadian Embassy, Casilla 1212, Edificio El Pacifico, Corner Avenida Arequipa and Plaza Washington, Lima. Territory includes Bolivia.

PHILIPPINES.—Consul General and Trade Commissioner, Canadian Consulate General, P.O. Box 1825, 1414 Roxas Blvd., Manila. Territory includes Republic of China (Taiwan).

- PORTUGAL.**—Commercial Counsellor, Canadian Embassy, Rua Marques de Fronteira, No. 8-4°D°, Lisbon. Territory includes Azores, Cape Verde Islands, Madeira and Portuguese Guinea.
- SINGAPORE.**—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 845, International Building, 360 Orchard Rd., Singapore 1. Territory includes Indonesia and Thailand.
- SOUTH AFRICA.**—
Johannesburg: Canadian Government Trade Commissioner, P.O. Box 715, Mobil House, Corner Rissik and De Villiers Sts., Johannesburg. Territory includes Provinces of Natal, Orange Free State and Transvaal. Other countries: Angola, Botswana, Lesotho, Malagasy, Mauritius, Mozambique, Reunion and Swaziland.
Cape Town: Canadian Government Trade Commissioner, P.O. Box 683, African Life Centre, St. George's St. Territory includes Cape Province. Other countries: St. Helena and South West Africa.
- SPAIN.**—Commercial Counsellor, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio Muni, Rio de Oro and Spanish Sahara.
- SWEDEN.**—Commercial Counsellor, P.O. Box 14042, Kungsgatan 24, Stockholm. Territory includes Finland.
- SWITZERLAND.**—Commercial Secretary, Canadian Embassy, Kirchenfeldstrasse 88, Berne. Territory includes Tunisia and Liechtenstein.
- TRINIDAD AND TOBAGO.**—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 1246, Colonial Bldg., 72 South Quay, Port-of-Spain. Territory includes Barbados, Leeward and Windward Islands, Guyana, French Guiana, Surinam, Guadeloupe and Martinique.
- UNION OF SOVIET SOCIALIST REPUBLICS.**—Commercial Counsellor, Canadian Embassy, 23 Starokonnyushenny Pereulok, Moscow.
- UNITED ARAB REPUBLIC.**—Commercial Division, Canadian Embassy, Kasr el Doubara Post Office, 6 Sharia Rouston Pasha, Garden City, Cairo. Territory includes Ethiopia, Somali Republic and Sudan.
- UNITED NATIONS.**—Permanent Mission of Canada to the United Nations, 866 United Nations Plaza, New York, N.Y. 10017.
- UNITED STATES.**—
Washington: Commercial Counsellor, Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington, D.C. 20036. Territory includes District of Columbia.
New York City: Deputy Consul General (Commercial), Canadian Consulate General, 680 Fifth Ave., New York, N.Y. 10019. Territory includes States of Connecticut, New Jersey (eleven northern counties) and New York. Other countries: Bermuda.
Boston: Consul and Trade Commissioner, Canadian Consulate General, 500 Boylston St., Boston, Mass. 02116. Territory includes States of Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.
Chicago: Consul and Senior Trade Commissioner, Canadian Consulate General, 310 South Michigan Ave., Chicago, Ill. 60604. Territory includes States of Illinois, North Dakota, South Dakota, Minnesota, Wisconsin, Indiana, Iowa, Kentucky, Missouri and Nebraska.
Cleveland: Consul and Trade Commissioner, Canadian Consulate, Illuminating Building, 55 Public Square, Cleveland, Ohio 44113. Territory includes State of Ohio.
Dallas: Consul and Trade Commissioner, Canadian Consulate, 2100 Adolphus Tower, 1412 Main St., Dallas, Texas 75202.
Detroit: Consul and Trade Commissioner, Canadian Consulate, 1920 First Federal Bldg., 1001 Woodward Ave., Detroit, Mich. 48226. Territory includes State of Michigan.
Los Angeles: Consul and Trade Commissioner, Canadian Consulate General, 510 West Sixth St., Los Angeles, Cal. 90014. Territory includes States of California (ten southern counties), Arizona and Clark County in Nevada.
New Orleans: Consul and Trade Commissioner, Commercial Division, Canadian Consulate General, 2110 International Trade Mart, 2 Canal St., New Orleans, La. 70130. Territory includes States of Louisiana, Mississippi, Tennessee, Alabama, North Carolina, South Carolina, Georgia and Florida.
Philadelphia: Consul and Trade Commissioner, Canadian Consulate, 3 Penn Center Plaza, Philadelphia, Pa. 19102. Territory includes States of Delaware, Maryland, New Jersey (nine southern counties), Pennsylvania, Virginia and West Virginia.
San Francisco: Consul and Trade Commissioner, Commercial Division, Canadian Consulate General, One Maritime Plaza, Golden Gate Center, San Francisco, Cal. 94111. Territory includes States of California (except the ten southern counties), Wyoming, Nevada (except Clark County), Utah, Colorado and Hawaii.
Seattle: Consul General, Canadian Consulate General, 1308 Tower Bldg., Seventh Avenue at Olive Way, Seattle, Wash. 98101. Territory includes States of Oregon, Idaho, Washington, Montana and Alaska.

URUGUAY.—Commercial Division, Canadian Embassy, Casilla Postal 852, No. 1409 Avenida Agraciada Piso 7°, Montevideo. Territory includes Falkland Islands.

VENEZUELA.—Commercial Counsellor, Canadian Embassy, Apartado del Este 11452, Avenida La Estancia No. 10, Ciudad Comercial Tamanaco, Caracas. Territory includes Netherlands Antilles.

YUGOSLAVIA.—Commercial Secretary, Canadian Embassy, Proleterskih Brigada 69, Belgrade.

Trade Fairs and Missions Branch.—It is the function of this Branch to organize and co-ordinate the Department's annual program of participation in trade fairs abroad and of outgoing and incoming trade missions. The Trade Fairs Abroad Division and the Trade Missions Division co-ordinate departmental activity in implementing these promotion programs and in organizing the trade fair exhibits and trade missions scheduled during the year. The Branch Director acts as chairman of the Departmental committees that select the program and the Division Chiefs preside over working committees appointed to handle detailed planning. The Branch also provides liaison with Trade Commissioner Service posts abroad, trade associations in Canada, provincial governments and other federal departments or agencies in the development of trade promotion programs.

In 1967 the Department of Trade and Commerce sponsored exhibits in 46 trade fairs abroad in such key markets as the United States, England, West Germany, the Netherlands, France, Russia, Yugoslavia, Czechoslovakia, South Africa, Peru, Italy and Ireland. The products of hundreds of Canadian manufacturers were exhibited to potential foreign buyers estimated at over 16,000,000. The 37 trade missions organized in 1967 included

The Department of Trade and Commerce, in co-operation with provincial trade departments across Canada, organized five Kennedy Round Trade Opportunities Seminars in the autumn of 1967 to promote an understanding of the negotiations and their implications for Canadian business men. Twelve hundred of them attended the Toronto Seminar and the response was equally enthusiastic in the other four cities.

10 teams of Canadian business men sent abroad to study special markets in Western and Eastern Europe, Latin America, Australia and the Far East. Twenty-seven groups of business visitors were brought to Canada from Western and Eastern Europe, Australia, the United States, Africa, the Middle East and the Far East. The trade missions program was increased by eleven missions over the previous year and included as mission members some 100 Canadian business men and over 200 foreign business men.

Trade Policy Service.—The Office of Trade Relations, together with the Office of Commodity Trade Policy, which was established in September 1966, forms the Department's Trade Policy Service.

The main function of the Office of Trade Relations is to safeguard and improve terms of access for Canadian exporters in foreign markets. The Office is concerned with the conduct of Canadian trade relations with other countries, including the negotiation and administration of trade agreements and Canadian participation in international conferences and meetings dealing with trade and economic matters. It endeavours to find practical solutions for tariff problems and other difficulties encountered in foreign markets by Canadian exporters and, as a service to exporters, provides expert information, advice and assistance on foreign tariffs, import and exchange controls, documentation requirements and other foreign governmental regulations affecting Canada's trade. The Office also has responsibilities in relation to the export financing facilities available for the development of exports of Canadian capital equipment. The Area Divisions of the Office—Commonwealth, United States, European, Latin American and Asia and Middle East—are the central points of contact between Canada's Trade Commissioners abroad and the Department in Ottawa.

The Office of Commodity Trade Policy has two main areas of interest: it makes detailed commodity studies to ensure that the development of Canadian trade and related policies reflects the key role of export in the economy, and it has the responsibility for international commodity policy work, including the negotiation of international commodity arrangements and related activities.

Transportation and Trade Services Branch.—The functions of this Branch relate to freight transportation matters, export and import controls, trade directories, the administration of the seven Regional Offices and the provision of general guidance to firms seeking entry into the export field. These activities are conducted by three Divisions: the Transportation Division is concerned primarily with industrial transportation from the export shipper's point of view, with policies and practices affecting the movement of international trade, and with developments and trends in shipping services and freight rates; the Export and Import Permits Division administers the controls established under the Export and Import Permits Act; and the Regional Offices and Trade Services Division administers the Department's Regional Offices and compiles the Exporters' Directory, a confidential directory of firms engaged in or seriously interested in exporting commodities or services.

Commodity Branches.—The Commodities and Industries Services include three commodity branches—the Agriculture and Fisheries Branch, the Industrial Materials Branch and the Manufacturing Industries and Engineering Branch. These Branches provide the main link between industry and the Department; they maintain close contact with the business community to be familiar with production and supply conditions in Canada. Emphasis is placed on the search for products and services, the sale of which can be promoted abroad.

The Agriculture and Fisheries Branch is organized into five divisions to cover fisheries, grain, livestock and animal products, plant products, and commodity arrangements and markets development. The Industrial Materials Branch is composed of three divisions to handle chemicals, forest products and metals and minerals. The Manufacturing Industries and Engineering Branch is organized into four divisions responsible for appliances and

commercial machinery, electrical and electronic equipment, mechanical equipment and engineering, and textiles and consumer goods as well as a project division responsible for specialized studies. These divisions are staffed by commodity officers who are specialists in their fields and are available to assist Canadian business men.

Commodity officers visit manufacturing plants and production facilities, attend and address meetings of business associations and study groups and prepare product reports and market surveys. They constitute the principal channel through which information on Canadian products and services reaches Canadian Trade Commissioners abroad and a channel through which information on sales opportunities in countries abroad is disseminated to industry in Canada. They continually analyse reports from Trade Commissioners abroad to determine potential markets for commodities and services of interest to Canadian industry. In co-operation with the Canadian Government Exhibition Commission, they assist in making arrangements for the display of commodities in trade fairs throughout the world to introduce Canadian products into new markets. They organize and accompany departmental trade missions and serve as delegates to international commodity conferences to study world market conditions and to consider corrective adjustments.

Trade Publicity Branch.—The function of the Trade Publicity Branch is to stimulate interest in Canadian products in foreign markets and to encourage Canadian manufacturers to look beyond domestic horizons. Advertising, public relations and publicity techniques are used in varying combinations to accomplish these objectives. Advertising, periodicals, booklets, brochures and other printed matter are used in direct support of trade fairs and missions; news releases, radio tape recordings and television film clips are employed to inform Canadians of foreign trade opportunities and successes.

The Branch is composed of an Operations Group and five Divisions. The Operations Group plans and executes the major activities concerning trade fairs and in-store promotions. Working closely with that Group is the Editorial Division which employs writers and editors, and the Art Division which is responsible for design, production and technical work. The Media Relations Division prepares and distributes press releases, articles, photographs, speeches and background material to newspapers, radio and television stations, magazines and the Canadian trade press. It provides publicity material for distribution abroad and produces and distributes films and television clips to promote interest in Canada as a supplier of many commodities. The Canada Courier Division produces *Canada Courier*, an illustrated, eight-page international trade promotion newspaper, published on behalf of Canadian exporters to promote products and services abroad. It has a circulation of 97,000 and is distributed in more than 100 countries. The English edition is published six times a year and the French, Spanish and German editions twice annually. The Foreign Trade Division publishes the magazine *Foreign Trade*, fortnightly, and *Commerce extérieur*, monthly. These journals, designed to help Canadian exporters, contain information on overseas markets, tariffs, exchange rates and other pertinent trade data.

Canadian Government Exhibition Commission.—The Commission organizes, designs, produces and administers all Canadian exhibits at fairs and exhibitions abroad in which the Canadian Government participates and also advises private exhibitors and their agents on the best means of displaying Canadian products at trade fairs. It acts as a central service agency for all government departments and agencies in the preparation of conventional exhibits and displays for showing in Canada and is responsible for international fairs and exhibitions held in Canada that are financed and sponsored by the Government of Canada.

Canadian Government Travel Bureau.—The Canadian Government Travel Bureau is in operation to encourage tourist travel to Canada and to co-ordinate the tourist promotion conducted by the provinces, transportation companies and national, regional and local tourist associations. The Bureau undertakes extensive tourist advertising campaigns abroad, provides tourist publicity material for foreign newspapers, magazines, radio and television outlets, and handles about 2,000,000 inquiries a year from potential visitors to Canada. Offices are operated in New York, Chicago, San Francisco, Minneapolis, Los Angeles, Boston, Philadelphia, Cincinnati, Rochester, Indianapolis, Cleveland, Detroit, Washington, Hartford, Pittsburgh and Seattle in the United States; the Bureau also has representation in London, Paris, Frankfurt, Amsterdam, Copenhagen, Mexico City, Tokyo and Sydney, Australia.

Export Credits Insurance Corporation.—This Corporation was established under the provisions of the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It operates in two fields—export credits insurance and long-term export financing.

Insurance is available to all persons or corporations carrying on business in Canada to cover export sales made on customary credit terms. It provides protection against risks involved in the export, manufacture, treatment or distribution of goods, or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or an export licence or the imposition of restrictions on the import or export of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country. The insurance is available under three main classifications—general commodities, capital goods and services. General commodities policies cover a policyholder's export sales to all countries for a period of one year, and are renewable. Two types are available: the contracts policy, which insures an exporter against loss from the time he books an order until payment is received; or the shipments policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit up to a maximum of five years may be necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services. The Corporation may also extend unconditional guarantees to Canadian chartered banks which will agree to provide non-recourse financing to insured exporters who have sold capital equipment abroad on medium-term credit.

The Corporation insures exporters on a co-insurance basis, the exporter retaining a small percentage of the risk involved, and the same principle operates in the distribution of recoveries obtained after the payment of a claim. When, in the opinion of the Minister of Trade and Commerce, a proposed transaction is in the national interest but would impose upon the Corporation a liability for a term or in an amount in excess of that normally undertaken, the Corporation may be authorized by the Governor in Council to enter into a contract of insurance at the Government's risk.

The Corporation also administers direct financing facilities available under the Act in cases where export sales involving capital goods are of such a nature as to warrant credit terms in excess of five years. The Corporation, when authorized by the Governor in Council, buys the promissory notes or other negotiable instruments of the foreign purchaser.

Section 2.—The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates—British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a port of Canada. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariffs, or under all Tariffs.

Valuation.—In general, the Customs Act provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold “(a) to purchasers located at that place with whom the vendor deals at arm’s length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions”. In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty ordinarily may not be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

Dumping.—Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than the fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This

* Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise, which administers the Customs Act and the Customs Tariff.

duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. ad valorem. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices in the country of export.

Drawback.—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Act and the Customs Tariff and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.—The organization and functions of the Tariff Board are described t p. 138 of this volume.

Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Sept. 15, 1967

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements providing for exchange of preferential rates are: Australia, the Bahamas, Barbados, Bermuda, Guyana, British Honduras, Jamaica, the Leeward and Windward Islands, Trinidad and Tobago, New Zealand, Britain and its dependent territories, and Malawi. Canada also exchanges preferences with Ceylon, Cyprus, Malaysia and Malta and accords preferences to India, Pakistan, Ghana, Nigeria, Kenya, Tanzania, Uganda, Zambia and Sierra Leone. Many of these countries are also members of the GATT. In addition, Canada has trade agreements with Ireland and South Africa under which preferences are exchanged.

Canada signed the Protocol of Provisional Application of the General Agreement on Tariffs and Trade on Oct. 30, 1947, and brought the General Agreement into force on Jan. 1, 1948. The Agreement provides for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties, and lays down rules and regulations to govern the conduct of international trade.

At the beginning of August 1967, there were 72 full members in the GATT. These countries and the effective dates of their accession are indicated in the following list. In addition, Argentina, Iceland, Tunisia and the United Arab Republic were provisional members. The GATT is applied on a *de facto* basis to a number of newly independent states—Algeria, Botswana, Democratic Republic of the Congo, Lesotho, Maldive Islands, Mali, Singapore and Zambia—pending decisions as to their future commercial policies; Cambodia and Poland, although not members, participate in the work of the GATT. At the time of writing, a postal ballot on the full accession of Argentina, Iceland, Poland and Ireland was being conducted.

Trade relations between Canada and a number of other countries are governed by trade agreements of various kinds, by exchange of most-favoured-nation treatment under Orders in Council, by continuation to newly independent states of the same treatment originally negotiated with the countries previously responsible for their commercial relations, and by even less formal arrangements.

**Tariff and Trade Arrangements with Commonwealth Countries
as at Sept. 15, 1967**

Country	Agreement	Tariff Treatment
AUSTRALIA.....	Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and margins and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BARBADOS.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Nov. 30, 1966.	The parties exchange specified tariff preferences.
BRITAIN.....	Trade Agreement signed Feb. 23, 1937, effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 20, 1947. GATT effective Jan. 1, 1948.	Various concessions are granted by each country including exchange of preferential tariff rates. The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trustships.
CEYLON.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
COMMONWEALTH CARIBBEAN (BAHAMAS, BARBADOS, BERMUDA, BRITISH HONDURAS, THE LEEWARD ISLANDS, AND THE WINDWARD ISLANDS).	Canada-British West Indies Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. Protocol signed July 8, 1966 continues <i>ad interim</i> and amends Part I of the Canada-British West Indies Trade Agreement; terminates Part II of that Agreement and incorporates a number of additional provisions. Barbados, Bermuda, British Honduras and the Leeward and the Windward Islands participate in GATT.	The parties exchange specified tariff preferences.
CYPRUS.....	GATT effective Aug. 16, 1960.	Canada exchanges preferential tariff treatment with Cyprus.
GAMBIA.....	GATT effective Feb. 18, 1965.	Canada and Gambia exchange preferential tariff treatment.
GHANA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 18, 1957.	Canada accords British preferential treatment to Ghana (except on cocoa beans). Ghana extends most-favoured-nation treatment to Canada.
GUYANA.....	Relations are based on the Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective July 5, 1966.	The parties exchange specified tariff preferences.
INDIA.....	Since 1897 Canada has unilaterally accorded British preferential treatment without contractual obligation. GATT effective July 8, 1948.	Canada accords British preferential treatment to India. India extends most-favoured-nation treatment to Canada.
JAMAICA.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Aug. 6, 1962.	The parties exchange specified tariff preferences.
KENYA.....	GATT effective Dec. 12, 1963.	Canada accords British preferential tariff treatment to Kenya. Kenya extends most-favoured-nation treatment to Canada.

**Tariff and Trade Arrangements with Commonwealth Countries
as at Sept. 15, 1967—concluded**

Country	Agreement	Tariff Treatment
MALAWI.....	Malawi and Canada observe the terms of the 1958 Trade Agreement between Canada and the former Federation of Rhodesia and Nyasaland. GATT effective July 6, 1964.	Canada exchanges preferential tariff treatment with Malawi.
MALAYSIA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 16, 1963.	Canada and Malaysia exchange preferential tariff treatment.
MALTA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 16, 1964.	Canada exchanges British preferential treatment with Malta.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948.	The parties exchange specific preferences on scheduled goods and reciprocally grant British preferential rates on items not scheduled. May be terminated on six months notice.
NIGERIA, FEDERATION OF.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 1, 1960.	Canada accords British preferential treatment to Nigeria. Nigeria extends most-favoured-nation treatment to Canada.
PAKISTAN.....	Canada unilaterally accords British preferential treatment without contractual obligation. GATT effective July 30, 1948.	Canada accords British preferential treatment to Pakistan. Exchange of most-favoured-nation treatment.
RHODESIA.....	Canada does not recognize the present Government of Rhodesia.	Effective Nov. 11, 1965, Canada withdrew preferential treatment from Rhodesian goods, making them liable to the general tariff rate. Effective Dec. 31, 1965, Rhodesia withdrew preferential treatment from Canadian goods and required that they pay the most-favoured-nation rate.
SIERRA LEONE.....	Relations continue to be governed by Trade Agreement with Britain of 1937. GATT effective Apr. 27, 1961.	Exchange of most-favoured-nation treatment. Canada accords British preferential treatment to Sierra Leone. Sierra Leone extends most-favoured-nation treatment to Canada.
SINGAPORE.....	GATT effective <i>de facto</i> Aug. 9, 1965, pending Singapore's decision on commercial policy.	Canada and Singapore exchange preferential treatment.
TRINIDAD AND TOBAGO.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Aug. 31, 1962.	The parties exchange specified tariff preferences.
UGANDA.....	GATT effective Oct. 9, 1962.	Canada accords British preferential tariff treatment to Uganda. Uganda extends most-favoured-nation tariff treatment to Canada.
UNITED REPUBLIC OF TANZANIA.	GATT effective for Tanganyika Dec. 9, 1961 and extended to Zanzibar upon formation of United Republic Apr. 23, 1964.	Canada accords British preferential tariff treatment to the United Republic of Tanzania. Tanzania extends most-favoured-nation tariff treatment to Canada.
ZAMBIA.....	GATT extension of <i>de facto</i> application, expiry date Oct. 24, 1967.	Canada accords British preferential treatment to Zambia. Zambia extends most-favoured-nation tariff treatment to Canada.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Sept. 15, 1967**

Country	Agreement	Tariff Treatment
ALGERIA.....	Franco-Canadian Trade Agreement of 1933 applied to Algeria. Algeria maintains a <i>de facto</i> application of the GATT.	Since the creation of Algeria as an independent state in 1962, Canada has continued to grant most-favoured-nation treatment.
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941. Argentina has acceded to GATT provisionally and applied for full membership in 1967.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice.
AUSTRIA.....	GATT effective Oct. 19, 1951.	Exchange of most-favoured-nation treatment.
BELGIUM-LUXEMBOURG.....	Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BENELUX (BELGIUM-NETHERLANDS-LUXEMBOURG CUSTOMS UNION).	(See Belgium-Luxembourg and Netherlands.)	
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of U.K.-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most-favoured-nation treatment.
BULGARIA.....	Trade Agreement signed Oct. 8, 1963 and renewed to Oct. 8, 1969.	Exchange of most-favoured-nation treatment and undertaking by Bulgaria to purchase a minimum of 200,000 metric tons of wheat or equivalent in flour during the three years validity of the Agreement.
BURMA.....	GATT effective July 29, 1948.	Exchange of most-favoured-nation treatment.
BURUNDI.....	GATT effective July 1, 1962.	Canada grants most-favoured-nation treatment.
CAMBODIA.....	Franco-Canadian Trade Agreement of 1933 applied to Cambodia. Although not a full member, Cambodia takes part in the work of GATT under a special arrangement.	Since the creation of Cambodia as an independent state in 1955, Canada has continued to grant most-favoured-nation treatment.
CAMEROON.....	Franco-Canadian Trade Agreement of 1933 applied to Cameroon. GATT effective Nov. 28, 1960.	Exchange of most-favoured-nation treatment.
CENTRAL AFRICAN REPUBLIC...	Franco-Canadian Trade Agreement of 1933 applied to Central African Republic. GATT effective Aug. 14, 1960.	Exchange of most-favoured-nation treatment.
CHAD.....	Franco-Canadian Trade Agreement of 1933 applied to Chad. GATT effective Aug. 11, 1960.	Exchange of most-favoured-nation treatment.
CHILE.....	Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941, and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most-favoured-nation treatment.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946. Covers the territory of China and Taiwan.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Sept. 15, 1967—continued**

Country	Agreement	Tariff Treatment
COLOMBIA.....	Treaty of Commerce with Britain of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CONGO (BRAZZAVILLE).....	Franco-Canadian Trade Agreement of 1933 applies to Congo (Brazzaville). GATT effective Aug. 15, 1960.	Exchange of most-favoured-nation treatment.
CONGO (LEOPOLDVILLE).....	Belgo-Canadian Convention of Commerce of 1924 applied to Congo (Leopoldville). Maintains a <i>de facto</i> application of the GATT.	Since the Congo's independence in 1960, Canada has continued to grant most-favoured-nation treatment.
COSTA RICA.....	<i>Modus vivendi</i> signed Nov. 18, 1950; brought into force Jan. 26, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CUBA.....	GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment.
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most-favoured-nation treatment.
DAHOMY.....	Franco-Canadian Trade Agreement of 1933 applied to Dahomey. GATT effective Aug. 1, 1960.	Exchange of most-favoured-nation treatment.
DENMARK (INCLUDING GREENLAND).	Treaties of Peace and Commerce with Britain of Feb. 13, 1660 and July 11, 1670, apply to Canada. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment. Declaration of May 9, 1912 provides means for separate termination by Dominions on one years notice.
DOMINICAN REPUBLIC.....	Trade Agreement signed Mar. 8, 1940; in force Jan. 22, 1941. GATT effective May 19, 1950.	Exchange of most-favoured-nation treatment including scheduled concessions.
ECUADOR.....	<i>Modus vivendi</i> signed Nov. 10, 1950; in force Dec. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
EGYPT.....	(See United Arab Republic.)	
EL SALVADOR.....	Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most-favoured-nation treatment. May be terminated on four months notice.
ETHIOPIA.....	Exchange of notes effective June 3, 1955.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FINLAND.....	Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May 25, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FRANCE AND FRENCH OVERSEAS TERRITORIES.	Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on three months notice.
GABON.....	Franco-Canadian Trade Agreement of 1933 applied to Gabon. GATT effective Aug. 17, 1960.	Exchange of most-favoured-nation treatment.
GERMANY, FEDERAL REPUBLIC OF.	GATT effective Oct. 1, 1951.	Exchange of most-favoured-nation treatment.
GREECE.....	<i>Modus vivendi</i> by exchange of notes of July 24-28, 1947. GATT effective Mar. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.

Sept. 15, 1967—continued**

Country	Agreement	Tariff Treatment
LAOS.....	Franco-Canadian Trade Agreement of 1933 applied to Laos.	Since the creation of Laos as an independent state in 1955, Canada has continued to grant most-favoured-nation treatment.
LEBANON.....	Special arrangement by Order in Council of Nov. 19, 1946.	Canada grants most-favoured-nation tariff rates as long as Lebanon accords reciprocal treatment.
LIBERIA.....	Special arrangement by Order in Council effective Mar. 1, 1955.	Canada grants most-favoured-nation treatment.
LIECHTENSTEIN.....	(See Switzerland.)	
LUXEMBOURG.....	(See Belgium-Luxembourg.)	
MALAGASY REPUBLIC.....	Franco-Canadian Trade Agreement of 1933 applied to Malagasy Republic. GATT effective June 25, 1960.	Exchange of most-favoured-nation treatment.
MALI, FEDERATION OF.....	Franco-Canadian Trade Agreement of 1933 applied to Mali. Mali maintains a <i>de facto</i> application of the GATT.	Since the creation of Mali as an independent state in 1960, Canada has continued to grant most-favoured-nation treatment.
MAURITANIA.....	Franco-Canadian Trade Agreement of 1933 applied to Mauritania. GATT effective Nov. 28, 1960.	Exchange of most-favoured-nation treatment.
MEXICO.....	Trade Agreement signed Feb. 8, 1946; in force provisionally same date. Ratifications exchanged on May 6, 1947; definitively in force 30 days from that date.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
MOROCCO.....	Various agreements relating to former French, Spanish and International Zones of Morocco.	Since the creation of Morocco as an independent state in 1956, Canada has continued to grant most-favoured-nation treatment.
NETHERLANDS.....	Convention of Commerce of July 11, 1924. Suspended during war; reinstated by exchange of notes Feb. 1 and 5, 1946. Includes Netherlands Antilles and Surinam. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
NICARAGUA.....	Trade Agreement signed Dec. 19, 1946; in force provisionally same date. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment.
NIGER.....	Franco-Canadian Trade Agreement of 1933 applied to Niger. GATT effective Aug. 3, 1960.	Exchange of most-favoured-nation treatment.
NORWAY.....	Convention of Commerce and Navigation with U.K. of Mar. 18, 1826, applied to Canada. GATT effective July 10, 1948.	Exchange of most-favoured-nation treatment. Convention of May 16, 1913 provides means for separate termination by Dominions on one years notice.
PANAMA.....	Order in Council of July 20, 1935, accepted Article 12 of U.K.-Panama Treaty of Commerce of Sept. 25, 1928. Treaty terminated in 1942.	While contractual obligation has expired, Canada and Panama continue to exchange most-favoured-nation treatment.
PARAGUAY.....	Exchange of notes of May 21, 1940; in force June 21, 1940.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
PERU.....	GATT effective Oct. 8, 1951.	Exchange of most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Sept. 15, 1967—continued**

Country	Agreement	Tariff Treatment
PHILIPPINES.....	No agreement.	Canada and Philippines, without contractual obligation, continue to exchange most-favoured-nation treatment (excluding preferences accorded by the Philippines to the United States).
POLAND.....	Convention of Commerce signed July 3, 1935, in force Aug. 15, 1936. Although not a full member, Poland takes part in the work of GATT under a special arrangement.	Exchange of most-favoured-nation treatment including scheduled reductions. May be terminated on three months notice.
PORTUGAL, PORTUGUESE ADJACENT ISLANDS AND PORTUGUESE OVERSEAS PROVINCES.	Trade Agreement signed May 28, 1954 provisionally in effect July 1, 1954, definitively in force on ratification Apr. 29, 1955. GATT effective May 6, 1962.	Exchange of most-favoured-nation treatment. Remains in effect for two years from ratification and thereafter unless terminated on three months notice.
RWANDA.....	GATT effective Jan. 1, 1966.	Canada grants most-favoured-nation treatment.
SENEGAL.....	Franco-Canadian Trade Agreement of 1933 applied to Senegal. GATT effective June 20, 1960.	Exchange of most-favoured-nation treatment.
SOUTH AFRICA.....	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932.	Exchange of British preferential rates on scheduled items. May be terminated on six months notice.
	Exchange of notes Aug. 2-31, 1935; effective retroactively from July 1, 1935. GATT effective June 14, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
SPAIN AND SPANISH POSSESSIONS.	Since Aug. 1, 1928, Canada has adhered to U.K.-Spain Treaty of Commerce of Oct. 31, 1922.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
	Trade Agreement signed May 26, 1954, provisionally in effect July 1, 1954, definitively in force on ratification June 30, 1955. GATT effective Aug. 29, 1963.	Supplements and amends U.K.-Spain Treaty of Commerce. Remains in effect for three years from ratification, and thereafter unless terminated on three months notice.
SWEDEN.....	U.K.-Sweden Convention of Commerce and Navigation of Mar. 18, 1826 applies to Canada. GATT effective May 1, 1950.	Exchange of most-favoured-nation treatment. Declaration of Nov. 27, 1911 provides means for separate termination by the Dominions on one years notice.
SWITZERLAND.....	U.K.-Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855 applies to Canada. By exchange of notes Liechtenstein included under terms of this Agreement, effective July 14, 1947. GATT effective Aug. 1, 1966.	Exchange of most-favoured-nation treatment. Convention of Mar. 30, 1914 provides means for separate termination by the Dominions on one years notice.
SYRIAN ARAB REPUBLIC.....	Special Arrangement by Order in Council of Nov. 19, 1946.	Canada grants most-favoured-nation tariff rates as long as Syria accords reciprocal treatment.
Togo.....	Franco-Canadian Trade Agreement of 1933 applied to Togo. GATT effective Apr. 27, 1960.	Since the creation of Togo as an independent state in 1960, Canada has continued to grant most-favoured-nation treatment.
TUNISIA.....	Franco-Canadian Trade Agreement of 1933 applied to Tunisia. Tunisia has acceded to GATT provisionally.	Since the creation of Tunisia as an independent state in 1956, Canada has continued to grant most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Sept. 15, 1967—concluded**

Country	Agreement	Tariff Treatment
TURKEY.....	Exchange of notes signed Mar. 1, 1948; in effect Mar. 15, 1948. GATT effective Oct. 17, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
UNION OF SOVIET SOCIALIST REPUBLICS.	Trade Agreement signed Feb. 29, 1956, renewed for another three years Apr. 18, 1960 and again for the same period on Sept. 16, 1963 and again for the same period on June 20, 1966 (the extension to be valid from Apr. 18, 1966).	Exchange of most-favoured-nation treatment and undertaking by U.S.S.R. to purchase a minimum of 6,375,000 long tons of wheat and flour during the three-year period of validity of the extended agreement.
UNITED ARAB REPUBLIC (EGYPT).	Exchange of notes Nov. 26 and Dec. 3, 1952; in force Dec. 3, 1952. The United Arab Republic has acceded provisionally to the GATT.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
UNITED STATES.....	Trade Agreement signed Nov. 17, 1938; suspended as long as both countries continue to be contracting parties to GATT. GATT effective Jan. 1, 1948.	Most-favoured-nation treatment exchanged.
UPPER VOLTA.....	Franco-Canadian Trade Agreement of 1933 applies to Upper Volta. GATT effective Aug. 5, 1960.	Exchange of most-favoured-nation treatment.
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. Additional protocol signed Oct. 19, 1953. GATT effective Dec. 16, 1953.	Most-favoured-nation treatment.
VENEZUELA.....	<i>Modus vivendi</i> signed and brought into force Oct. 11, 1950.	Exchange of most-favoured-nation treatment. Made for one year subject to annual renewal.
VIET-NAM.....	Franco-Canadian Trade Agreement of 1933 applied to Viet-Nam.	Since the creation of Viet-Nam as an independent state in 1955, Canada has continued to accord most-favoured-nation rates.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of U.K.-Serb-Croat-Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928. GATT effective Aug. 25, 1966.	Exchange of most-favoured-nation treatment.

PART IV.—TRAVEL BETWEEN CANADA AND OTHER COUNTRIES*

The amount of travel between Canada and other countries continued its upward trend in 1966 and, as would be expected, the largest exchange of travel was with the United States. Visitors to Canada from that country numbered 35,300,000 and Canadian residents returning from the United States totalled 34,700,000. Both figures were about 4 p.c. higher than for the previous year, similar to the increase shown between 1964 and 1965. At the same time, there was a very substantial increase in overseas travel. Canadians returning from visits to overseas countries numbered 502,925, some 10 p.c.

* Prepared in the Travel Statistics Section, Balance of Payments and Financial Flows Division, Dominion Bureau of Statistics.

more than in 1965. Overseas visitors entering Canada direct numbered 149,502, an increase of 12.5 p.c., and 261,261 came by way of the United States.

Expenditures by international travellers reached new records in 1966, mainly as a result of the increased volume. Money spent by foreign visitors in Canada and by Canadians in other countries are of importance to the travel industry and influence Canada's balance of payments position. In 1966, an estimated \$900,000,000 was spent by Canadians travelling abroad, 13.1 p.c. more than in 1965, and visitors to Canada from all countries spent \$840,000,000, an increase of 12.4 p.c. over the previous year. Thus, the balance of payments position was a little less favourable in the later year, the deficit on travel account with all countries amounting to \$60,000,000 compared with \$49,000,000 in 1965. This position was accounted for mainly by a higher deficit on account with overseas countries, since Canadians spent \$162,000,000 more overseas than overseas visitors spent in Canada; payments by Canadians were estimated at \$272,000,000, up 9.7 p.c. over 1965, and receipts from overseas visitors were \$110,000,000, up 26.4 p.c. On the other hand, a credit balance of \$102,000,000 was realized on travel account with the United States; Canadian payments totalled \$628,000,000, an increase of 14.6 p.c., and receipts from United States travellers in Canada amounted to \$730,000,000, a gain of 10.6 p.c. over 1965.

Travel Between Canada and the United States.—In 1966, 35,325,000 United States residents spent \$730,000,000 in Canada. The low average expenditure per person was attributable to the large number of short-term travellers who spent little during their visit. Persons entering and leaving Canada on the same day numbered 22,507,300, roughly 64 p.c. of the volume, but expenditures by this group were estimated at \$78,655,000 or only 11 p.c. of the total receipts. On the other hand, visitors staying one or more nights in Canada spent \$651,277,000, which was 89 p.c. of the total expenditures, although they formed only 36 p.c. of the entries from the United States.

The 26,868,100 residents of the United States who visited Canada by car in 1966 spent an estimated \$473,700,000. This was an increase in volume of 2.5 p.c. and an increase in expenditure of 7.8 p.c., indicating a larger outlay per person than in 1965. The number of persons entering by rail decreased again in 1966 but those coming by air, bus and boat increased 14, 11 and 7 p.c., respectively. The 710,000 travellers entering from the United States by air spent \$104,900,000, the 698,000 entering by bus spent \$77,100,000, the 552,000 entering by boat spent \$11,000,000 and the 344,000 coming by rail spent \$30,300,000. The main province of destination of United States travellers entering Canada by air, bus and rail was Ontario, as specified by 45 p.c. of those completing travel questionnaires. Quebec followed with 27 p.c. and British Columbia with 13 p.c.

Expenditures by Canadians for travel in the United States (excluding Hawaii) reached a record level in 1966 at an estimated \$616,200,000. Of the total 34,679,900 Canadians returning from the United States, 27,422,500 or 79 p.c. returned on the same day as they left Canada; these short-term travellers spent \$57,600,000 or 9 p.c. of the total payments, the remaining expenditures being made by persons staying one or more nights in the United States. Canadians travelling by automobile accounted for 81 p.c. of the total number and 58 p.c. of the total expenditures.

A questionnaire survey recording the purpose of trips of Canadians returning from the United States in 1966 showed the main reasons for travel to that country to be recreation or holiday, reported by 59.6 p.c., visits to friends or relatives by 24.8 p.c., and business by 8.4 p.c. Residents of Quebec reported the highest percentage of recreation trips at 68 p.c., Ontario accounted for the highest percentage of visits to friends or relatives at 32 p.c., and Alberta the highest percentage for business trips at 12 p.c.

Travel Between Canada and Overseas Countries.—As already mentioned, travel between Canada and overseas countries has been expanding at a proportionately greater rate than that between Canada and the United States. Non-immigrants entering Canada from overseas countries in 1966 numbered 410,763, of whom 149,502 came direct and 261,261 arrived by way of the United States. These visitors spent in Canada an estimated \$110,000,000, an increase of \$23,000,000 over 1965. Visitors from Britain spent \$39,000,000 or 35 p.c. of the total, those from other sterling areas spent \$12,000,000 or 11 p.c., from other Europe (OECD) \$36,000,000 or 33 p.c., and from other areas \$23,000,000 or 21 p.c.

Certain information concerning the travel habits of overseas visitors entering Canada direct was available in 1966. Of the total direct entries, 138,462 or 93 p.c. arrived by air and 11,040 or 7 p.c. by ship. During the year, 68,219 persons or 46 p.c. came direct to Canada from Britain, 49,549 or 33 p.c. from countries within the OECD, 11,971 or 8 p.c. from other Commonwealth countries, and 19,763 or 13 p.c. from all other countries. In response to a questionnaire survey in 1966, overseas visitors reported their main destinations as Ontario 34 p.c., British Columbia 26 p.c. and Quebec 25 p.c.; 66 p.c. gave visits to friends or relatives as the main reason for travel direct to Canada, 18 p.c. reported business, and 14 p.c. recreation. The average length of stay of overseas visitors was 26 days compared with 34 days in 1965. By area of residence, visitors from Britain stayed an average of 28 days in Canada, 43 p.c. gave Ontario as their main province of destination and 77 p.c. came to visit friends or relatives. In comparison, visitors from Continental Europe stayed an average of 29 days, 37 p.c. reported Quebec as their main destination and 59 p.c. came to visit friends or relatives.

Of the 502,925 Canadians returning from overseas countries in 1966, 422,925 came direct and 80,000 returned by way of the United States, representing increases of 9.5 p.c.

and 14.3 p.c., respectively. Gross expenditures of Canadian travellers overseas, estimated at \$386,000,000, included payments of \$106,000,000 to Canadian carriers for oceanic transportation, \$8,000,000 to United States carriers, and \$75,000,000 to overseas carriers. Net payments by Canadian travellers overseas, which is the sum of expenditures within overseas countries and the payments to overseas carriers, amounted to an estimated \$272,000,000, of which \$94,000,000 was spent in Britain, \$120,000,000 in Continental Europe, \$29,000,000 in other Commonwealth countries and \$29,000,000 in all other countries.

From replies to questionnaires completed by Canadians returning both direct and by way of the United States, the following main destinations overseas were estimated: Britain, 121,000; France, 90,000; Germany, 79,000; the Netherlands, 61,000; Switzerland, 56,000; and Italy, 50,000. In addition to the 121,000 visits to Britain only, some 101,000 visits were made to both Britain and other European countries. These figures represent *visits* to the various countries rather than *visitors* since many people visit several countries on the same trip. Visits to the Caribbean area, including Bermuda, were estimated at 71,000 and visits to Mexico at 29,000. Some 49 p.c. of Canadians returning direct from overseas countries reported recreation as their main reason for travel and 40 p.c. specified visits to friends or relatives. About 66 p.c. of the persons re-entering by way of the United States travelled for the purpose of recreation and only 17 p.c. for visits to friends or relatives. It is estimated that 50 p.c. of the Canadians returning direct were residents of Ontario, 20 p.c. of Quebec and 12 p.c. of British Columbia. Of the Canadians re-entering by way of the United States, 38 p.c. were residents of Ontario, 31 p.c. of Quebec and 17 p.c. of British Columbia. The average length of stay was 32 days for Canadians returning direct in 1966 and 24 days for those coming back by way of the United States.

Looking down toward the famous Percé Rock which rises out of the St. Lawrence Gulf like a sentinel guarding the picturesque little village of Percé on the east coast of Quebec's Gaspé Peninsula.

In the past two decades, annual expenditures by the Federal Government have increased fourfold. Within that period, vast new responsibilities have been undertaken—in supporting the old, the ill, the handicapped and the poor, in providing financial aid for projects of national value or of local value in the less-developed parts of the country, in providing financial assistance for technical and vocational training and for universities, in undertaking measures to improve the flexibility of the labour force, and in contributing to productivity and industrial development through research and the provision of basic facilities and services in many areas.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

Combined statistics of public finance for all governments in Canada—federal, provincial and municipal—are presented in Section 1 of this Chapter and Section 2 covers the incidence of taxation at the three levels. More detailed information for each level of government is given in Sections 3, 5 and 6. Section 4 gives information on the rapidly growing list of joint federal-provincial programs and on the extent of federal financial participation in such programs.

Section 1.—Combined Statistics of Public Finance for All Governments

Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by source and net combined current and capital expenditure by function, respectively, for 1963 and 1964. This net basis has been prepared by deducting from revenue, and from the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

* Except as otherwise indicated, revised in the Governments Division, Dominion Bureau of Statistics.

Section 2.—Taxation in Canada*

Canada is a federal state with a central government and ten provincial governments. In 1867 the principal colonies of the British Crown in North America joined together to form the nucleus of a new nation and the British North America Act of that year became its written constitution. This statute created a central government with certain powers while continuing the existence of political subdivisions called provinces with powers of their own.

Under the British North America Act the Parliament of Canada has the right to raise "money by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the province in order to the raising of a revenue for provincial purposes". Thus the provinces have a right to share only in the field of direct taxation while the Federal Government is not restricted in any way in matters of taxation. The British North America Act also empowers the provincial legislatures to make laws regarding "municipal institutions in the province". This means that the municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". This conception has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under the guidance of provincial legislation, tax real estate, water consumption and places of business. The Federal Government levies direct taxes on income, on gifts and on the estates of deceased persons, and indirect taxes such as excise taxes, excise and customs duties, and a sales tax.

* Revised (December 1967) in the Tax Policy Division, Department of Finance, under the direction of F. R. Irwin, Director of the Division, and by the provincial authorities concerned.

The increasing use by both the federal and the provincial governments of their rights in the field of direct taxation in the 1930s resulted in uneconomic duplication and some severe tax levies. Starting in 1941, a series of federal-provincial tax agreements were concluded to promote the orderly imposition of direct taxes. The duration of each agreement was normally five years. Under the earlier agreements, the participating provinces undertook, in return for compensation, not to use or permit their municipalities to use certain of the direct taxes. Under the present arrangements, the federal income tax otherwise payable in all provinces and the estate tax otherwise payable in three provinces are abated by certain percentages to make room for provincial levies.

The current arrangements became operative on Apr. 1, 1962 and were originally scheduled to terminate on Mar. 31, 1967, but have been extended to Mar. 31, 1969. They amount to a partial federal withdrawal from the field of direct taxation and a re-entry of all provinces into the vacated area. The federal personal income tax otherwise payable on income earned in a province and on income received by a resident of a province is reduced by the following percentages: 16 p.c. for 1962 income, 17 p.c. for 1963 income, 18 p.c. for 1964 income, 21 p.c. for 1965 income, 24 p.c. for 1966 income and 28 p.c. for 1967 and 1968 income.* The abatements in respect of income earned in Quebec or received by a resident of Quebec are 44 p.c. for 1965 income, 47 p.c. for 1966 income and 50 p.c. for 1967 and 1968 income. The additional points of abatement in Quebec are to allow that province to collect revenue to pay for certain programs that are paid for in whole or in part by the Federal Government in other provinces. The Federal Government also reduces its rate of corporation income tax on taxable income of corporations earned in the provinces. The reduction was 9 p.c. of taxable income earned in any province except Quebec and 10 p.c. of taxable income earned in Quebec for the years from 1962 to 1967. The additional 1-p.c. reduction in respect of taxable income earned in the Province of Quebec for these years was to compensate for the additional tax levied by the province during this period on corporation income to provide grants to universities. These provincial grants replaced federal grants which in other provinces were paid to the universities by the Federal Government through the Canadian Universities Foundation. For 1967 and 1968, with the termination of direct federal financial assistance to universities, the abatement of the federal rate of corporation income tax is 10 p.c. of taxable income in all provinces. The Federal Government also abates the federal estate tax otherwise payable by 75 p.c. in respect of property situated in a province that levies its own death tax.†

These reductions in federal income tax and estate tax do not apply to the Yukon Territory or the Northwest Territories or to income earned outside Canada. The Yukon and Northwest Territories do not impose income taxes or death taxes.

The provincial tax rates are not restricted to the extent of the federal withdrawal. The constitutional position of the provinces permits them unlimited use of direct taxes for the raising of revenue for provincial purposes. However, in five provinces (Prince Edward Island, Nova Scotia, New Brunswick, Alberta and British Columbia), the provincial rates of income tax do not exceed the federal abatement.

As part of the 1962-69 fiscal arrangements, the Federal Government has entered into tax collection agreements under which it collects the provincial personal income taxes for all provinces except Quebec and the provincial corporation income taxes for all provinces except Ontario and Quebec.

* The original agreement provided for abatements of 19 p.c. for 1965 income and 20 p.c. for 1966 income. However, in 1964 the provinces were granted an additional two percentage points for 1965 income and four percentage points for 1966 income and in 1966 they were granted an additional four percentage points for 1967 and 1968 income.

† The original agreement was for a 50-p.c. abatement but at the conclusion of a federal-provincial conference in late 1963 it was increased to 75 p.c. in respect of deaths occurring after Mar. 31, 1964. Currently, only the estates of domiciliaries of British Columbia qualify for the full 75-p.c. abatement. Quebec and Ontario estates are temporarily eligible for only 50 p.c. because they have elected for the time being to take a payment from the Federal Government on account of the additional 25-p.c. abatement rather than to increase their succession duty rates.

Subsection 1.—Federal Taxes**Individual Income Tax**

Personal income taxation in Canada is on the basis of residence rather than citizenship. Every individual who is resident in Canada at any time during a year is liable for the payment of income tax on all his income. Every non-resident individual who is employed or carries on business in Canada during a year is liable for tax on his income earned in Canada. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also extensions of the meaning of Canadian resident to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the Armed Forces of Canada or an ambassador, a high commissioner, or an officer or servant of Canada or of any one of its provinces, or the spouse or dependent child of any such person. The extended meaning of residence also includes employees who go from Canada to work under certain international development assistance programs.

The Canadian tax law uses the concepts "income" and "taxable income". The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from all businesses, property, offices and employments. It does not include capital gains unless they arise out of the conduct of a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, fees, annuities, pension benefits, allowances, interest, alimony, maintenance payments and other miscellaneous sources of income. On the other hand, war service disability pensions paid by Canada or an ally of Her Majesty at the time of the war service, unemployment insurance benefits, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family allowances do not have to be included in the computation of income.

In computing his income for a taxation year, an individual who is carrying on business may deduct business expenses including depreciation (called capital cost allowances), interest on borrowed money, reserves for doubtful debts, contributions to pension plans or deferred profit-sharing plans for his employees, bad debts, and expenses incurred for scientific research. In general, no deductions are allowed in computing income from salary and wages, although there are exceptions such as travelling expenses of employees who have to travel as they perform their work (such as employees on trains), union dues, alimony payments and contributions to registered pension plans. Individuals may deduct, within limits, amounts set aside to provide a future income under registered retirement savings plans. Students attending universities, colleges, high schools, public schools or certain other certified educational institutions in Canada may deduct their tuition fees if they exceed \$25 per annum. Students in full-time attendance at universities outside Canada may deduct their tuition fees.

Having computed his income, the individual then calculates his taxable income by deducting certain exemptions and deductions. These exemptions and deductions are as follows: for single status, \$1,000; for married status, \$2,000; for dependent children eligible to receive family allowance,* \$300 per child; for other dependants (as defined in the law), \$550 per dependant; where the taxpayer is 70 years of age or over (or between 65 and 70

* Family allowances are monthly welfare payments by the Federal Government to the parents or guardians of children under 16 years of age. The allowance is \$6 for each child under 10 years of age and \$8 for each child between the ages of 10 and 16. These allowances are not subject to income tax. Payments are also made in respect of children between the ages of 16 and 18 in full-time attendance at educational institutions; such payments of \$10 a month are called youth allowances. The right to deduct \$550 for a dependent child is not affected by the receipt of these youth allowances.

years of age and not in receipt of an old age security pension), an additional \$500; where the taxpayer is blind or confined to a bed or a wheelchair, an additional \$500; charitable donations, up to 10 p.c. of income; and medical expenses, in excess of 3 p.c. of income. In lieu of claiming deductions for charitable donations and medical expenses, an individual may claim a standard deduction of \$100.

As already stated, an individual who is resident in Canada is taxed on his income from both inside and outside Canada. An individual who is not resident in Canada at any time during the year but who carries on business in Canada or who earns salary or wages in Canada is taxed only on the income earned in Canada. In computing taxable income earned in Canada, such a non-resident individual is allowed to deduct that part of the exemptions and deductions that may reasonably be attributed to the income earned in Canada. (A non-resident who derives investment income from Canada is taxed in a different way described on p. 1015.) An individual who ceases to be a resident of Canada during the year or who becomes a resident during the year so that he is resident for only part of the year will be subject to income tax in Canada on only that part of his income for the year received while he is resident in Canada. In these circumstances, the deductions from income permitted for determining taxable income will be the amount that may reasonably be considered as applicable to the period during which he is resident in Canada.

A progressive schedule of rates is applied to taxable income, beginning at 11 p.c. on the first \$1,000 of taxable income and increasing to 80 p.c. on taxable income in excess of \$400,000. In addition, an old age security tax is levied on taxable income at the rate of 4 p.c. with a maximum of \$240 reached at \$6,000 of taxable income.

After calculating income tax using this progressive schedule of rates, an individual is allowed a deduction from his tax under four main headings. (1) *Dividend Tax Credit*—to partially eliminate the double taxation of corporate profits and to encourage participation in the ownership of Canadian companies, Canadian resident individuals are allowed to deduct from their tax an amount equal to 20 p.c. of the net dividends they receive from Canadian taxable companies. (2) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax related to such income. (3) *Abatement under Federal-Provincial Fiscal Arrangements*—in 1968 the federal personal income tax otherwise payable on income of a resident of a province and on income earned in a province is reduced by 28 p.c., except in the case of income earned in Quebec or received by a resident of Quebec where it is reduced by 50 p.c. (see p. 1010). (4) *General Tax Reduction*—in 1968 all individuals may deduct from their tax an amount equal to the lesser of 20 p.c. of their basic tax or \$20. "Basic tax" is personal income tax, excluding the old age security tax, after deduction of the dividend tax credit but before the abatement for provincial income tax.

A supplementary budget presented by the Minister of Finance on Nov. 30, 1967, announced that, effective Jan. 1, 1968, a surtax equal to 5 p.c. of basic tax in excess of \$100 is to be levied on personal income. This surtax is not to exceed \$600.*

To a very large extent, individual income tax is payable as the income is earned. Taxpayers in receipt of salary or wages have tax deducted from their pay by their employer and in this way pay nearly 100 p.c. of their tax liability during the calendar year. The balance of the tax, if any, is payable at the time of filing the tax return on or before Apr. 30 in the following year. Persons with more than 25 p.c. of their income from sources not subject to tax deductions must pay tax by quarterly instalments throughout the year and returns must be filed on or before Apr. 30 in the following year. Farmers and fishermen pay two thirds of their tax on or before Dec. 31 each year and the remainder on or before Apr. 30 in the following year.

* The Bill implementing the levying of this surtax was defeated in the House of Commons on Feb. 19, 1968; the surtax was subsequently (SC 1967-68 c. 38) set at 3 p.c.

The following statement shows what taxpayers pay (1968) at various levels of income. In calculating these taxes it has been assumed that all taxpayers take the standard deduction of \$100 and no allowance has been made for the 20-p.c. dividend tax credit.

<i>Status</i>	<i>Income</i>	<i>Income Tax</i>	<i>Old Age Security Tax</i>
	\$	\$	\$
Single taxpayer—no dependants.....	1,200	9	4
	1,500	35	16
	2,000	79	36
	2,500	149	56
	3,000	223	76
	5,000	595	156
	10,000	1,907	240
	20,000	6,091	240
	50,000	21,545	240
	100,000	51,435	240
Married taxpayer—no dependants.....	2,200	9	4
	2,500	35	16
	3,000	79	36
	5,000	398	116
	10,000	1,596	240
	20,000	5,619	240
	50,000	20,995	240
	100,000	50,785	240
Married taxpayer—two children eligible for family allowances.....	2,800	9	4
	3,000	26	12
	5,000	291	92
	10,000	1,432	240
	20,000	5,335	240
	50,000	20,665	240
	100,000	50,395	240

The income taxes shown above are the combined federal and provincial taxes in all provinces where the provincial tax is the same as the federal abatement (i.e., in all provinces except Quebec, Manitoba and Saskatchewan). In Quebec the provincial tax approximates the federal abatement; in Manitoba and Saskatchewan the provincial tax exceeds the abatement by five percentage points.

Corporation Income Tax

The Income Tax Act levies a tax upon the income from everywhere in the world of corporations resident in Canada and upon the income attributable to operations in Canada of non-resident corporations carrying on business in Canada. In computing their income, corporations may deduct operating expenses including municipal real estate taxes, reserves for doubtful debts, bad debts, and interest on borrowed money. They may not deduct provincial income taxes other than provincial taxes on income derived from mining operations. (For this purpose "income from mining operations" is specially defined.)

Regulations covering capital cost allowances (depreciation) permit taxpayers to deduct over a period of years the actual cost of all depreciable property. The yearly deductions of normal capital cost allowances are computed on the diminishing balance principle. (Taxpayers engaged in farming and fishing may choose between this and the straight-line method.) Published regulations establish a number of classes of property and maximum rates. There is provision for recapture of any amount allowed in excess of the ultimate net capital cost of any asset.

Expenditures on scientific research related to the business of the taxpayer may be written off for tax purposes in the year when incurred.

Taxpayers operating mines, oil wells, gas wells and wells for extracting potash by the solution method are allowed a depletion allowance, usually computed as a percentage of profits derived from mineral, oil or gas production, which continues as long as the mine or well is in operation. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets used by the taxpayer and the deduction of explora-

tion and drilling expenses. Taxpayers operating timber limits receive an annual allowance sometimes called a depletion allowance. This is a rateable proportion of the amount invested in the limit and is based on the amount of timber cut in the year. When the amount invested in the limit has been recovered, no further allowance is given.

In computing taxable income, corporations may deduct dividends received from other Canadian taxpaying corporations and also from foreign corporations in which the Canadian corporation has at least 25 p.c. stock ownership. Business losses may be carried back one year or forward five years and deducted in computing taxable income. Corporations may also deduct donations to charitable organizations up to a maximum of 10 p.c. of their income.

The general rates of tax on corporate taxable income are 18 p.c. on the first \$35,000 of taxable income and 47 p.c. on taxable income in excess of \$35,000. Corporations deriving more than one half of their gross revenue from the sale of electric energy, gas or steam pay tax on their taxable income from such sources at the rate of 18 p.c. on the first \$35,000 of taxable income and 45 p.c. on taxable income in excess of \$35,000.* Corporations that qualify as investment companies pay a tax of 18 p.c. on their taxable income. In addition to these rates, all corporations pay an old age security tax of 3 p.c. of taxable income, bringing their rates up to 21 p.c. and 50 p.c. (21 p.c. and 48 p.c. for the public utility companies and 21 p.c. for investment companies).

In calculating the amount of their income tax, corporations are allowed a deduction from tax under three headings. (1) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be deducted from Canadian income tax but the deduction may not exceed the proportion of Canadian tax relative to such income. (2) *Abatement under Federal-Provincial Fiscal Arrangements*—corporations may deduct from their federal tax otherwise payable a tax abatement equal to a fixed percentage of their taxable income attributable to operations in a Canadian province. This abatement is to make room for the provincial income tax levied by each Canadian province. The amount of the abatement is 10 p.c. of taxable income attributable to operations in each province. (3) *Provincial Logging Tax*—corporations may deduct from their federal tax otherwise payable an amount equal to two thirds of a provincial tax on income from logging operations not exceeding two thirds of 10 p.c. of the corporation's income from logging operations in the province. (At present only Ontario, Quebec and British Columbia impose logging taxes—see p. 1021.)

Income from the operation of a new mine, including wells for extracting potash by the solution method, is exempt from income tax during the first 36 months after coming into commercial production.

Corporations are required to pay their tax (combined income and old age security tax) in monthly instalments but the period during which they pay tax for a taxation year does not coincide with that taxation year. The supplementary budget presented on Nov. 30, 1967† announced a speed-up of corporation income tax payments to bring them more closely in line with the taxation year to which they relate. For taxation years beginning during the period Dec. 1, 1967 to Nov. 30, 1968, corporations are required to make monthly payments equal to one tenth of their estimated tax for the year (such estimate to be based on the taxable income of the previous year or on an estimated taxable income of the year in progress). These payments are to be completed by the last day of the second month following the close of the taxation year. This advances the payment schedule of corporation income tax by two months. Any balance of tax owing is to be paid by the last day of the third month following the close of the taxation year. For taxation years starting after Nov. 30, 1968, corporations will have to begin their monthly tax payments in the third month of their taxation year and to make their final instalment by the last day of the second month following the termination of the year. Each monthly remittance will be equal to one twelfth of the estimated tax for the year

* 95 p.c. of the federal tax collected from these corporations is remitted to the provinces.

† Implemented by Act of Parliament passed Mar. 15, 1968 (SC 1967-68, c. 38) which also levied a 3-p.c. surtax on corporation income.

(again based on either the taxable income of the previous year or the estimated taxable income of the year in progress). Any balance of tax outstanding will have to be paid by the last day of the third month following the close of the taxation year and the return for the year will have to be filed by the last day of the sixth month following the close of the taxation year.

Taxation of Non-residents

A non-resident is liable for payment of income tax if he was employed or was carrying on business in Canada during a taxation year. The expression "carrying on business in Canada" includes (1) maintaining a permanent establishment in Canada, (2) processing goods even partially in Canada, and (3) entering into contracts in Canada. The taxable income of a non-resident thus derived is taxed under the same schedule of rates as a Canadian resident (personal or corporation income tax rates as the case may be). (Tax treaties with some countries provide certain exemptions from tax for remuneration for services performed in Canada by residents or employees of these countries. They also prohibit Canada taxing profits of a non-resident enterprise unless that enterprise has a permanent establishment in Canada.)

Profits earned in Canada by a non-resident corporation carrying on business through a branch or permanent establishment in Canada are taxed at the regular rates of corporation income tax and are also subject to an additional tax of 15 p.c. This additional tax is imposed on profits attributable to the branch after deducting therefrom Canadian federal and provincial income taxes and an allowance in respect of the net increase in capital investment in property in Canada.

Furthermore, the Income Tax Act imposes a tax at the rate of 15 p.c. on certain forms of income going from Canada to non-resident persons. It applies to interest (other than interest on government bonds issued after Apr. 15, 1966, interest on certain bonds issued before Dec. 20, 1960 and interest paid to certain exempt lenders), dividends, rentals, royalties, income from a trust or estate and alimony, and applies whether the income goes to non-resident individuals or to corporations. The rate is reduced to 10 p.c. in the case of dividends paid by a company that has a degree of Canadian ownership* and is also 10 p.c. on royalties from motion picture films. This non-resident tax is withheld at the source by the Canadian payer. Non-residents who receive only this kind of income from Canada do not file returns in Canada.

Gift Tax

The Income Tax Act levies a tax upon gifts. The rates range from 10 p.c. on an aggregate taxable value of \$5,000 or under to 28 p.c. on an aggregate taxable value of over \$1,000,000. Exemptions include complete exemption of gifts of \$1,000 or less per donee and a general deduction of \$4,000 (in addition to the complete exemption of \$1,000 or less per donee) from aggregate taxable value of gifts made in the year.

Estate Tax

This tax applies to property passing, or deemed to pass, at death. All the property of persons who were domiciled in Canada before their death must be taken into consideration no matter where that property is situated; for persons dying domiciled outside of Canada only their property situated in Canada is subject to tax.

In computing the tax of a Canadian domiciliary, the value of the whole estate is first determined. Once the aggregate value of the estate has been determined, estate debts and certain expenses may be deducted. From the resulting "aggregate net value" there may be deducted the amount of a basic exemption, which is increased where the deceased

* Generally, a corporation is regarded as having a degree of Canadian ownership where 25 p.c. of its equity and voting shares are owned by Canadians and/or corporations controlled in Canada, or where the voting shares of the corporation are listed on a Canadian stock exchange and no more than 75 p.c. of its issued outstanding voting shares are owned by a non-resident alone or in combination with related persons.

leaves a widow or dependent child, and also the amount of any charitable bequests to charitable organizations in Canada. After these deductions the amount left is the "aggregate taxable value" to which are applied the tax rates. From the tax so calculated may be deducted (1) a tax abatement in respect of property situated in a province that levies a succession duty, (2) a credit for gift tax paid on gifts made within three years of death (the value of which must be included in the aggregate net value of the estate), and (3) a credit for foreign taxes.

If an estate is valued at \$50,000 or less, no tax is exacted; this figure of \$50,000 is not a deductible exemption but simply an amount at or below which no tax is levied. If an estate is valued at more than \$50,000, it may or may not be taxable, depending on its size and the exemptions and deductions for which it qualifies, but in no case must the tax reduce the value of the estate after tax to less than \$50,000. The deductible exemption is \$60,000 in respect of a deceased male survived by a spouse or in respect of a deceased female survived by an incapacitated spouse and a dependent child. In both cases there is an additional exemption of \$10,000 for each surviving child who is dependent (generally, under age 21). In all other cases the exemption is \$40,000 but if the deceased is survived by a dependent child (an orphan), there is an additional exemption of \$15,000 in respect of each orphan.

The tax on the estates of Canadian domiciliaries is calculated by applying a graduated scale of rates. For an aggregate taxable value of \$5,000, or less, the rate is 10 p.c. For an aggregate taxable value of \$100,000, the tax is \$19,000 and anything between \$100,000 and \$150,000 is taxed at 24 p.c. At \$2,000,000 of taxable value, the tax is \$816,500 and the excess over \$2,000,000 is chargeable at the highest rate of 54 p.c.

As stated previously, there is an abatement from federal estate tax otherwise payable in respect of provincial succession duties. The abatement is a deduction of 75 p.c. from the federal tax otherwise payable in respect of property situated in a province that levies succession duties (see footnote, p. 1010).

The property situated in Canada of a deceased person not domiciled in Canada is subject to estate tax at a flat rate of 15 p.c. No deduction is allowed against the assessed value of such property except for debts specifically chargeable to it. However, there is a special provision that exempts all such property of less than \$5,000 value and also provides that the tax must not reduce the value of the property to less than \$5,000. (The Estate Tax Convention between Canada and the United States increases this figure to \$15,000.) Where property is subject to provincial duties, the 15-p.c. tax is abated by 75 p.c. (see footnote, p. 1015).

Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. Both the sales tax and the special excise taxes are levied on goods imported into Canada and on goods produced in Canada. They are not levied on goods exported. The sales tax, which is at the rate of 9 p.c., is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid value of goods imported into Canada. For alcoholic beverages and tobacco products, the sale price for purposes of the sales tax includes excise duties levied under the Excise Act (see p. 1017). An old age security tax of 3 p.c. is levied on the same basis as the 9-p.c. tax, bringing the total sales tax to 12 p.c.

Many classes of goods are exempt from sales tax. Foodstuffs, drugs, electricity and fuels for lighting or heating are generally exempt as are articles and materials used by public hospitals and certain welfare institutions. The products of farms, forests, mines and fisheries are, to a large extent, exempt as well as most equipment used in farming and fishing. Production machinery and equipment and materials consumed or expended in production are not taxed. Also, a variety of items are exempt from sales tax when purchased by municipalities. These and other exemptions are set forth in schedules to the Excise Tax Act.

A number of articles are subject to special excise taxes in addition to the sales tax. Where these are ad valorem taxes they are levied on the same price or duty-paid value as the general sales tax. Those levied at present are as follows:—

Cigarettes.....	3 cents per 5 cigs.
Cigars.....	17½ p.c. ad valorem
Jewellery, including clocks, watches, articles of ivory, amber, shell, precious or semi-precious stones, goldsmiths' and silversmiths' products except gold-plated or silver-plated ware for the preparation or serving of food or drink.....	10 p.c. ad valorem
Lighters.....	10 cents per lighter
Playing cards.....	20 cents per pack
Radios.....	the greater of \$2 per radio or 15 p.c. ad valorem
Phonographs and television sets.....	15 p.c. ad valorem
Tubes for radios, phonographs and television sets, not including television picture tubes, priced under \$5 per tube.....	10 cents per tube
Television set picture tubes.....	15 p.c. ad valorem
Slot machines—coin, disc or token-operated games or amusement devices.....	10 p.c. ad valorem
Matches.....	10 p.c. ad valorem
Tobacco—pipe tobacco, cut tobacco and snuff.....	90 cents per lb.
Tobacco pipes, cigar and cigarette holders and cigarette rolling devices.....	10 p.c. ad valorem
Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc.....	10 p.c. ad valorem
Wines—	
Manufactured in Canada—*	
Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume.....	25 cents per gal.
Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit.....	50 cents per gal.
Sparkling wines.....	\$2.50 per gal.
Additional tax applying to all wines whether imported or produced in Canada—	
Wines of all kinds containing not more than 7 p.c. of absolute alcohol by volume.....	2½ cents per gal.
Wines of all kinds containing more than 7 p.c. of absolute alcohol by volume.....	5 cents per gal.
Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or foreign companies.....	10 p.c. of net premium for property, surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.)

All the foregoing items, except the last, are also subject to the general sales tax of 9 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco are subject to further taxes, referred to as excise duties (see p. 1018).

Excise Duties

The Excise Act levies taxes (referred to as excise duties) upon alcohol, alcoholic beverages and tobacco products produced in Canada. These duties are not levied on imported goods but the customs tariff on these products includes a levy to correspond with the duties levied on domestic production. These duties are not levied on goods exported.

Spirits.—The duties are on a per-gallon basis in proportion to the strength of proof of the spirits. These duties do not apply to denatured alcohol intended for use in the arts and in industry, or for fuel, light or power, or for any mechanical purpose. The various duties are as follows:—

On every gallon of the strength of proof distilled in Canada.....	\$14.25
On every gallon of the strength of proof used in the manufacture of—	
Medicines, extracts, pharmaceutical preparations, etc.....	\$1.50 per gal.
Approved chemical compositions.....	15 cents per gal.
Spirits sold to a druggist and used in the preparation of prescriptions.....	\$1.50 per gal.
Imported spirits when taken into a bonded manufactory in addition to other duties.....	30 cents per gal.
Approved chemical compositions.....	15 cents per gal.
Spirits sold to a druggist and used in the preparation of prescriptions.....	\$1.50 per gal.
Imported spirits when taken into a bonded manufactory, in addition to other duties.....	30 cents per gal.

* The customs tariff on wines includes a levy to correspond to these taxes on domestic production.

Canadian Brandy.—Canadian brandy, a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials, is subject to a duty of \$12.25 per gallon.

Beer.—All beer or other malt liquor is subject to a duty of 42 cents per gallon.

Tobacco, Cigars and Cigarettes.—The excise duties make up nearly as large a part of the total tax on tobacco products as the special excise taxes already described. The rates are as follows:—

On manufactured tobacco of all descriptions, except cigarettes.....	35 cents per lb.
Cigarettes weighing not more than 3 lb. per thousand (nearly all of the cigarettes used in Canada are of this type).....	\$4.00 per thousand
Cigarettes weighing more than 3 lb. per thousand.....	\$5.00 per thousand
Cigars.....	\$2.00 per thousand
Canadian raw leaf tobacco when sold for consumption.....	10 cents per lb.

Combined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act gives the following total taxes:—

Cigarettes.....	\$10.00 per thousand (or 20 cents per pack of 20 cigarettes) plus the 12-p.c. sales tax on the manufacturer's sale price
Manufactured tobacco.....	\$1.25 per lb. plus the 12-p.c. sales tax on the manufacturer's sale price
Cigars.....	\$2.00 per thousand plus the 17½-p.c. special excise tax and the 12-p.c. sales tax on the manufacturer's sale price.

Customs Duties*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties, which once were the chief source of revenue for the country, have declined in importance as a source of revenue to the point where they now provide less than 10 p.c. of the total. Quite apart from its revenue aspects, however, the tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly to Canada from countries within the Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the Preferential or Most-Favoured-Nation treatment. Few countries are in this category and, in terms of trade coverage, are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates that apply on any particular item may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

* See also pp. 990-991.

Subsection 2.—Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. All provinces levy a tax on the income of individuals and corporations resident within their boundaries or deriving income from activities or operations carried out therein. Only the Provinces of Ontario and Quebec impose special taxes on corporations in addition to income tax and only the Provinces of Ontario, Quebec and British Columbia impose a tax on property passing at death; the remaining provinces receive payment from the Federal Government of their 75-p.c. share of estate tax levies. Under the terms of the existing federal-provincial fiscal arrangements, the Federal Government makes "equalization payments" to some provinces in recognition of the fact that the potential tax yield in those provinces, measured on a per capita basis, is lower than the national per capita tax yield. For some provinces the equalization payments constitute a very important source of revenue.

Some of the more important provincial levies are reviewed briefly on this and following pages.

Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundaries or who earn income therein. In nine of the ten provinces, these taxes are computed as a percentage of federal "basic tax". As previously explained, "basic tax" is federal income tax (excluding old age security tax) otherwise payable at full federal rates before the abatement under the Federal-Provincial Fiscal Arrangements and before allowance for the federal tax reduction passed in 1966. These provincial taxes are collected by the Federal Government on behalf of these provinces. In Quebec, provincial income tax is levied at graduated rates that progress from 5.5 p.c. on the first \$1,000 of taxable income to a maximum of 40.0 p.c. on the excess over \$400,000. The determination of taxable income for Quebec tax is based on exemptions and deductions which, with the exception of deductions for dependent children eligible for family allowances,* are similar to those for federal tax. Quebec taxpayers whose net income does not exceed \$4,000 if married or in a situation recognized as equivalent and \$2,000 in other cases are exempt from payment of the tax. If the taxpayer's income exceeds such amounts, the tax to be paid will not reduce his income to less than \$4,000 or \$2,000 as the case may be. The Province of Quebec collects its own tax.

The percentages that provincial income tax liability is of federal "basic tax" for 1967 are: Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia each 28 p.c., Quebec approximately 50 p.c., and Manitoba and Saskatchewan each 33 p.c.

Corporate Income Tax

All provinces levy a tax on the profits of corporations derived from activities carried out within their boundaries. In all provinces except Ontario and Quebec the provincial tax imposed on taxable income in the province is determined on the same basis as for federal income tax. In Ontario and Quebec the determination of taxable profits for purposes of provincial tax follows closely the federal rules. The rate of tax in Prince Edward Island, Nova Scotia, New Brunswick, Alberta and British Columbia is 10 p.c. of corporate taxable income. The rate that applies in Newfoundland, Manitoba and Saskatchewan is 11 p.c., and in Ontario and Quebec 12 p.c.

Five of the ten provinces levy corporate income taxes at rates in excess of the abatement allowed by the Federal Government. This abatement is equal to 10 p.c. of corporate profits for all provinces. All provinces except Ontario and Quebec have signed agreements for the collection of their income taxes by the Federal Government.

* Quebec has a family allowance program which supplements the federal program; it provides for allowances that increase from \$30 per annum for a first child to a maximum of \$70 per annum for a sixth and for each additional child. The Quebec program is in lieu of exemptions for provincial income tax purposes for children eligible for family allowances.

Taxes on Alcoholic Beverages and Tobacco

Generally speaking, the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over alcoholic beverages. The provincial mark-up over the manufacturer's price is the effective means of taxation. Beer and wine may be sold by retailers or government stores, depending on the province, but in all cases these sales contribute to provincial revenues.* The Province of Prince Edward Island imposes a tax of 10 p.c. on all beer, wine and spirits sold at retail, collected under authority of the Health Tax Act.

Newfoundland imposes a tax on tobacco sold at retail of one quarter of one cent per cigarette purchased; from one to five cents per cigar, depending on price; and one cent per half ounce or less of other tobacco. Prince Edward Island's tax on tobacco sold at retail is one fifth of one cent per cigarette purchased; from one to three cents per cigar, depending on price; and 10 p.c. of the retail price of all other tobacco purchased. Nova Scotia charges a 5-p.c. hospital tax on all alcoholic beverages. Saskatchewan's tax on retail tobacco sales is one fifth of one cent per cigarette purchased; from one to five cents per cigar, depending on price; and one cent on every half ounce of other tobacco; the average rate of the tobacco tax is 10 p.c. Specific sales taxes on tobacco products are also levied in New Brunswick, Quebec, Manitoba and Ontario.

Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. All provinces except Alberta levy this type of tax at rates varying from 5 p.c. to 8 p.c. These direct levies apply to tangible taxable commodities sold, with varying exemptions, for consumption in the province and to a few selected services, for example: to telephone services in all provinces; in Quebec to telecommunications, meals and hotel and motel charges; in Newfoundland, since January 1967, to consumers engaged in the construction of the Northumberland Strait Crossing; and in Manitoba to a broad range of services including dry cleaning, furniture repairs, motel accommodation, etc. The sales taxes do not apply to goods sold for delivery in other provinces or to exported commodities. All provinces imposing sales taxes provide comprehensive exemptions for foodstuffs and drugs.

Amusement Taxes

Each of the provinces with the exception of Alberta, Saskatchewan, British Columbia and Quebec has a tax on admission to places of entertainment. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 15 p.c. In Newfoundland it is five cents per admission regardless of the admission price.

Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and truckers. The rates vary from 12 cents per gallon in Alberta to 19 cents in Nova Scotia and Newfoundland. The amount of tax borne by one gallon of motor vehicle fuel in each province is as follows:—

Gasoline	Diesel Fuel		Gasoline	Diesel Fuel
cts.	cts.		cts.	cts.
Newfoundland.....	20		Ontario†.....	16
Prince Edward Island**	18		Manitoba.....	17
Nova Scotia.....	19		Saskatchewan†.....	15
New Brunswick.....	18		Alberta.....	12
Quebec.....	16		British Columbia...	13
				15

* The provincial mark-up over the manufacturer's price is not considered a "tax" in DBS financial statistics, but forms part of the "profits of government business enterprises".

** Gasoline and diesel fuel used by primary producers—farmers, fishermen, manufacturers and processors—is exempt from tax as is also gasoline and motor fuel used by owners or operators of registered pleasure craft and skis-tows, and that used by consumers engaged in the construction of the Northumberland Strait Crossing.

† Some relief from taxation is given where gasoline or fuel oil is used for farming, manufacturing, commercial fishing and other off-highway purposes.

‡ Gasoline and diesel fuel used by farmers in farm trucks are exempt from tax.

†† Generally, fuel oil used for agricultural and industrial purposes is exempt from tax.

The British Columbia net tax rate (after refund) on gasoline used in logging trucks off highway, in power units of motor vehicles for stationary industrial use, and in vehicles used by amputees, paraplegics and certain war disability pensioners is one cent per gallon. Gasoline coloured purple for certain off-highway use (including marine) and motor fuels, being any fuel except gasoline not consumed on provincial highways, is also taxed at one cent per gallon. Fuel oil used for heating purposes is taxed at one half cent per gallon.

Motor Vehicle Licences and Fees

Each province levies a fee on the annual registration of motor vehicles, which is compulsory. Upon registration a vehicle is issued with licence plates. The rates of fee vary from province to province and, in the case of passenger cars, may be assessed on the weight of the vehicle, the wheel base, the year of manufacture, the number of cylinders of the engine, or at a flat rate. The fees for commercial motor vehicles and trailers are based on the gross weight for which the vehicle is registered, i.e., the weight of the vehicle empty plus the load it is permitted to carry. Every operator or driver of a motor vehicle is required to register periodically and pay a fee for a new driver's licence. The licences are valid for periods of from one to five years and the fees vary from \$1 to \$7 a year.

Taxes on Mining Operations

All provinces except Prince Edward Island levy taxes of various kinds on mining operations. All provinces except Prince Edward Island and Alberta impose a tax on the income of firms engaged in mining operations in general or in specific kinds of mining operations. The Provinces of British Columbia, Alberta, Saskatchewan and Manitoba impose a tax on the assessed value of minerals or a flat rate per acre of mining property. Ontario imposes a tax on the profit on the assessed value of minerals and a flat rate per acre of mining property. Manitoba imposes rates of from 6 p.c. to 11 p.c. on mining royalties. The British Columbia mining tax rate is 10 p.c. on net income from mining in excess of \$25,000; new mines are exempt for three years.

Tax on Logging Operations

The Provinces of Quebec, Ontario and British Columbia levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In Quebec and Ontario the rate is 10 p.c. on net income where in excess of \$10,000 (in Quebec if the net income is greater than \$10,000 the whole amount is taxable with no basic exemption) and in British Columbia the logging tax allowed as a deduction from the provincial corporate income tax was increased from 18 p.c. to 20 p.c. effective in the 1967 taxation year. In Ontario and Quebec one third and in British Columbia 18 p.c. of the tax is allowed as a deduction from provincial corporate income tax or, in Quebec, from the provincial income tax; the remainder is deductible from federal income tax.

Business Taxes

The Province of Quebec imposes a tax of one tenth of 1 p.c. on paid-up capital of corporations and Ontario levies a similar tax at the rate of one twentieth of 1 p.c.

The Provinces of Quebec and Ontario have a place-of-business tax. In Quebec, the tax is generally \$50 but is reduced to \$25 when the paid-up capital is less than \$25,000; in the case of loan companies, the tax is \$100 when capital paid up is \$100,000 or more. In Ontario, the tax for each permanent establishment is the lesser of \$50 or one twentieth of 1 p.c. of the paid-up capital of the corporation involved, but the total of the capital tax and the place-of-business tax cannot be less than \$20. Ontario also imposes an office tax of \$50 on every corporation that does not maintain a permanent establishment in the province but merely maintains a buying office, or merely holds certain provincial licences, or merely holds assets. A corporation that does not maintain a permanent establishment in Ontario

but is represented by a resident employee or agent who is not deemed to operate a permanent establishment of the corporation in the province must pay an office tax of \$50 or one tenth of 1 p.c. of the total amount of its gross Ontario sales or revenue if less than \$50,000, subject to a minimum office tax of \$5.

Both provinces levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies and sleeping-car, parlour-car and dining-car companies. In Ontario, these special taxes (except the tax payable by insurance corporations calculated on gross premiums) and the capital and place-of-business taxes are payable only to the extent that they exceed the corporate income tax otherwise payable.

The Province of Prince Edward Island charges special annual licence fees to most insurance companies, banks, acceptance companies, chain theatres and chain stores, steamship companies, telephone, telegraph and electric light companies and brokers, as well as nominal licence fees to other incorporated companies, the latter being similar to filing fees in other provinces.

Land Transfer Taxes

The Provinces of Ontario, Manitoba and Alberta levy a tax based on the price at which ownership of land is transferred. In Ontario, one fifth of 1 p.c. is imposed on the purchase price up to \$25,000 and two fifths of 1 p.c. on anything in excess of that amount. In Manitoba the rate is 1 p.c. In Alberta, registration fees proportionate to the conveying services rendered are charged and in the case of transfers and mortgages the fees are assessed on the value of the land transferred as on the amount of the mortgage. In addition, there is an Assurance Fund fee charged on transfers and mortgages which guarantees titles in certain circumstances. In Quebec, a tax of $2\frac{1}{2}$ p.c. of the purchase price is imposed only when property is transferred under the Bankruptcy or Winding-Up Act. British Columbia and Saskatchewan do not have a land transfer tax but have an equivalent in land title fees which are based on land values.

Tax on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in both provinces are:—

Shares sold, transferred or assigned valued at—

Under \$1.....	$\frac{1}{10}$ th of 1 p.c. of value
\$ 1 to \$ 5.....	$\frac{1}{2}$ cent per share
\$ 5 to \$ 25.....	1 cent per share
\$25 to \$ 50.....	2 cents per share
\$50 to \$ 75.....	3 cents per share
\$75 to \$150.....	4 cents per share
Over \$150.....	4 cents per share plus $\frac{1}{10}$ th of 1 p.c. of value in excess of \$150
Bonds and debentures.....	3 cents for every \$100 or fraction thereof of par value.

Tax on Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies relative to risks incurred in the province. Saskatchewan imposes a tax of 1 p.c. on the motor vehicle premium income of insurance companies to finance a comprehensive high school driver-training program.

Succession Duties

Only the Provinces of Ontario, Quebec and British Columbia levy succession duties. These duties are a tax upon the right to succeed to property and are assessed upon the interest or benefit passing at death to an heir or beneficiary. The three provinces impose succession duties on all property situated in the province belonging to the deceased and

passing at his death whether the deceased was domiciled in the province or elsewhere. Personal property wherever situated of a person dying domiciled within the province is also liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are generally governed by the value of the estate, the relationship of the beneficiary to the deceased and the amount going to any one person. The rate of tax increases as the degree of relationship between the deceased and his successor becomes more remote.

Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta, while not imposing succession duties, each receives 75 p.c. of the Federal Government estate tax levied on property situated within its borders. The Alberta share of estate taxes is rebated in full where the deceased was a bona fide resident of the province.

Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes at varying rates according to class for provincial revenue. Improved forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at one half of 1 p.c.; wild land at 3 p.c.; coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at 1½ p.c. In unorganized (non-municipal) areas, Ontario levies a property tax of 1½ p.c. of assessed value; the minimum annual tax in respect of any land is \$6. New Brunswick levies a tax of \$1.50 per \$100 market value assessment on all land and buildings in the province and a similar tax on business occupancy, to finance education, health, welfare and justice services. Nova Scotia also imposes property taxes of limited application.

Race Track Taxes

Ontario levies a tax on operators of race meets and on holders of winning tickets issued under the pari-mutuel system. The tax on race-meet operators is imposed at the rate of \$1 for each day the meet is conducted. Holders of winning tickets must pay a tax equal to 6 p.c. of the amount that would be payable to them if no percentage were deducted by the person holding the race meet. A number of other provinces levy a pari-mutuel tax on money bet in the province on horse races; in Newfoundland the rate is 11 p.c., in Prince Edward Island 10½ p.c., in Nova Scotia 11 p.c. on the first \$400,000 wagered and a reduced percentage on any additional money wagered (some of this money is refundable to the individual race tracks), in New Brunswick 5½ p.c., in Manitoba 10 p.c., in Alberta and Saskatchewan 5 p.c., and in Quebec 7 p.c. on ordinary pools and 9 p.c. on special pools (quinella and daily-double). In British Columbia the tax is 12 p.c. but the province returns 2½ p.c. of money bet to horsemen and track operators for purses, etc.

Miscellaneous Provincial Taxes

In Nova Scotia a fire marshal's tax is levied at the rate of one half of 1 p.c. on premiums paid for fire insurance in the province. A tax is also levied on long-distance telephone calls at the rate of five cents on the first 50 cents with a five-cent minimum and five cents on each additional 50 cents, applying only to calls made within the province.

Subsection 3.—Municipal Taxes

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value or, as in Nova Scotia and New Brunswick, of the actual

market value. The revenues from such taxes are used generally to pay for street maintenance, schools, police and fire protection, snow removal in certain communities and other community services; in New Brunswick the municipal levy is used only for property service. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property such as sidewalks, roads and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied, depending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan, municipalities are empowered to levy an amusement tax on the admission of persons to places of entertainment, although the amusement tax is generally a provincial preserve (see p. 1020). Electricity and gas are taxed at the consumer level in some western municipalities and in some New Brunswick municipalities, and coal and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal and certain Ontario municipalities impose a tax on the gross receipts of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. Three bases of assessment are in use—a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax but others charge both a licence fee and a business tax.

Subsection 4.—Miscellaneous Levies

These are not generally referred to as taxes but they are similar to taxes in many ways.

Unemployment Insurance

A national program of unemployment insurance operates in Canada. Essentially, it provides relief to those qualified persons who temporarily find themselves without work. It is administered by a federal commission appointed for this purpose and financed by equal contributions from employers and employees plus a contribution from the Federal Government. The amount paid into the fund by employee and employer is directly proportional to the weekly wages of the employee. The rates of contributions, together with statistics on the operation of the program, are given at pp. 781-785.

Workmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes establish an accident fund administered by a Board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 785-787.

Hospital Insurance

A federal-provincial hospital insurance plan has been adopted by each of the ten Canadian provinces. Under this arrangement, the Federal Government pays approximately one half of the cost of hospitalization for patients who are participants under the plan. The provinces meet the remainder of the cost. Provincial revenues for this purpose are raised by various means. The Province of Quebec has increased its personal and corporation income tax. Certain provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such

provinces non-salaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 296-298.

Canada and Quebec Pension Plans

In 1966 the Canada Pension Plan, a compulsory government-operated pension program, was introduced whereby each contributor builds up a right to a graduated pension, the amount of which is related to his earnings up to a certain level. This graduated benefit will supplement the universal old age security pension which is paid out of tax revenues. It operates throughout the country except in the Province of Quebec where a similar pension plan is operated by the government of the province. Both plans have disability and survivor benefits. They are described at pp. 326-329.

Section 3.—Federal Government Finance

Subsection 1 of this Section contains financial statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the *Canada Gazette*. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The *Canada Gazette* presentation is included because there is interest in and use for information on this basis.

Guaranteed Debt.—In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act, the guaranteed bonds and debentures of the Canadian National Railways and the guarantee of deposits maintained by the chartered banks in the Bank of Canada. The remainder consists chiefly of guarantees of loans made by chartered banks to the Canadian Wheat Board, to farmers and to university students and of guarantees under the Export Credits Insurance Act.

	398,000,000	232,037,000

¹ In addition, the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1965 amounted to approximately \$13,876,000. Against this amount was a reserve of \$3,957,000 held by Central Mortgage and Housing Corporation.

² These contingent liabilities are expressed in Canadian dollars; they are payable solely in United States dollars and are converted on the basis of \$1 U.S. = \$1.08108 Canadian.

³ As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders at Dec. 31, 1965.

⁴ Includes contingent liability in respect of alternate payments to non-participating provinces. An amendment to the Canada Student Loans Act enacted July 11, 1966 authorizes increased allocations for this loan year by \$27,605,000.

Table 13 summarizes the national debt position during the period 1958-67 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the *Public Accounts of Canada*. They are summarized by standard classification in DBS publication *Federal Government Finance, Revenue and Expenditure* (Catalogue No. 68-211).

13.—Summary of the Public Debt and Interest Payments Thereon, Years Ended Mar. 31, 1958-67

NOTE.—Comparable figures from 1867 are given in the corresponding table of previous Year Books beginning with the 1942 edition.

² Based on the official estimates of population for June 1 of the year immediately preceding the one indicated.

Subsection 3.—Revenue from Taxation

The incidence of Federal Government taxation is dealt with in Section 2. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, estate tax, excise duties and excise taxes; customs receipts constitute a single item in the *Public Accounts of Canada* and are not included here.

Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include employer remittances of tax deductions and Canada Pension Plan contributions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and as a single cheque from one employer may frequently cover the tax payment of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 14 pertain to revenue collections by the Department of National Revenue, Taxation. The collections are for fiscal years ended Mar. 31.

14.—Revenue Collected by the Department of National Revenue, Taxation, Years Ended Mar. 31, 1958-67

NOTE.—Comparable figures from 1917 are given in the corresponding table of previous Year Books beginning with the 1947 edition.

income tax collected by the Department of National Revenue, Taxation.

⁴ Includes Canada Pension Plan

contributions by employers, employees and self-employed collected by the Department of National Revenue, Taxation.

Income Tax Statistics.—Individual income tax statistics are presented in Tables 15 to 17 on a calendar-year basis and are compiled from a sample of all returns received. Taxpayers and amounts of income and tax are shown for selected cities and by occupation and income classes. Tables 18 to 20 give statistics of corporation income tax by industry group, province, income class and size of assets.

Succession Duties and Estate Taxes

From Jan. 1, 1947 to Mar. 31, 1963, only Ontario and Quebec levied succession duties, the other provinces having leased this field to the Federal Government under the terms of the federal-provincial tax agreements (see p. 1010). However, British Columbia re-entered the field, effective for all deaths occurring on or after Apr. 1, 1963. The incidence of the estate tax is discussed at pp. 1022-1023. Federal revenue from succession duties and estate taxes in the year ended Mar. 31, 1966 amounted to \$108,352,379. In the same year, provincial revenues from succession duties in Quebec, Ontario and British Columbia were \$35,927,000, \$56,968,000 and \$14,992,000, respectively.

Excise Taxes

Excise taxes collected by the Excise Division of the Department of National Revenue are given for the years ended Mar. 31, 1965-67 in Table 20.

Excise Duties

Gross excise duties collected are given in the following statement for the years ended Mar. 31, 1965 and 1966. The totals do not agree with net excise duties as shown in Table 9 because refunds and drawbacks are included. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

Section 4.—Federal-Provincial Conditional Grants and Shared-Cost Programs*

During the past decade there has been a rapid increase in federal expenditures on joint federal-provincial programs. These programs take three forms: (1) the Federal Government contributes financial assistance to a program administered by a province; (2) the federal and provincial governments each assume the sole responsibility for the construction, administration and financing of separate aspects of a joint project; or (3) the province contributes financially to a joint program administered by the Federal Government.

The first category of joint programs is by far the most common and such programs are commonly called conditional grant programs. They are characterized by the Federal Government agreeing to make money available to a province on certain conditions, such conditions always specifying the field, service or project to which the money must be applied. In addition, the province may be required to make a financial contribution to the program, to provide certain facilities, and to maintain the program at certain specified standards. The various programs in the welfare field are good examples of conditional grant programs. Under the old age assistance program, the Federal Government undertakes to share with a province the cost of assistance to persons who have attained the age of 65 years to the extent of 50 p.c. of a monthly assistance allowance of \$75; the recipient, besides being above a certain age, must have been a resident of Canada for 10 years and his income, including the assistance, must not be in excess of \$1,260 a year if unmarried, \$2,220 if married, and \$2,580 if married to a blind spouse. The provinces are entrusted with the administration of the program and are required to bear the administrative costs as well as one half of the monthly allowance.

Although the old age assistance program, with its specification of the standards for eligibility, the level of the allowance and the federal share of the joint costs, is characteristic of conditional grant programs, there are some in which the conditions are nominal. For

* As at March 1967. Prepared in the Federal-Provincial Relations Division, Department of Finance, Ottawa.

Appendix to House of Commons Debates of Sept. 10, 1964. Statutes of Canada 1964-65, c. 54.

example, under the Canada Assistance Plan the Federal Government undertook to share one half of the cost of welfare paid to recipients in need, the scale and conditions of the assistance to be determined by the provinces. In general, it may be said that the old age assistance program conformed to the traditional pattern of conditional grants, whereas the Canada Assistance Plan marks an approach in which flexibility and adaptability to local circumstances is allowed to modify insistence on a national uniform standard.

The federal transfers to the provinces in respect of the conditional grant programs increased from \$75,000,000 in the year ended Mar. 31, 1954, to an estimated \$1,348,795 in 1966-67. The increase was attributable largely to the introduction of the hospital insurance and diagnostic services program in 1958, to the increase in the level of old age assistance, disabled persons' and blind persons' allowances, and to the enlargement and reorientation of unemployment assistance and the Canada Assistance Plan (see pp. 332-333). In 1966-67, federal contributions to the programs in respect of hospital and diagnostic services and unemployment assistance and the Canada Assistance Plan were estimated at \$569,893,000 and \$180,218,000, respectively.

Joint programs in the second category—those in which the federal and provincial governments accept sole responsibility for portions of a total project—are not numerous and are generally of a public works type. The irrigation projects carried out jointly by the Prairie Farm Rehabilitation Administration and the Province of Alberta on the St. Mary's and Bow Rivers in southern Alberta are of this nature, as is the bridge being built between Ontario and Quebec at Portage du Fort. In the St. Mary's irrigation project, the Federal Government has undertaken the responsibility for the construction of all main reservoirs, large dams and connecting works, and Alberta has assumed responsibility for the construction of the distribution system and the development and colonization of the new irrigable areas.

Joint programs in the third category are also few in number and the sums of money involved are seldom large. The South Saskatchewan River Dam is an example; Canada undertook to pay the costs of the Dam in the first instance, with Saskatchewan subsequently reimbursing Canada for one quarter of the federal expenditures (up to a maximum of \$25,000,000) on the dam and reservoir. In the year ended Mar. 31, 1967, the costs recovered from Saskatchewan on account of such expenditures amounted to \$4,797,354.

The increasing number and extent of conditional grant and shared-cost programs has occasioned some provincial criticisms and misgivings. It has been argued that the preponderant occupancy of the direct tax field in the postwar years by the Federal Government encouraged the growth of such programs as the provinces were denied the revenues that would have enabled them to provide equivalent programs themselves. At the 1964 Federal-Provincial Conference, the Province of Quebec proposed that a province be given the option to assume full administrative and financial responsibility for certain joint programs upon the Federal Government making available to that province the necessary additional tax room. The "contracting-out" proposal was referred to a federal-provincial committee of officials for consideration. As a consequence of their consideration, the Prime Minister of Canada, in a letter to the provincial Premiers dated Aug. 15, 1964, proposed a temporary measure permitting a province to contract out of certain programs for an interim period pending the development of more permanent arrangements. Parliament approved the necessary legislation—the Established Programs (Interim Arrangements) Act—in April 1965. Under the Act, the Government of Canada was authorized to enter into agreements with any province that wished to contract out of certain conditional grant programs. The nature and number of programs were itemized in the schedules to the Act.

Schedule I listed the major conditional grant programs of a continuing nature which a province might contract out of, and Schedule II listed smaller and more transient programs.

The Schedule I programs were: (1) hospital insurance; (2) old age assistance, blind persons' allowances, disabled persons' allowances, and the welfare portion of unemployment assistance; (3) the technical and vocational training programs for youths who were not yet members of the labour force; and (4) the health grant program, except those elements that involved research and demonstration. The Schedule II programs were: (1) agricultural lime assistance; (2) the forestry programs; (3) hospital construction grants; (4) campgrounds and picnic areas; and (5) the roads to resources program.

If a province wished to contract out of a Schedule I program, it had to enter into a supplemental agreement in which it undertook to assume full responsibility for the administration and financing of the program. The Federal Government undertook to ensure that the province received revenue equivalent to the fiscal burden it assumed. The Federal Government undertook to (a) abate by a specified percentage the federal individual income tax on the income of residents of the province; (b) pay an associated equalization; and (c) make an operating cost adjustment. The operating cost adjustment payment or recovery was to ensure that a province did not suffer or benefit financially through assuming the financing of the federal share of the former joint program. Because of their smaller size and lack of continuity, the compensation associated with contracting out of a Schedule II program did not provide for federal tax abatement or associated equalization payments. The compensation for these programs was to be paid directly to the province by the federal Minister of Finance.

The freedom of a province to vary the nature and condition of a program which it has contracted out of differed between the Schedule I and Schedule II programs. Under the Act, a supplemental agreement with respect to a Schedule I program could vary the conditions of the original agreement only as to the manner in which Canada would contribute to the program and the manner in which accounts were submitted. A supplemental agreement for a Schedule II program might require the program to be continued as in the original authority or it might allow a province to substitute a provincial program having substantially similar objectives.

The Established Programs (Interim Arrangements) Act was designed to provide for an interim period during which a province might assume greater administrative and financial responsibility for the enumerated programs and during which time more permanent arrangements governing joint programs might be devised. The length of the interim period was set out in the Act for each program and varied from Mar. 31, 1967 to Dec. 31, 1970. The tax abatement associated with Schedule I programs was also set out in the Act and varied from 1 p.c. for the health grant program to 14 p.c. for hospital insurance.

The Province of Quebec alone availed itself of the above legislation and entered into agreements contracting out of all Schedule I programs and one Schedule II program, the forestry program. At the federal-provincial meetings in September and October 1966, the Federal Government proposed a slightly revised contracting-out arrangement to the provinces who had not taken advantage of the Established Programs (Interim Arrangements) Act. The Federal Government proposed to abate, for the period 1967-70, 17 p.c. of the personal income tax in those provinces that would take over the financial responsibility for the hospital insurance, welfare (i.e., Canada Assistance Plan) and health grant programs. To ensure fiscal equity, equalization and operating cost adjustment payments were to be associated with the abatement. As the technical and vocational program was being discontinued in its existing form, the offer did not apply to that program. None of the nine provinces to whom the offer applied accepted the offer. In consequence, the legislation governing the contracting-out arrangements with Quebec was amended to include the Canada Assistance Plan and to extend the interim period to Mar. 31, 1970 for the welfare programs and health grant program.

- ¹ Provinces excepted are shown in parentheses.
² As here used, 50 p.c. may mean the province must contribute 50 p.c. of the cost of the project or must match the federal contribution.
³ F = a maximum limit set to the federal share; P = a maximum limit to the provincial share; and O = federal and provincial shares are open-ended.
⁴ Source: *Public Accounts of Canada, 1966-67*.
⁵ Not uniform.
⁶ Provinces to provide administration, services, facilities, land, loans or to undertake a specific portion of the project, etc.
⁷ Represents the provincial and/or municipal share.
⁸ Provinces to maintain existing level of expenditures or to bear residuary costs.
⁹ Share for provision of services only.
¹⁰ Disbursement made by Central Mortgage and Housing Corporation as Federal Government agent.

Section 5.—Provincial Government Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the *Public Accounts* figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section. The fiscal years of all provinces end on Mar. 31.

Revenue and Expenditure.—Table 22 shows net general revenue and expenditure of provincial governments for the years ended Mar. 31, 1961-65 and Tables 23 and 24 give details of such revenue and expenditure for the fiscal year ended Mar. 31, 1965. "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; and grants-in-aid and shared-cost contributions from other governments. Table 25 gives details of the amounts paid to other governments by provincial governments, according to nature of payment.

¹ N.S.—Share of Crown land leases; Ont.—share of liquor licences; Alta.—share of liquor fines.

² Includes compensation of \$83,204,000 payable to municipalities in lieu of the right to impose a sales tax.

³ Includes payments of \$25,205,000 under the Municipal Unconditional Grants Act.

⁴ Does not include grants in lieu of taxes paid by provincial government enterprises.

⁵ Includes grants paid directly to teachers in P.E.I., N.B. and Que.

⁶ Local schools are operated by the territorial government and by religious denominations.

⁷ Primary and secondary schools are operated on a denominational basis.

⁸ Local schools are operated by the Federal Government, religious denominations and school districts; the amount shown was paid to school districts.

⁹ Local schools are operated by the Federal Government, religious denominations and school districts; the amount shown was paid to school districts.

¹⁰ Includes grants of \$6,569,000 to conservation authorities.

¹¹ Includes \$3,348,000 interest assumed on loans by the City of Montreal and the Montreal Metropolitan Corporation.

¹² Consists of: Que.—Department of Mines and Technical Surveys \$1,600,000; Ont.—amalgamated and amalgamated \$1,960,000; Department of Northern

Debt of Provincial Governments.—Table 26 shows total bonded debt, by province, as at Mar. 31, 1964-66. Table 27 shows that the majority of bond issues are payable in Canada. Table 28 provides details of total direct and indirect debt of provincial governments as at Mar. 31, 1966.

¹ Includes bonds issued by the Ontario Junior Farmer Establishment Loan Corporation \$11,000,000 and by the Ontario Municipal Improvement Corporation \$28,000,000.
² Excludes bonds due \$2,000.
³ Includes debts assumed by the province as follows: Metropolitan Boulevard \$61,200,088, loans of the Quebec Municipal Commission for the settlement of school debts in 1947 \$13,988,900, loans contracted by certain Universitarian Institutions \$42,673,645, loans of the Village of Parent \$521,000.
⁴ Includes net liability of the province re Ontario Savings Office \$78,502,000 at Mar. 31, 1966.
⁵ Excludes debt of toll road authority.
⁶ Amount authorized; information re amounts outstanding not available.
⁷ In addition, the province has guaranteed the interest on school district debentures having a par value of \$4,055,000; on sewage disposal and water supply systems debentures having a par value of \$2,504,000, and on principal of mortgage loans under the Elderly Persons Housing Act of \$1,221,000. An undertaking was also given to service a mortgage loan obtained by Brandon College Incorporated from Central Mortgage and Housing Corporation, the balance of principal being \$1,469,000.
⁸ Excludes guaranteed interest under the School Borrowing Assistance Act and the School Buildings Assistance Act on principal borrowings of \$9,863,000.

Section 6.—Municipal Government Finance

Municipal Taxation.—Table 29 shows, for the year 1964, local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, these figures should not be used as a basis for interprovincial comparisons of the relative burden of municipal taxation.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

In this Chapter various statistical statements and studies are presented in which broad areas of Canadian economic activity are covered in a comprehensive but summary form. These integrated aggregative economic accounts provide an interrelated framework for economic analysis and the observation of changes in the functioning of the Canadian economy and its structure and in economic and financial relationships with other countries.

Section 1.—National Accounts

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to business men concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 4 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. In the other tables in which the data are expressed in current dollars, year-to-year changes must be considered in relation to price changes over the period.

* Sections 1 and 2 were prepared in the National Accounts, Production and Productivity Division, and Sections 3, 4 and 5 in the Balance of Payments and Financial Flows Division of the Dominion Bureau of Statistics. Section 6 was prepared by the authorities concerned.

The tables on pp. 1064-1069 cover the more important aspects of the national income analysis in annual terms. Definitions are as follows:—

National Income.—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

Gross National Product.—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1966

The Canadian economy in 1966 registered still another strong advance as continued high levels of demand in the domestic sector together with buoyant conditions abroad pushed the gross national product (GNP) to a level of \$57,700,000,000, a figure 10.8 p.c. above that for 1965. With the economy operating at high levels of employment, the resulting pressures on prices and costs were evident in a 4.6 p.c. advance in prices which reduced the 10.8-p.c. GNP gain to one of 5.9 p.c. in real terms. This compared with an increase of 9.9 p.c. in GNP in 1965 which was reduced to a volume gain of 6.8 p.c. after accounting for price advances of 2.9 p.c. Much of the 1966 gain occurred in the first quarter of the year when GNP increased $4\frac{1}{2}$ p.c. (partly reflecting the estimated value of the 1966 record grain crop of \$1,564,000,000 which was \$263,000,000 higher than the value of the 1965 crop), the strongest quarterly advance in the current expansion. Although increases in demand in that quarter were broadly based, certain special factors contributed both to a marked rise in exports and to a fractional gain in imports, thus substantially reducing the import balance. The quarter-to-quarter gains in GNP for the remainder of the year were more moderate—about 2 p.c. in the second quarter, less than 1 p.c. in the third quarter when strikes were a major factor, and 2 p.c. in the fourth quarter.

For 1966 as a whole, there were gains in a wide range of final expenditure categories. For the third successive year, business spending on plant and equipment was a dominant factor, investment in these categories increasing by nearly 18 p.c. compared with an advance of 20 p.c. in each of the two preceding years. At the provincial and municipal levels, government capital spending reinforced demands by the business sector so that total public and private outlays on plant and equipment rose by more than 18 p.c. For the second successive year, outlays on new housing showed only fractional gains. A sharp decline in mortgage loan approvals by conventional lenders contributed to the marked drop in the number of apartment units started; single family units started showed a slight decrease. Investment in business inventories was maintained at a rate only slightly lower than that of 1965.

Government expenditures on goods and services, including capital goods, increased more than 16 p.c. over 1935. Increased outlays on salaries and wages were an important part of the over-all change. In this area, retroactive wage payments together with increased salary rates to the Armed Forces and to the public service at the various levels of government, some of which involved adjustments over a period of years, accounted for most of the rise. Entirely as a result of Canada and Quebec pension plan contributions, the surplus, on a national accounts basis, for all levels of government combined increased somewhat in 1966. Exclusive of these contributions, the federal surplus narrowed by about \$440,000,000 and the provincial-municipal deficit widened by about \$240,000,000.

Consumer spending was about 9 p.c. higher in 1966; with personal disposable income increasing by $9\frac{1}{2}$ p.c., personal net savings rose. Prices of consumer goods increased by $3\frac{1}{2}$ p.c. as compared with a rise of 2 p.c. in 1965. Durable goods spending as a whole rose by 4 p.c. but there was no increase over 1965 in spending on automobiles in contrast to marked increases in each of the four preceding years. Outlays on non-durable goods and services increased by $9\frac{1}{2}$ p.c. and 9 p.c., respectively.

Demand for Canadian goods on world markets increased by 16 p.c. over 1965, in contrast to a growth of $6\frac{1}{2}$ p.c. in 1965 over 1964. Exports of wheat to countries such as the Soviet Union and Mainland China, together with a large gain in exports of automobile products mainly to the United States, accounted for about one half of a \$1,600,000,000. gain in merchandise exports. Imports rose 15 p.c. The Jan. 1, 1965 Canada-United States Automotive Agreement resulted in a swelling in imports of automotive products but the historically unfavourable trade balance on these products narrowed in 1966 by over \$100,000,000. Investment outlays caused a further significant increase in imports of machinery and equipment. Although the surplus on merchandise transactions increased by about \$100,000,000, this improvement was offset by a larger deficit on non-merchandise current transactions, resulting in a widening of the current account deficit by \$72,000,000, on a national accounts basis.

On the income side, the salient features of 1966 were an increase in labour income of nearly 13 p.c. that was one of the largest year-to-year gains since 1951, a 34-p.c. rise in farm income resulting from a record western grain crop, and a fractional decline in corporation profits following increases in this component over the past five successive years.

On the labour supply side, a sizable increase in immigration and increasing participation rates coupled with a decline in agricultural employment, caused the non-agricultural labour force to increase by 5 p.c. Non-agricultural employment rose by $5\frac{1}{2}$ p.c. and the unemployment rate for Canada was 3.6 p.c. compared with 3.9 p.c. in 1965. Work stoppages resulting from industrial disputes caused a loss of close to 5,000,000 man-working days, more than double that of 1965. In response to such factors as the tight employment market and wage demands, wage rates rose sharply and greatly outpaced productivity gains which, in 1966, were much reduced from the $2\frac{1}{2}$ -p.c. and 3-p.c. gains of recent years. The result was a notable rise in unit labour costs.

The aggregate price increase, as measured by the implicit price index of gross national expenditure, was 4.6 p.c. in 1966 compared with 2.9 p.c. in 1965. Prices of personal expenditure, government expenditure and exports all increased at significantly higher rates in 1966 than in the preceding four years. Price increases for imports, although higher than in 1964 and 1965, were lower than in 1962 and 1963 when the effects of devaluation were evident. In business gross fixed capital formation, the rate of increase was slightly lower than in 1964 and 1965, when sales taxes on production machinery and on building materials were increased.

Considering the components of personal expenditure, there was a strong increase in the price of food, most of it accounted for by meats and dairy products. In services, there was more of an increase in the price of rents than had been noted in recent years. Prices associated with household services and education showed increases above 10 p.c. but communication showed little price change. New car prices declined over 1 p.c. but

prices of furniture and jewellery went up about 4 p.c. The increase of 2 p.c. in the Ontario sales tax in the second quarter of the year had a significant effect on the rise in prices of durables and of non-food goods as a whole.

Components of Demand.—Total personal expenditure on goods and services reached \$34,800,000,000 in 1966, an increase of more than $8\frac{1}{2}$ p.c. over 1965. A gain of $9\frac{1}{2}$ p.c. in personal disposable income permitted not only this level of spending but also a sharp increase in the level of personal saving. Although all three major components of consumer expenditure shared in the rise, which was the largest percentage increase since 1952, the gain was somewhat unevenly distributed and of a different pattern than that of the two preceding years. Non-durables showed a $9\frac{1}{2}$ -p.c. gain compared with increases of $6\frac{1}{2}$ p.c. and $7\frac{1}{2}$ p.c. in 1964 and 1965, respectively. (In real terms, the increases were around 5 p.c. for each of the three years.) Durables showed a 4-p.c. rise in 1966, the lowest since 1961 and considerably below the increases of $10\frac{1}{2}$ p.c. and $11\frac{1}{2}$ p.c. in 1964 and 1965. The 9-p.c. increase in expenditure on services matched the gain of 1964 and was about 1 p.c. above that of 1965.

The large increase in outlays on non-durable goods was broadly based, although much of it represented price rises rather than gains in real terms. For example, food outlays were up by about $7\frac{1}{2}$ p.c. in value terms but only by 1 p.c. in real terms; clothing by 6 p.c. (value) and 2 p.c. (real); and tobacco by 6 p.c. (value) and $2\frac{1}{2}$ p.c. (real). Increases in outlays on alcoholic beverages and drugs and cosmetics, however, represented significant gains in both real and value terms. The relatively small increase in outlays on durable goods was attributable mainly to an unchanged level of purchases of new and used cars from the previous year, after increases of 12 p.c. to $14\frac{1}{2}$ p.c. in the three preceding years. The over-all rise in durables was attributable to increases of 8 p.c. in toys and sporting goods, 7 p.c. in furniture, $9\frac{1}{2}$ p.c. in home furnishings and 11 p.c. in radios and appliances. The 9-p.c. gain in services was also broadly based. Shelter, accounting for about 40 p.c. of the total, rose by $8\frac{1}{2}$ p.c. and each of total transportation services and medical expenditures by 8 p.c.

Capital expenditures in 1966 amounted to \$12,200,000,000, 14.7 p.c. higher than in the previous year. Non-residential construction and machinery and equipment outlays rose 19.6 p.c. and 16.0 p.c., respectively, but outlays on new housing advanced only 2.5 p.c. Investment in plant and equipment moved from a seasonally adjusted annual rate of \$9,900,000,000 in the first half of 1966 to \$10,200,000,000 in the second half. Capital expenditures for all major industrial divisions, apart from forestry and construction, were higher in 1966 than in 1965. In manufacturing, advances were recorded by pulp, primary metals, electrical products, non-metallic minerals, petroleum and coal products, transportation equipment, rubber, and food and beverage industries, and declines by the wood, textile, printing and publishing, and chemicals industries. Mining, electric power, gas and water utilities, and transportation industries made pronounced gains. Housing outlays were a significantly lower percentage and mining machinery a significantly higher percentage of business capital spending in 1966. Housing expenditures at \$2,200,000,000 were little changed from 1965; they rose 5.8 p.c. in the first half of 1966 over the latter half of 1965 but fell 9.1 p.c. between the first and second halves of 1966. Housing starts dropped from 166,600 to 134,500; completions rose from 153,000 to 162,200; and dwellings under construction were 119,900 at the beginning of the year and 88,600 at the end. Single-detached starts dropped only from 75,000 to 71,000 during the year but apartment starts were down from 78,000 to 52,000. Business capital spending plans for 1967, as published in *Private and Public Investment in Canada—Outlook 1967*, were unchanged in over-all level from 1966. Although manufacturers' capital budgets were markedly lower in such branches as pulp, primary metals, non-metallic minerals, metal fabricating and textiles, the construction budget for electric power, gas and water utilities showed a striking increase.

Investment in non-farm business inventories was \$832,000,000 in 1966 compared with \$905,000,000 in 1965. However, there were marked differences in the rates of accumulation in the four quarters of the year; there was virtually no change in the rate in the

first quarter, a substantial gain of close to \$1,400,000,000 in the second quarter partly as a result of a build-up of automobile stocks associated with a sharp drop in new car sales, a decline to \$600,000,000 in the third quarter partly as a result of strike effects and partly because of a drawing down of new car inventories, and an only fractional increase in the fourth quarter. For the year as a whole, investment in inventories at the manufacturing level accounted for about 60 p.c. of the total accumulation. The major part took place in the durable goods producing industries, about 40 p.c. of which was concentrated in transportation industries. In the non-durable goods producing industries the movement was mixed, leaving on balance a relatively small accumulation. Compared with 1965, the 1966 rate of increase was higher in non-durable goods industries and was concentrated mainly in the food and the rubber industries; among durables, although the rate of increase in transportation industries was significant, that in the primary metal, metal fabricating and machinery industries dropped substantially. For manufacturing as a whole, the average stock-to-shipments ratio for 1966 was higher than the average for 1965.

Moderate increases were recorded in the stocks of wholesale and retail traders in 1966. About 70 p.c. of the increase in the stocks of wholesale traders resulted from a general increase in the stocks of durable goods. Compared with 1965, the increases in the stocks of wholesalers were lower in durables and higher in non-durables. The average stock-to-sales ratio for the year was above the average of the current expansion. A considerable amount of accumulation was concentrated in the holdings of retail traders in 1966. There was a significant increase in the stocks of all non-durable goods, particularly of food, and there were modest increases in the stocks of durable goods. Compared with 1965, the durables were built up at a much reduced rate, tempered by a drawing down of stocks of motor vehicle dealers in the third quarter of 1966; the rate of accumulation in non-durables was virtually unchanged. The average stock-to-sales ratio for the year was above the average of the current expansion.

During 1966, the deficit in Canada's external account increased by \$72,000,000 on a national accounts basis. This resulted from a rise of \$106,000,000 in the surplus on merchandise trade—as increased export sales outpaced the climb in import demand—offset by a deterioration of \$178,000,000 in non-merchandise trade. Much of the latter may be ascribed to higher deficits in the interest and dividend account and to miscellaneous services (business services, government expenditures, etc.) account, and also to larger official contributions. Merchandise exports increased by \$1,581,000,000. Important export gains were made by food, feed, beverages and tobacco (mainly wheat), crude metals and non-metallic minerals, pulp and paper, fabricated metals, machinery and, notably, transportation equipment. Imports rose \$1,475,000,000, the increase being highlighted by imports of machinery required for investment purposes, other equipment and tools such as measuring and laboratory equipment, computers, other office machinery and equipment, and, notably, transportation equipment. Decreases in the trade surplus with Britain, other sterling area countries and other OECD countries in Europe were more than offset by a smaller trade deficit with the United States and by a substantial improvement in the surplus with other countries, resulting in a \$106,000,000 increase in the merchandise trade surplus between 1965 and 1966.

The Government Sector.—Total revenues of all levels of government combined (excluding inter-government transfers) reached \$18,800,000,000 in 1966, an increase of \$2,400,000,000 or almost 15 p.c. over 1965. Approximately 30 p.c. of this increase came from receipts resulting from the inception of the Canada and Quebec pension plans in January 1966. Federal receipts exclusive of the pension plan increased 8 p.c. compared with a 9½-p.c. increase in 1965, and provincial-municipal receipts increased over 13 p.c. in both years. Expenditures by the various levels of government were up more sharply than non-pension plan receipts—14 p.c. at the federal level compared with 6½ p.c. in 1965, and 15½ p.c. at the provincial-municipal level compared with 13 p.c. in 1965. The effect of these various flows was to increase the surplus for all levels of government combined by a marginal \$34,000,000; this increase was entirely attributable to the receipts from the

pension plans because, excluding these, the federal surplus was reduced by \$444,000,000 to one of \$124,000,000, and the combined provincial-municipal deficit was increased by \$236,000,000 to reach a total of \$558,000,000 for 1966.

Aside from the surge in receipts from the pension plans, all components of government revenues, with the exception of revenues from the corporate income tax, increased sharply in 1966, mainly as a result of generally buoyant economic conditions. In addition, higher general retail sales tax rates in Ontario and extended tax bases in Ontario and Quebec reinforced revenue gains from indirect taxes. Indirect taxes for all levels of government increased by some 10½ p.c. Revenue from direct taxes rose by \$548,000,000, almost all contributed by personal taxes. The share of the increase going to provincial governments was somewhat greater than that accruing to the Federal Government because of a further abatement to the provinces of three percentage points of basic income tax on Jan. 1, 1966. Expenditures on goods and services for all levels of government combined rose by a striking 16½ p.c. in 1966—19 p.c. at the federal level and 15 p.c. at the provincial-municipal level. At the federal level, 75 p.c. of the increase occurred in outlays on non-defence goods and services; defence expenditures rose by 10 p.c.

Components of Income.—Labour income in Canada was about 12½ p.c. higher in 1966 than in 1965, despite the occurrence of severe industrial disputes. About half of the increase was attributable to additional employment in the non-agricultural industries and the other half to increased average earnings, mostly from higher wages but in some cases from longer average weekly hours, particularly in construction, and more overtime. The increase in the number of employees came mainly from young persons leaving school and immigrants but also from a larger percentage of women participating in the labour force. Participation rates for men were virtually unchanged. Unemployment rates, on average, were slightly lower in 1966 than in 1965. The goods-producing industries accounted for more of the increase in payrolls than did the service industries—13 p.c. compared with 11 p.c.—although this trend was reversing toward the end of the year. The primary industries recorded a 7½-p.c. increase in labour income, somewhat less than the average; the largest increase involved mining where most of the rise was in average earnings, due to both higher wage rates and some shift toward the more highly paid sectors, such as iron and petroleum.

Manufacturing, up by 11½ p.c., continued the steady increase noted in 1965, absorbing almost its share of additional employment. The construction industry recorded increased salaries and wages of almost 25 p.c., resulting partly from a lessening of the seasonal decline associated with that industry and partly from greater emphasis on engineering projects where hourly earnings are significantly higher. The average weekly hours worked in the construction industry also increased. Over the year, this industry appears to have attracted more than the national average increase in numbers of employees. Average weekly earnings in construction increased by an even higher proportion. Service-producing industries, responsible for about 58 p.c. of wage and salary payments in Canada, had income increases almost as high as the goods-producing industries but with somewhat higher employment gains and less in average weekly earnings. The greatest gains were in the trade and service sections—11 p.c. and 14 p.c., respectively—which may have attracted more part-time employees. Proportionately lower payroll increases were evident in transportation and other public utilities—8 p.c.; these industries, being generally less cyclically sensitive, experienced about average increases in earnings. Finance, insurance and real estate increased 8½ p.c. Government payrolls increased by more than the average in 1966. Retroactive payments made in 1966 but pertaining to 1965 were partly responsible for the large increase of 15 p.c. in federal non-military payments but provincial governments also recorded a large increase of 13 p.c. In part, the rise in government payrolls was due to relatively low increases in earlier years. Supplementary labour income showed a substantial increase in 1966 of 23½ p.c., mainly a result of the Canada and Quebec pension plans.

Corporation profits (before taxes and before dividends paid to non-residents) were \$5,200,000,000 in 1966, little changed from 1965. A quarter-to-quarter comparison through 1965 and 1966 indicates a rising level of profits in the second and third quarters of 1965 with little change in the first two quarters of 1966; following a decline in the third quarter, profits in the fourth quarter almost regained levels attained in the latter part of 1965. Profits in the manufacturing group fell by about 2 p.c.; the petroleum and coal industry showed a gain of 25 p.c. and the rubber, wood, printing, electrical apparatus, chemical, and miscellaneous categories recorded relatively smaller gains, but the textile and paper industries declined 24 p.c. and 23 p.c., respectively, and the metal and non-metallic mineral industries both declined about 7½ p.c. Wholesale trade profits advanced nearly 11 p.c., service trade profits nearly 16 p.c., and transportation, storage and communication 9 p.c., but retail trade profits declined 5 p.c., mining 5 p.c., and finance, insurance and real estate nearly 3 p.c.

Rent, interest and miscellaneous investment income rose 10 p.c. over 1965 compared with an increase of 9 p.c. in 1965 over 1964. Government investment income for all levels combined rose by \$172,000,000 in 1966—\$45,000,000 at the federal level and \$127,000,000 at the provincial-municipal level. Subsidies to the railways in 1966 were higher than in 1965.

Accrued net income of farm operators was \$2,204,000,000 in 1966, 34 p.c. higher than in 1965. All components showed increases, the largest occurring in grain production; the value of the record 1966 grain crop at \$1,564,000,000 was 20 p.c. above the 1965 level and 13 p.c. above the previous record of \$1,381,000,000 in 1963. Cash income from the sale of livestock increased by about 15 p.c. and the increase in income from other farm products was mainly accounted for by dairy products, partly reflecting much higher federal and provincial dairy subsidies, and by rapeseed and soybean crops. Because the increase in expenses was less than the increase in cash income, net income advanced by more than cash income. During 1966, net income of non-farm unincorporated business increased to \$2,949,000,000, a figure 2½ p.c. higher than the 1965 total. The service industries showed small increases but these were partially offset by declines in manufacturing and retail trade.

Economic Activity in the First Nine Months of 1967

In the first nine months of 1967, gross national product advanced 6½ p.c. over the same period of the previous year, a considerably lower rate of increase than the nearly 11-p.c. gain for the full year 1966. Because prices rose by 4½ p.c., the same rate of advance as for 1966, the gain in real terms was 2 p.c., reduced sharply from the 6 p.c. of the previous year.

Among categories of demand, only personal expenditure matched its 1966 rate of increase; all others showed substantially reduced rates of advance. The rate of increase in government expenditure at both the federal and provincial-municipal levels was about one third lower than that of 1966; the over-all increase was 10½ p.c. as against 16½ p.c. Exports and imports also increased at lower rates, 13 p.c. and 9 p.c., respectively, substantially narrowing the current account deficit. Business gross fixed capital formation showed the most pronounced change, advancing only fractionally after a 14½-p.c. increase in 1966; among its components, residential construction rose at a slightly higher rate but non-residential construction slumped from an advance of 19½ p.c. to a decline of 3 p.c., and machinery and equipment from a 16-p.c. increase to an increase of 1½ p.c.

Labour income increased 10 p.c. as compared with the exceptionally high advance of 12½ p.c. in 1966. Gross corporation profits increased 1 p.c. compared with a 3-p.c. rise in 1966. Rent and interest income and net income of non-farm unincorporated business rose at higher rates than in 1966.

Significantly affecting several components of both income and demand were Expo 67 and other centennial events. Perhaps the most dramatic influence was in the tourist and travel account, which shifted from a small deficit in the first nine months of 1966 to a surplus of about \$400,000,000 in the same period of 1967.

Section 2.—Industry Production Trends

Indexes of Real Domestic Product

The Dominion Bureau of Statistics in 1963 made available a new set of production data pertaining to the entire spectrum of Canadian industries. These data, in the form of volume of production indexes, are measures of value added for each industry expressed in the dollars of a base year. Technically, they are termed "indexes of real domestic product (GDP) at factor cost originating by industry".* The value added, or GDP, volume indexes can be regarded as an extension of the index of industrial production† to encompass the remainder of the economy. Concepts and basic methods used to construct both indexes are the same. Thus, industry production index coverage is extended from mining, manufacturing and electric power and gas utilities, for which volume indexes have been published since the 1920s, to include all other major industrial divisions. However, only the index of industrial production is published on a monthly basis; for the remaining industries only quarterly and annual indexes are currently being published. The GDP indexes can also be regarded as an elaboration of the supply side of the national income accounts.*

In measuring the output of a single product such as steel, it is normal to think in terms of tons of steel when the question of quantity arises. When measuring the combined production of steel and natural gas, there is an obvious need for a common denominator and it is appropriate to use the average unit prices of a certain time period (chosen as the base) to value the quantities produced before adding them together. The resultant quantity, volume or real output measure can be subsequently left in its constant or base period dollar form or it can be expressed in index number form. The latter is accomplished by dividing the constant dollar aggregate of the current period by the dollar aggregate for the base period and multiplying by 100. In constructing a quantity index for a combination of industries where the output of one industry becomes the input of another, the portion double-counted must be eliminated. This is accomplished by revaluing both intermediate input (materials, fuel, etc.) and total output in terms of the dollars of a common base year and subtracting the constant dollar value of the former from the latter to yield a constant dollar value added aggregate.* This aggregate is the quantity of volume measure represented by the indexes presented herein.

The annual indexes are well suited for studies of production trends, growth rates and inter-industry comparisons, but the quarterly indexes provide a much better tool for the

* *Indexes of Real Domestic Product by Industry of Origin, 1935-61* (Catalogue No. 61-505). This paper provides a detailed explanation of concepts, uses and limitations, data sources, methodology, etc., and covers a much wider range of industries than provided in this Section. Current quarterly data are published in DBS monthly *Index of Industrial Production* (Catalogue No. 61-005).

† See *Revised Index of Industrial Production, 1935-57* (Catalogue No. 61-502) and the current monthly publication *Index of Industrial Production* (Catalogue No. 61-005), together with its 1966 Annual Supplement which contains historical revisions to the index of industrial production and its components for the 1949-65 period.

study of the cyclical behaviour of industries, short-term changes in production and, in fact, for most types of current analysis. Statistics computed for less than annual intervals, however, are frequently subject to strong seasonal influences, and variations in the number of working days during a quarter may cause differences in the levels of output between two quarters which otherwise would not exist. Accordingly, the quarterly real output indexes have been adjusted for both seasonal and calendar variation. The effects of the seasonal adjustment are shown on the quarterly chart for the period 1949-66.

REAL DOMESTIC PRODUCT AT FACTOR COST
BY QUARTERS, 1949-66
(QUANTITY INDEXES, 1949=100)

Factors Underlying Industrial Output Trends, 1946-66.—The early postwar period was marked by several major expansions. The first was based on satisfying the backlog of war-deferred investment and consumer demand and on supplying the needs of the war-devastated countries, especially for various materials. This was followed by some slowing down in production but the requirements of defence-supporting industries after the outbreak of the Korean hostilities and stockpiling requirements at home and abroad introduced a second expansionary period. The third was the investment boom of the mid-1950s during which output reached a new high level. These strong demand influences combined to make most of this period one of fairly rapid and sustained growth. During the late 1950s the rate of increase diminished, as external sources of supply for many commodities multiplied and as competition intensified. At the same time, there was an absence of strong stimulants to domestic demand, such as the deferred demand and the population growth of the preceding period. During the 1960s, however, the first waves of the postwar generation exercised a growing influence on the demand for goods and services and this proved to be one of the major stimuli to the current expansion which began early in 1961 and continued into 1966. Other notable features of the expansion were: the relatively slow growth of imports compared with previous expansion periods, particularly after the stabilization of the Canadian dollar and other government measures undertaken in mid-1962 (although some acceleration took place in imports of machinery and equipment during 1964 and 1965 in response to the increased investment in construction and plant and equipment); the increase in exports, particularly during the latter part of 1963 and early 1964 when large amounts of wheat were sold abroad; the above-average output of the mining and agriculture industries since 1962; and the substantial gains in the production of the iron and steel and motor vehicle and parts industries throughout most of the period.

Along with the increases in total final demand, there were shifts in the composition of demand, which affected the output of the various industries. Imports retained roughly

the same relative share of the gross national product but the share of exports declined from 27.1 p.c. in 1946 to 22.3 p.c. in 1966, an indication of the growing importance of the domestic market as an outlet for the products of Canadian industry. Government expenditure and business gross fixed capital formation made considerable relative gains but personal expenditure on goods and services as a percentage of total expenditure declined from 67.8 p.c. in 1946 to 60.3 p.c. in 1966.

Even more remarkable than some of the demand-induced changes were the striking changes brought about by the technological discoveries and innovations that transformed whole production processes and opened up previously unknown areas in the fields of manufacturing, transportation and communication. Newer industries, such as air transport, assumed major importance in a comparatively short time; entirely new industries, such as gas pipelines, appeared; and a profusion of new products were created, such as the petrochemicals of the chemicals industry and the television and other electronic products of the telecommunication equipment industry. As was to be expected, the industries in a position to benefit from such innovations were among the most rapidly expanding in the economy, although the impact of the expansion spread through the entire economic system. The changes in production and demand also influenced the level of employment in the various industries; there was a considerable shift in employment during the postwar period from the goods-producing to the service-producing industries and most of the loss in the former took place in agriculture.

Industrial Expansion, 1946-66.—Although all the major industry groups expanded during 1946-66, development was not uniform throughout the period. Three important types of factors affecting the expansionary paths of industries were in evidence at some point during the period. The first may be described as some special factor at work in a particular industry, the effects of which would be most noticeable in that industry—for example, the demand for uranium which had an important influence on the mining industry during the latter half of the 1950s, the opening up of new mineral resources such as the iron ore mines in Quebec-Labrador, and certain technological innovations such as the development of synthetic materials or television. The second type of factor is much more general in its effects and in its causes. Such factors as increased demand for consumer goods resulting from a rising standard of living and a growing population, shifts in world trading patterns or shortages causing increased demand for export goods, the surge of investment activity associated with replacement cycles, as well as attempts to broaden the base of economic activity through investment in research, social overhead capital, education, improved management and marketing techniques, or a more efficient production process (or a confluence of all these factors) appear to lie at the root of such postwar expansions as the investment boom of the mid-1950s or the rapid expansion in production since 1961. The third type of factor would be some unique and far-reaching event, of which the Korean War might serve as a conspicuous example.

All three factors, jointly or in turn, have reacted on the various industries to result in the upswings in aggregate production. The percentage growth of each of the main industrial groups in the 1946-66 period was as follows:—

<u>Industry</u>	<u>p.c.</u>	<u>Industry</u>	<u>p.c.</u>
Agriculture.....	1.7	Trade.....	4.1
Forestry.....	1.8	Finance, insurance and real estate.....	4.9
Fishing and trapping.....	1.8	Public administration and defence.....	3.8
Mining.....	8.9	Community, recreation, business and personal service....	3.7
Manufacturing.....	4.9		
Construction.....	5.1	REAL DOMESTIC PRODUCT.....	4.5
Electric power and gas utilities..	9.6		
Transportation, storage and communication.....	4.8		

Foremost in growth was the electric power and gas utilities industry, followed by the mining and construction industries. All three were strongly affected by technological advances, new discoveries and a fairly well sustained demand for their products. The demand in mining frequently came from abroad, resulting in relatively high export sales and providing incentive for the opening up and developing of new mineral resource areas. Some slackening in construction activity was evident following the unusually high levels reached during the mid-1950s but since 1963 the swing has again been upward, although there was some flattening in the latter part of 1966.

Although most of the other industry divisions (except agriculture, forestry and fishing and trapping) expanded at roughly the same average rate of between about 4 p.c. and 5 p.c., the manufacturing, trade, and transportation, storage and communication industry divisions, which together account for about one half of the total output, also showed strikingly similar cyclical patterns. Within manufacturing it was the durables component that expanded particularly rapidly during the cyclical upturns and that benefited from the need for machinery and equipment in the periods of heavy investment and from increased consumer demand for such products as motor vehicles and electrical appliances during the current expansion. Non-durables maintained a fairly steady rate of expansion for most of the postwar period, largely in response to increased population and demand for industrial materials. A similar pattern was observable in trade, with retail trade exhibiting a relatively smooth expansionary trend.

The community, recreation, business and personal service industry division was relatively insensitive both to cyclical and irregular influences but, along with some other

steadily expanding industries such as finance, insurance and real estate, non-durables and retail trade, it helped to sustain aggregate production and growth during periods of contraction and expansion. Although this division as a whole showed a less-than-average rate of growth, some of its components, such as business services, education and hospitals and restaurants, hotels and motels, were among the most rapidly expanding in the economy.

The rates of growth in the forestry, agriculture, and fishing and trapping divisions were also below average and were subject to pronounced irregular fluctuations in output—forestry because of the nature of its production processes and also, to some extent, because of its sensitivity to changes in world demand and price; agriculture because of marked year-to-year differences in output more often caused by weather conditions and similar factors than by changes in prices and demand conditions; and fisheries because of its dependence on the vagaries of nature.

Production of Commodity-Producing Industries

The data contained in the tables under this heading are published in the DBS report *Survey of Production*.^{*} The scope of the survey of production is limited to industries chiefly engaged in the production of commodities and it measures production in current dollars. This is in contrast to the real domestic product series (p. 1069) which encompasses all industries and measures production in terms of the dollars of a base year.

Tables 13 and 14 give "census value added" production data, classified by province and industry, respectively. Census value added is derived by deducting from the gross value (exclusive of excise and other sales taxes) of shipments (adjusted for change in inventory of finished goods and goods-in-process) or revenue, the cost of materials. The figures include interim classification and valuation changes in mining, manufacturing and forestry brought about by the adoption of the 1960 standard industrial classification of establishments. However, the three industry aggregates continue to consist of census value added accruing from their primary activity only.^{*} Standard industrial classification changes have not yet been implemented for other industries.

^{*} DBS Catalogue No. 61-202. See Appendix II of the 1964-65 issue for census value added in manufacturing and forestry on an all-activities basis.

Section 3.—Aggregate Productivity Trends

Increasing interest in questions of economic growth, cost-structure and international competitiveness, and in the relationships between output, employment, earnings and prices has focused attention on productivity as a framework within which such problems can usefully be discussed. Recognizing this interest, the Dominion Bureau of Statistics now publishes annual indexes of output per person employed and per man-hour in Canada covering the commercial industries as a whole, with separate detail for agriculture and the commercial non-agricultural industries, manufacturing and the residual commercial non-manufacturing industries. Similar indexes are also published for the total and non-agricultural goods-producing industries, and the commercial service-producing industries of the same aggregate.*

* See DBS Reference Paper *Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Non-agricultural Industries, 1947-63* (Catalogue No. 14-501) and *Aggregate Productivity Trends, 1946-66* (Catalogue No. 14-201).

Although these measures relate output to a single input only, namely labour time, they do not measure the exclusive contribution of labour to output. Changes in indexes of output per unit of labour input reflect the combined influence of a number of separate but interrelated factors such as the amount and quality of capital equipment, the extent of utilization of available capacity, managerial efficiency and the impact of technological progress, as well as the skill and effort of the work force.

Sources of Data.—The output components of the various indexes of output per unit of labour input referred to here are the historical indexes of "real domestic product (GDP) at factor cost by industry of origin", described in Section 2, p. 1069. These indexes, which were developed within the conceptual framework of the national accounts and which measure in constant dollar terms the unduplicated contribution of each component industry to total output, are considered basically suitable for productivity measurement when matched with the corresponding input measures.

The major sources for the employment and man-hour indexes were the monthly labour force and employment surveys, and these were supplemented by data from such sources as the annual censuses of manufacturing and mining and the decennial census of population. Since the data from these diverse sources varied considerably in their coverage, concepts and methods of compilation, care had to be exercised in their selection, adaptation and combination into aggregate measures of labour input which would be conceptually and statistically consistent, both internally and in relation to the output data. Labour force survey data were used for the paid worker estimates of agriculture and of fishing and trapping, while those for manufacturing and mining were based on adjusted annual census data. Estimates for most of the remaining industry divisions were derived from adjusted employment survey data. Estimates of other than paid workers (own-account workers, employers and unpaid family workers) were derived mainly from the labour force survey. The estimates of average hours worked, which were needed for the indexes of output per man-hour, were also based on labour force survey data, except in the case of manufacturing, where estimates of man-hours paid from the census of manufactures were adjusted to the man-hours worked concept.

Growth Rates.—Output per person employed in the commercial non-agricultural industries grew at an average annual rate of 2.5 p.c. between 1946 and 1966. Because of the decline in average hours worked per person, this was a lower rate of growth than that of output per man-hour which, during the same period, increased by 3.2 p.c. per annum. Corresponding figures for manufacturing were 3.4 p.c. and 3.8 p.c. and those for the residual non-manufacturing industries of the commercial non-agricultural sector were 2.1 p.c. and 2.9 p.c., respectively.

In agriculture, the average annual rates of growth of output per person employed and per man-hour between 1946 and 1966 were 5.6 p.c. and 5.8 p.c., respectively. However, in view of the difficulties of measuring the number and especially the man-hours of persons employed in agriculture, data presented for this industry division should be regarded as approximate. In the commercial industries as a whole, output per person employed increased between 1946 and 1966 at an average annual rate of 3.3 p.c., and output per man-hour increased by 4.1 p.c. per annum. Corresponding figures for the total goods-producing industries were 4.8 p.c. and 5.4 p.c., respectively, per annum; for the non-agricultural goods-producing industries, 3.8 p.c. and 4.2 p.c.; and for the commercial service-producing industries, 1.1 p.c. and 1.8 p.c.

Inter-industry Shift Effects.—In addition to measuring the changes in productivity within the component industries, the aggregate productivity indexes measure the effect of shifts in employment and production between industries having different levels of produc-

tivity. One of the most significant such shifts within the commercial industries of Canada during the postwar years was from agriculture to the non-agricultural industries, where a higher level of output per unit of labour input prevails. The effect of this shift can be measured in various ways and a number of alternative calculations have been carried out for the 1946-65 annual publication,* all of which confirm, to a greater or lesser extent, that the decline in the relative importance of agriculture made a positive contribution to the total increase in output per person employed in the commercial industries during the postwar period.

INDEXES OF OUTPUT PER PERSON EMPLOYED,
COMMERCIAL INDUSTRIES, 1946-66
(1949 = 100)

Section 4.—Canadian Balance of International Payments*

Canada's total commercial and financial transactions with residents of other countries are presented in summary form in statements of the Canadian balance of international payments. The current account shows separately the principal types of transactions in goods and services with non-residents. The capital account provides a distribution of capital movements into direct and portfolio investments and into long-term and short-term forms. The difference between the current account balance and the balance of these capital movements in an accounting period is reflected in the change in the official holdings of gold, foreign exchange, and Canada's net International Monetary Fund position.

During the past decade, a wide degree of imbalance has characterized Canada's international payments. Large current account deficits have customarily been associated with periods of Canadian prosperity. High levels of investment, rising personal consumption and the growth in government expenditures, including defence outlays abroad, have contributed to the deficits. These large current deficits, which reached a peak of \$1,487,000,000 in 1959, have reflected and been financed by substantial inflows of capital. Following this record high level, the imbalances in current transactions narrowed in successive years to \$424,000,000 in 1964 but widened in 1965 to \$1,130,000,000 as a result of a sharp contraction in the merchandise surplus. At \$1,137,000,000, the current account deficit was practically unchanged in 1966.

* More detailed information is given in DBS annual report *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201), in the *Quarterly Estimates of the Canadian Balance of International Payments* (Catalogue No. 67-001) and in the *Canadian Balance of International Payments: A Compendium of Statistics from 1946 to 1965* (Catalogue No. 67-505 Occasional).

Current Account Transactions.—The surplus on merchandise trade,* which emerged in 1961 for the first time since 1954, expanded sharply in 1963 and in 1964 when it exceeded \$700,000,000; an important element in this rise was the extraordinary sales of wheat and flour to the Soviet Union and other Communist countries. Thus, the reduction of Canada's deficit on current transactions in goods and services between 1959 and 1964, followed by an upturn in 1965, was mainly the result of a shift in the balance of commodity trade. This balance varied widely; the record deficit of \$728,000,000 occurred in 1956 when it accounted for more than one half of the total current account deficit and the unusually large surplus of \$701,000,000 for 1964 exceeded the level of the merchandise surpluses of the immediate postwar years. Although substantially below this peak, the merchandise trade surplus of \$224,000,000 in 1966 was higher than the surpluses of \$173,000,000 and \$184,000,000 in 1961 and 1962. The non-merchandise deficit rose rapidly from 1955, when it still stood below \$500,000,000, to 1961, when the \$1,100,000,000-level was reached. In more recent years, the "invisible" deficit fluctuated within a fairly narrow range before increasing to \$1,248,000,000 in 1965 and to \$1,361,000,000 in 1966.

Since 1954, when merchandise exports and imports were almost equal at about \$3,900,000,000, exports increased fairly steadily to a record of \$10,326,000,000 in 1966 but imports, on the other hand, showed wider fluctuations in their growth pattern. The value of imports in current dollars rose more than 40 p.c. in two years to \$5,565,000,000 in 1956 and, except for a substantial drop of nearly 8 p.c. to \$5,066,000,000 in 1958, remained at about that level until 1960. Thereafter, the value rose at a generally increasing rate of growth to \$10,102,000,000 in 1966, which was over 80 p.c. above 1960.

In the past decade, the relative importance of exports of manufactured goods increased markedly, that of metals and minerals advanced more moderately, and the percentage share for forest products narrowed visibly. The relative position of wheat and wheat flour, which had been diminishing, recovered sharply in 1961 as a result of the large shipments of grain to Mainland China and other Communist countries. The very heavy shipments of wheat on the Russian account, together with sizable exports to Britain, Japan, Mainland China, West Germany and Eastern European countries, boosted the total value of wheat and wheat flour exports in 1964 and 1966 to about \$1,100,000,000. During the 1960s, an increasing share of the Canadian national output has moved into foreign markets. Contributing to the gain of nearly \$1,600,000,000 in merchandise exports in 1966 were larger shipments of wheat, wood pulp, newsprint, asbestos, copper, crude petroleum, chemicals and fertilizers, and manufactured goods. Within the manufactured goods group, exports of motor vehicles and parts almost tripled from about \$365,000,000 to over \$1,000,000,000 as a result of the signing at the beginning of 1965 of the Canada-United States Automotive Agreement. However, with the removal of tariffs from the two-way trade in new cars and parts, the imports also rose, but the deficit on trade in automobiles and parts narrowed in 1966. Shipments abroad of communication and other equipment, some types of machinery and firearms were larger.

The value of all imports rose sharply in 1966 to the highest recorded level of \$10,102,000,000. Motor vehicles and parts accounted for about \$500,000,000 or roughly a third of the expansion, and smaller but still substantial increases took place in imports of industrial materials, machinery, equipment and tools, and a variety of consumer goods.

The deficit on Canada's non-merchandise transactions with foreign countries, which since 1959 has been on a high plateau somewhat over \$1,000,000,000, rose to \$1,248,000,000 in 1965 and to \$1,361,000,000 in 1966. This deficit has more than doubled in the past decade. A total of \$812,000,000 or about 60 p.c. of the 1966 deficit on services was directly related to Canada's indebtedness abroad. Interest and dividend payments by Canadians to non-resident investors reached \$1,135,000,000, transfers in other forms of investment income amounted to more than \$250,000,000, and there were also growing payments

* Commodity trade statistics have been adjusted to reflect more closely the timing of transactions, particularly for investment goods, and to exclude commodities which are either covered elsewhere in the accounts or are not pertinent for balance of payments purposes.

abroad for a variety of business services. Furthermore, some hundreds of millions of dollars of earnings, which accrued to foreigners but which were retained in Canada for reinvestment, are excluded from the current account.

The contribution by travel transactions of nearly one fifth of the deficit in 1960 contracted sharply in the following years, in particular after the lowering of the Canadian dollar in May 1962 to a fixed par value of 92½ cents (U.S.). Except for a small surplus in 1963, the travel deficit fluctuated within a narrow range of roughly \$40,000,000 to \$65,000,000 between 1962 and 1966. High travel receipts on an unprecedented scale were recorded in the spring and summer quarters of 1967 as a result of an influx of foreign visitors who were attracted by Expo 67 and other centennial celebrations. Net payments of migrants' funds and inheritances, which represented about 6.5 p.c. of the "invisible" deficit in 1961, declined gradually and changed to surpluses of \$5,000,000 and \$70,000,000 in 1965 and 1966, respectively, as the number of immigrants rose to about 147,000 and 195,000 in the two years. The deficit on freight and shipping services fluctuated between about 3 p.c. and 8.5 p.c. of the total in the period 1961-66, and the value of gold production available for export served to reduce the non-merchandise deficit by between 9 p.c. and 15.5 p.c. The substantial remaining portion of the deficit, fluctuating between 36 p.c. and 45 p.c., originated from other transactions, including miscellaneous investment income referred to previously, personal remittances, business services and official contributions; these stood at a record level of \$162,000,000 in 1966 on account of large donations of wheat.

The characteristic bilateral distribution of the Canadian current account balances was maintained in 1966; a surplus from transactions with overseas countries partially covered a deficit with the United States. A substantial surplus on current transactions with overseas countries of about \$1,200,000,000, amounting to nearly three quarters of the current deficit with the United States, contributed to reducing Canada's over-all current deficit in 1964 to \$424,000,000, the lowest in about a decade. While the deficit on transactions in goods and services with the United States expanded sharply in 1965 to \$1,937,000,000 and further to \$2,017,000,000, the current surplus with the overseas areas declined below \$900,000,000 and accounted for less than 45 p.c. of the deficit with the United States. Canada's current deficit with all foreign countries stood at \$1,130,000,000 and \$1,137,000,000 in 1965 and 1966, respectively. For the first time in the 1960s, Canada's current surplus with Britain narrowed from \$505,000,000 to \$421,000,000 in 1966, but the surplus with other countries rose about 50 p.c. from \$302,000,000 to \$459,000,000.

Capital Movements.—In 1966, Canada continued to draw substantially on the resources, both real and financial, of the other countries of the world, although the net capital inflow of \$778,000,000 (excluding the change in official monetary assets) was about 60 p.c. of the net inflow of \$1,287,000,000 in 1965 and was approximately the same as that in 1964. Capital movements in long-term forms—covering direct investment, portfolio security transactions, official loans and other long-term investments—amounted to \$1,024,000,000 in 1966, up nearly a fifth from the total of \$864,000,000 in the preceding year. During the past decade, these long-term inflows of capital exceeded the deficit on transactions in current goods and services in 1958, 1961, 1963 and 1964. During this period, capital movements in short-term forms were on balance inward, except for net outflows of \$33,000,000 in 1964 and \$246,000,000 in 1966. This outflow was in sharp contrast to the net inflow of \$423,000,000 in 1965, the wide swing being in large measure attributable to foreign currency transactions of the chartered banks.

From the low levels of \$280,000,000 in 1963 and \$270,000,000 in 1964, the net inflow of capital for direct investment in foreign-controlled enterprises in Canada rose to \$535,000,000 in 1965 and to a record high of \$710,000,000 in 1966. In the main, the inflow continued to reflect investment by foreign corporations in their subsidiaries and branches, which contributed to new capital formation in Canada; enterprises in manufacturing, petroleum and natural gas received the largest portions. The flow of direct investment abroad of Canadian capital was estimated at \$20,000,000 in 1966; this considerably smaller amount than the average outflow in recent years reflected a sale by a Canadian oil company

of its foreign subsidiary. Capital inflows of \$645,000,000 in 1964 from transactions in Canadian and foreign securities matched the volume of the late 1950s but declined to \$546,000,000 in 1965 and \$303,000,000 in 1966, notwithstanding the rise in the sale of new Canadian bonds and debentures. An official request to Canadian borrowers in late 1965 for deferment of delivery of the proceeds of sales in the United States helped to boost the capital inflow from new issues of bonds and debentures to more than \$1,400,000,000 in 1966. In partial offset, retirements of Canadian bonds and debentures rose to about \$500,000,000, including some \$150,000,000 of special repurchases of government securities under the undertaking to the United States on a target level of Canada's foreign exchange reserves. There was also a substantial outflow of \$418,000,000 mainly from purchases of outstanding United States stocks from residents of that country, together with bonds of the International Bank for Reconstruction and Development. Canada's external monetary assets declined by \$359,000,000 in 1966. The official holdings of gold and foreign exchange contracted by \$462,000,000, while Canada's net International Monetary Fund position rose by \$103,000,000, about one half of this being due to the transfer of gold from the official holdings to meet an increase in the IMF quota.

Direct investment inflows have been a significant ingredient in the capital account in the past decade. Continuing and substantial for nearly the entire period, these receipts contributed in particular to resource development and to the growth of associated industries. However, from 1956 to 1959 and again in 1963 to 1965, the inflow for direct investment, substantial though it was, was less than the inflow of portfolio capital, as some of the sharply increased demands for new capital were channelled to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporations, provincial governments and municipalities were all important borrowers.

Section 5.—Canada's International Investment Position*

Canada's balance of international indebtedness reached a book value of approximately \$24,000,000,000 by the end of 1967, a sixfold increase over the past decade. Long-term foreign investment in Canada was approaching \$34,000,000,000 and other claims of non-residents added about \$5,000,000,000 to Canada's liabilities. Canadian assets abroad had a total book value of \$15,000,000,000, including long-term investments amounting to about \$9,000,000,000.

The balance of international indebtedness is a phrase generally accepted in balance of payments terminology to include equity investments as well as contractual borrowings. Its size and character have a considerable influence on Canada's balance of payments. This is true not only through the servicing of capital involving interest, dividends and miscellaneous income payments, but also through the influence of foreign investment on the Canadian economy and on the shape and direction of its external demands.

Canada has been among the world's largest importers of private long-term capital. The very substantial capital formation which was a feature particularly of the 1950s was associated with an unprecedented growth in the country's external liabilities. These investments contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and added significantly to Canadian production, employment and income. At the same time they added substantially to the continuing burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities amounted to \$35,400,000,000 at the end of 1965; non-resident-owned long-term investments in Canada reached a book value of \$29,400,000,000 (in the two decades following World War II their value quadrupled). The part of these investments in enterprises controlled outside of Canada totalled \$17,200,000,000. There was a sharp expansion in direct investments in 1965 following the more moderate rates of growth recorded in recent years. Investments in other Canadian equities, although smaller, were also substantial, and there were periods in recent years of sharp increase in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the

* This review covers Canada's international investment position in 1965, although a few estimated totals for 1967, available at the time of writing are included in the first paragraph and under the heading "Canada's Assets Abroad". An extended historical review appears in DBS report *Canada's International Investment Position, 1926 to 1964* (Catalogue No. 67-503) and more recent statistics in the annual report *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201). Additional detailed material will be found in the annual report under the Corporations and Labour Unions Returns Act.

financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore, potash and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled \$13,400,000,000 at the end of 1965 and government-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness, including equity investments, at the same date was estimated at \$22,000,000,000, more than three quarters of which was incurred since 1950.

Foreign Investments in Canada.—Dependence upon external sources of capital for financing in periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth that occurred before World War I, non-resident investment was very high and the main source of that investment was London. However, during the first part of the inter-war period, the United States became the principal source of external capital and by 1926 the portion of Canada's international debt owned in that country exceeded that owned in Britain. With some interruption during the 1930s, United States investment in Canada continued to increase, particularly after 1947 when the period of intense activity in the petroleum industry got under way. Nearly half of the United States investment in Canada at the end of 1965 was accumulated since 1956. At \$23,276,000,000, United States investments in the later year continued to represent more than three quarters of all non-resident investments in Canada and made up over 80 p.c. of the increase since 1956. The main rise occurred in direct investments in companies controlled in the United States, which almost doubled in the 1956-65 period. In the same period, portfolio investments in Canada owned in the United States more than doubled, due mainly to large sales of new issues of securities made in that country.

British investments in Canada totalled \$3,481,000,000 at the end of 1965 and accounted for only about 12 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. After reaching a low point in 1948, the value of British investments in Canada increased each year to 1962, declined slightly in 1963, partly as a result of Canadian repatriation of investments in railways and other utilities, and increased again in 1964 and 1965.

Investments of countries other than the United States and Britain reached a record total of \$2,690,000,000 at the end of 1965. Exceeding three times the 1955 figure, this represented a much higher rate of increase than had occurred in either United States or British investments, and large increases had taken place in portfolio holdings of securities as well as in direct investments. At about 9 p.c. of the total, compared with 6 p.c. in 1954, this group of countries, mostly in Western Europe, accounted for a slightly larger proportion of total foreign investments than in 1964. Over 90 p.c. of the direct investments, which totalled \$1,260,000,000 in 1965, came from Western Europe; about one quarter was of Netherlands origin, with Belgian, French, Swiss and German investments making up the next largest groups.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1953 the net use of foreign resources amounted to about one seventh and direct foreign financing to almost 30 p.c. of net capital formation in Canada. But from 1958 to 1961 when these ratios had increased considerably to 34 p.c. and 47 p.c., respectively, they were still less than the corresponding ratios in the 1929 to 1930 period when inter-war

investment activity was at its highest point. In that shorter period more than one half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was financed by external capital. After 1961 these ratios declined somewhat; from 1962 to 1965 the net use of foreign resources comprised 19 p.c. of net capital formation in Canada and direct foreign financing 43 p.c. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities and other forms of social capital. Thus, non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1963 and it should be noted that subsequent changes may have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 54 p.c. owned by non-residents but capital subject to foreign control was 60 p.c. These proportions compared with 47 p.c. and 51 p.c., respectively, as recently as the end of 1954. In the field of petroleum and natural gas, non-resident ownership and control amounted to 64 p.c. and 74 p.c., respectively, at the end of 1963, whereas at the end of 1954 non-resident ownership and control had amounted to 60 p.c. and 69 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 62 p.c. and 59 p.c., respectively, compared with 53 p.c. and 51 p.c. in 1954. However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence, non-resident ownership in a broad range of business activity, including manufacturing, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 35 p.c. in 1963. But, in the same years, companies subject to non-resident control increased from 25 p.c. to 34 p.c. their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled by non-residents. The enterprises having an investment in Canada of \$1,000,000 or more accounted for about 40 p.c. of Canadian manufacturing production in 1961 and 29 p.c. of employment in that field. About 33 p.c. of Canadian manufacturing production and 22 p.c. of employment originated with United States-controlled plants. These ratios in United States-controlled plants were somewhat higher than in 1953—the previous year for which a study of this kind was made. In some industries the proportions of production and employment in plants controlled by non-residents were much higher than this. Automobiles, for example, are produced mainly in United States-controlled plants, but this is exceptional. Other industries in which well over one half of the production is in non-resident-controlled firms include the smelting and refining of non-ferrous metals, petroleum refining, motor vehicle parts, aircraft and parts, and industrial chemicals. In several major industries like fruit and vegetable canning and preserving, and miscellaneous machinery and equipment manufacturing the distribution of control between Canadian and foreign-controlled companies is more even. In such industries as pulp, paper, and miscellaneous food manufacturing, the non-resident share is large although less than one half of the total.

There are, however, many industries where the largest part of production is in Canadian-controlled plants. Prominent among these are such important branches of industry as iron and steel mills, sawmills, feed manufacturing, clothing, and such divisions of the food and beverage group as bakeries and slaughtering and meat packing, pasteurizing and butter and cheese plants.

21.—Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1949-61

Canadian Assets Abroad.—Although there has been a great growth in non-resident investment in Canada and in the balance of indebtedness of other countries, it will be noted that Canadian assets abroad, shown in Tables 21, 24 and 25, have continued to rise in value. These now equal a larger proportion of liabilities abroad than was the case before World War II, but more than one quarter of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the war and early postwar years. At the end of 1965 the government credits outstanding had a value of \$1,496,000,000 and at the end of 1967 official holdings of exchange and Canada's net IMF position amounted to some \$2,926,000,000 in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation and the Asian Development Bank which, by March 1967, amounted to \$85,023,249, \$70,722,136, \$3,522,375 and \$2,702,700, respectively; these were partly offset by liabilities to these institutions.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. Private long-term investments abroad by Canadians in 1965 were made up of direct investments of \$3,495,000,000 and portfolio investments of \$2,136,000,000. About two thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have grown rapidly and are found in many fields, among which the beverage and farm implement industries are particularly noteworthy.

Private investments in overseas countries are widely distributed. Somewhat more than one half of the total in 1965 were located in Commonwealth countries, with slightly more in Britain than in the remainder of the Commonwealth. Most of the direct investments in Britain were in industry, while in other Commonwealth countries investments in mining were of almost equal importance with those in industry. In foreign overseas countries the largest part was in the countries of Latin America where Canadian holdings in public utilities are substantial.

24.—Canadian Long-Term Investments Abroad, 1956-65

NOTE.—Excludes investments of insurance companies and banks (held mainly against liabilities to non-residents), Canada's subscriptions to international investment agencies, and miscellaneous investments (Table 21). Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates.

Section 6.—Government Economic Planning Agencies**Subsection 1.—The Economic Council of Canada**

The Economic Council of Canada, a Crown corporation established by Act of Parliament (SC 1963, c. 11) assented to on Aug. 2, 1963, is an independent economic advisory body with broad terms of reference. Its research, analysis and recommendations on a wide range of economic and social matters are designed to help governments and private groups in developing their own longer-term plans, programs and policies. The Council consists of 28 members appointed by the Governor in Council. Included are a chairman and two directors who serve on a full-time basis in their capacity as professional economists, and 25 part-time members who are representative of industry, labour, finance and commerce, agriculture and other primary industries, and of the general public. There are no officials or representatives of government among its members and the Council has no executive or administrative functions.

The central features of the Council's duties are "to advise and recommend... how Canada can achieve the highest possible levels of employment and efficient production in order that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to recommend what government policies... will best help to realize the potentialities of growth of the economy; to consider means of strengthening and improving Canada's international financial and trade position;... to study how national economic policies can best foster the balanced economic development of all areas of Canada...". Such duties, and others stated in the Act, encompass the basic economic and social goals that have come to be widely accepted in all modern states. These aims usually are briefly stated as full employment, a high rate of economic growth, reasonable stability of prices, a viable balance of payments, and an equitable distribution of rising incomes. Since the Second World War, in a period of accelerating change, the consistent and simultaneous achievement of such objectives has become a major preoccupation of public policy. An increasing number of countries have sought to develop special procedures and machinery to facilitate the attainment of such goals. The creation of the Economic Council of Canada is a part of this development.

In carrying out its duties, the Council proceeds through a combination of professional research and analysis, consultation, and the first-hand knowledge and experience of the Council members, in order to achieve a consensus of the Council on the goals and the broad courses of action and policies to be pursued both in the private sector and among governments. The attainment of this consensus is the essence of the longer-range planning function of the Council.

Results of the Council's work are published in several forms. Since it is required to issue each year "a review of medium- and long-term economic prospects and problems",

the Council's major publications to date have been its *Annual Reviews*.^{*} In addition, the Council also has the freedom to publish on its own initiative, and to date has issued approximately 40 publications.[†] These include several of the technical and general background studies available to the Council in its preparation of the *Reviews*, special Council documents in the area of labour-management relations and industrial research and development, reports on several conferences sponsored by the Council, and several papers prepared by consultants and designed to acquaint the executives of small- and medium-size businesses with some of the new management concepts and new technologies.

In its *First Annual Review* the Council stated its underlying philosophy of approach in this way:—

"We are concerned not with the question of inventing new forms of intervention, but rather with ordering and developing our policies and social programmes in a rational and coherent manner designed to accomplish consistently what the society has declared to be its economic and social goals. For this purpose it is essential to bring to bear the needs of the future on the decisions of today. This applies not only to decisions by governments but also to decisions in the private sector of the economy."

Canada's Economic Potential

The Canadian economy since the Second World War has encountered at one time or another inflation, higher unemployment, slow rates of economic growth, and even crises in the balance of international payments. This experience serves well to demonstrate that the real problem is not how to achieve one particular economic or social objective, but rather how to attain all of them—consistently—at the same time. This is another way of saying that the various goals are not always compatible with each other; there is always an overriding requirement to reconcile conflicts.

Once there is general public agreement on the broad set of goals to be pursued, the next task is to define them quantitatively in accordance with Canadian circumstances and possibilities. This the Council has done, publishing "targets". These targets are not forecasts or prophecies but are intended to be measures of desirable performance of the economy—that is, concrete aims of public policy. These objectives or targets were first set out by the Council in its *First Annual Review* and were revised and updated in the *Fourth Annual Review*.

Full Employment.—The Council believes that, over the medium-term future, economic policies should be actively directed toward achieving 97 p.c. employment—that is, no more than 3 p.c. of the labour force unemployed. But this is not regarded by the Council as an ultimate or satisfactory goal for all time; as it has stated, "We would hope that with sustained improvement in our economic performance it may eventually become realistic to aim for an even better performance in the level of employment". The Council also emphasized that the target rate is an average annual rate allowing for seasonal variations, and is a national average within which there will be some regional variation.

The Council reported in 1967 that, over the next decade, Canada will have the most rapidly growing labour force of any industrial nation. The total labour force is expected

^{*} The *Reviews*, like all Council publications, are available from the Queen's Printer, Ottawa. They are: *First Annual Review: Economic Goals for Canada to 1970* (\$2.50, Catalogue No. EC21-1/1964); *Second Annual Review: Towards Sustained and Balanced Economic Growth* (\$2.75, EC21-1/1965); *Third Annual Review: Prices, Productivity and Employment* (\$2.75, EC21-1/1966); *Fourth Annual Review: The Canadian Economy from the 1960's to the 1970's* (\$2.75, EC21-1/1967).

[†] Among other Council publications of more general interest are: *The Contribution of Education to Economic Growth*, by Gordon W. Bertram (\$1.90, Catalogue No. EC22-1/12); *Business Cycles in Canada*, by Derek A. White (\$2.25, EC22-1/17); *Perspective on Canada's International Payments*, by David W. Slater (\$1.60, EC22-2/3); *Incomes Policies—Some Foreign Experiences and Their Relevance for Canada*, by David C. Smith (\$1.75, EC22-2/4); *Internal Migration in Canada, 1921-1961*, by Isabel B. Anderson (\$1.60, EC22-1/13); *Enrolment in Schools and Universities, 1951-52 to 1975-76*, by W. M. Illing and Z. Zsigmond (\$1.25, EC22-1/20); *Population, Family, Household and Labour Force Growth to 1980*, by W. M. Illing, et al. (\$1.00, EC22-1/19); *Canadian Policies for Rural Adjustment—A Study of the Economic Impact of ARDA, PFRA and MMRA*, by Helen Buckley and Eva Tihanyi (\$2.25, EC22-2/7); *National Conference on Labour-Management Relations, Ottawa, March 21-22, 1967* (\$2.00, EC22-367); *Interregional Disparities in Income*, by S. E. Chernick (\$1.75, EC22-1/14). A complete list of Council publications is available from the Secretary, Economic Council of Canada, P.O. Box 527, Ottawa. Also available from the Secretary are the *Annual Reports* of the Chairman, which include the Act establishing the Council and the membership of the Council.

to exceed 10,500,000 persons by 1980, an increase in 15 years of some 3,500,000 or 50 p.c. This implies an average annual addition to the labour force of some 240,000 persons in the 1965-70 period and between 230,000 and 240,000 in the 1970-80 period. The total Canadian labour force expansion to 1980 would exceed by over 500,000 the anticipated labour force growth in Britain, West Germany and Italy combined. Additions to both the Canadian and United States labour forces over the next 15 years will equal the entire existing work force of a large country such as West Germany or Britain. In Canada, women are expected to account for approximately 1,500,000 of the total increase of 3,500,000 in the labour force to 1980, and it is estimated that by that time women will make up about 35 p.c. of the Canadian labour force compared with about 25 p.c. at the start of the 1960s. To absorb this huge labour force increase and at the same time attain the 97-p.c. employment goal, the Canadian economy would have to expand rapidly enough to provide 1,200,000 new jobs in 1965-70 and another 1,200,000 in 1970-75.

Over the 1961-66 period, total employment in Canada rose by 1,100,000, although about three quarters of that increase was concentrated in Ontario and Quebec. The number unemployed dropped over the five-year period by approximately 200,000, but this figure masks a great regional diversity. The *proportion* of total unemployment actually shrank in the regions where the unemployment rate is low—Ontario and the Prairies—but rose in other regions where the unemployment rate is relatively high. Thus, regional pockets of unemployment persisted and the Council observed that “these have proved to be rather insensitive to changes in the tides of over-all economic activity”. Even at the height of the recent expansion, the relatively low-productivity and low-income regions and areas of the country—particularly the Atlantic region and eastern Quebec—continued to have unemployment rates regarded by the Economic Council as “unacceptably high”.

A High Rate of Economic Growth.—In seeking to define an objective for the total production of goods and services in the economy, the Economic Council has used the concept of “potential”. The potential of an economy is usually measured as the total volume of production consistent with reasonably full and efficient use of the nation's economic resources. Essentially, it is a measurement of the supply factors and capabilities of the economy and assumes that the demand conditions necessary for its actual achievement can be generated.

In its *First Annual Review* in December 1964—almost four years after the start of the most recent economic expansion—the Council calculated that the *potential* output of the economy would rise by an average $5\frac{1}{2}$ p.c. a year in the 1963-70 period. This was a high objective and reflected both the rapid expansion of the labour force and the taking up of the slack that existed in the early 1960s. The slack was, in fact, taken up more rapidly than anticipated and the actual growth in the economy averaged $6\frac{1}{2}$ p.c. a year in the 1963-65 period. Thus, any measurement of the potential growth rate for the remainder of the 1960s would have to be lower than that originally set by the Council in 1964, and in its *Fourth Annual Review* in September 1967 the Council calculated this potential rate for the 1965-70 period as 5 p.c. a year. At the same time, the Council extended its projections to the middle of the next decade and estimated that potential output in the 1970-75 period would rise at an average annual rate of $4\frac{1}{2}$ p.c. The 5-p.c. target to 1970 implies an average rate of growth in real gross national product (GNP) per capita of 3.2 p.c. a year between 1966 and 1970. On the basis of reasonable price stability, total GNP could be expected to rise by about \$4,500,000,000 a year on average as the economy moves to potential output in 1970.

The growth targets may be viewed as being composed of growth of employment on the one hand, and growth of productivity on the other. Thus, for 1965-70 the 5-p.c. growth target comprises an average annual rate of growth of over $3\frac{1}{4}$ p.c. a year in total employment and $1\frac{3}{4}$ p.c. for productivity. Similarly, the 1970-75 target comprises employment growth averaging $2\frac{3}{4}$ p.c. a year and productivity growth averaging 2 p.c. a year.

Reasonable Price Stability.—Price stability has been defined by the Council in the following terms:—

"A satisfactory degree of price and cost stability would exist if, in the period to 1970, average annual increases in prices and costs could be held within the limits of the 1953-63 experience—for example, in this period, the average annual increases in consumer prices and in the prices of all goods and services produced in Canada were 1.4 p.c. and 2.0 p.c. respectively, but with moderate year-to-year variations around these rates. An important condition for the attainment of this goal will be the achievement and maintenance of a reasonable price stability abroad and especially in the United States."

There was an extended period of generally good performance on price and cost stability over the 1961-66 expansion. Only when the previous economic slack had disappeared and the economy approached close to potential output at a time of rapid expansion in final demand in late 1965 and early 1966, did price increases become persistent and pervasive. The GNP implicit price index rose at the rate of 4.6 p.c. between 1965 and 1966. During 1966, price and cost pressures eased.

In its projections to 1970, the Council assumed that the GNP price index would rise at an average annual rate of 2 p.c. The Council said it would regard this as consistent with the attainment of a satisfactory degree of price and cost stability over the medium-term future, at least under conditions of reasonable price stability abroad, particularly in the United States. Such an average rate of price increase would imply that some demand components—government expenditures, housing, and business investment in plant and equipment—would rise at a somewhat faster rate than the total and that the rate of advance in consumer prices and in export and import prices would be somewhat less. The Council added:—

"We recognize that the achievement of this degree of price and cost stability will be extraordinarily difficult under conditions of high demand and high employment, as has been amply demonstrated by developments of the past three years. However, we continue to regard it as one of the basic goals towards which Canadians should continue to strive in the conduct of their economic affairs, with particular emphasis on longer-range policies designed to deal with basic structural and regional problems—that is, policies which would facilitate the consistent achievement of both our employment and price goals."

A Viable Balance of Payments.—After careful reappraisal in 1967, the Council concluded that the balance-of-payments goal set out in 1964 was appropriately formulated in terms of a current account deficit (and accompanying net capital inflow) at potential input in 1970 in the order of \$1,500,000,000 to \$2,000,000,000 and that this goal is still relevant.

The current account deficit was \$1,100,000,000 in 1966. It is estimated that this deficit will widen somewhat over the 1966-70 period and that, at potential output in 1970, it could be in the neighbourhood of \$1,700,000,000. The total deficit will be accounted for entirely by the deficit on services, which is projected to rise from \$1,500,000,000 in 1966 to \$1,900,000,000 at potential output in 1970. A small surplus on merchandise trade would continue.

The current account deficit of \$1,700,000,000 at potential output in 1970 would represent about 2.2 p.c. of GNP, a smaller reliance on the net import of resources from abroad than in several past periods of strong economic growth. The equivalent net capital inflow would also be correspondingly small in relation to GNP and would represent a reduced reliance on net foreign capital inflows in relation both to the domestic investment and domestic savings, compared with most previous periods of strong Canadian economic growth. At potential output in 1970, net capital inflows would make up less than 10 p.c. of the estimated total demand for savings of \$18,100,000,000. However, the Council observed that the \$1,700,000,000 capital inflow would still be a very sizable requirement for external financing in circumstances of a prevailing world shortage of capital, uncertainties about moves to strengthen the international monetary system, and possibly continuing

strains in the United States balance of payments. Thus, it would be inappropriate to assume that the external capital will always be easily available on the scale needed by Canada.

Equitable Distribution of Rising Incomes.—This is an extremely complex goal, defying simple formulation. The Council believes that much more information is needed about the distribution of income among individuals, families and various occupational groups. For example, why do some groups receive little benefit from the general rise in incomes and living standards? What elements lie behind the vicious circle of poverty that still traps far too many people? Although some of these problems may range far beyond the field of economics, the Council has said that these difficult matters will have to be understood and faced if appropriate policies are to be devised to achieve the goal of equitable distribution of rising incomes.

In this field, the Council's work to date has been concerned largely with the identification, measurement and analysis of regional disparities. The problem of assuring an appropriate participation on the part of each region in the over-all process of national economic development has long been an elusive goal and a continuing concern of the people of Canada. The Council's analysis showed that over the past four decades there has been relatively little progress toward the achievement of a better balance in this respect. Despite various policies and programs, very wide disparities have continued to exist in average per capita income. Also, there have continued to be wide differences in the extent to which the human and material resources of each region have found opportunities for productive use. Although national prosperity has always tended to have a favourable influence everywhere, rapid national growth has not by itself served to bring about any significant or lasting reduction in these large and stubborn differences.

Regional levels of personal income per capita (in current dollars) are shown for three selected groups of years in the following statement. Provinces are ranked in order of level of income in 1963 and the data are for three-year averages centred on the year shown.

<i>Province</i>	<i>1927</i>	<i>1947</i>	<i>1963</i>
	\$	\$	\$
Ontario.....	509	981	2,025
British Columbia (incl. the Yukon and Northwest Territories).....	535	980	1,966
Alberta.....	509	923	1,750
Saskatchewan.....	449	818	1,749
Manitoba.....	455	875	1,721
Quebec.....	378	709	1,521
Nova Scotia.....	299	676	1,302
New Brunswick.....	277	609	1,167
Prince Edward Island.....	248	477	1,115
Newfoundland.....	1,009
PROVINCIAL AVERAGE.....	407	783	1,532

The most striking features of the above comparisons are the substantial percentage differences in income levels between the highest and lowest province and the fact that the rankings of the provinces in terms of income levels have hardly changed over a period of almost 40 years.

The Council concluded that efforts to promote more regionally balanced growth should be aimed at achieving a more rapid increase in the incomes of the lagging regions by methods that would not retard the development of the faster-growing areas of the country. In this way the economic growth of the national economy would be improved for the benefit of all regions in Canada. The Council said that, in order to accomplish this result, it is essential that regional development policies be directed to two basic objectives—the increase of

opportunities for high-productivity employment and the acceleration of programs that can make the maximum contribution to improvements in productivity generally in the region. The Council suggested the following guidelines for action:—

- (1) the avoidance, as far as possible, of subsidies merely to create temporary activity or to sustain indefinitely low-productivity industries and declining occupations;
- (2) encouragement of efficient agglomerations of activity—growth centres—within the different regions in order to achieve increasing economies of scale, larger markets and more useful pools of skills, and to avoid uneconomic scatter and dispersion;
- (3) the taking of decisions in respect of investments in social capital in accordance with an adequate consideration of the economic and social benefits to be obtained in relation to costs;
- (4) the recognition of the urgent need to make available additional financial resources to the governments of the lower-income regions and through the appropriate federal agencies in order to help break the vicious circle of low productivity, low incomes, low government revenues and low investments in growth-promoting services which are needed to improve the quality and effective utilization of the available human and material resources—in particular, education, training, research, health, transport facilities, resource and industrial development and the development of wider markets;
- (5) the necessity for close co-ordination in the formulation and implementation of consistent regional development policies and programs among all levels of government; this is particularly important in view of the wide range of programs and policies affecting regional development, both on the part of the provinces and through certain federal agencies such as the Atlantic Development Board, the Area Development Agency and the Agricultural and Rural Development Administration; and
- (6) the avoidance of self-defeating restrictive and divisive measures which interfere with the free flow of goods, capital, labour and enterprise between all the provinces; such measures must be avoided if we are to achieve simultaneously the twin goals of more satisfactory growth in every region and a rapid expansion of the national economy from which all would benefit.

The Council observed: "It is clear that the narrowing of inter-regional income disparities and the achievement of a more regionally balanced economic growth involve large, urgent, and especially challenging tasks. Many decades of experience have shown that these tasks cannot be accomplished by piecemeal expenditures, superficial expedients, unproductive works and mere transfers of income. The appropriate policies and programmes will need to be formulated within a long-run consistent framework and carried out with a continuing regard for the real and underlying problems involved."

Prosperity and Price Stability

The Canadian experience in the prolonged expansion that began in 1961 serves well to illustrate one of the major, recurrent difficulties faced by modern industrial nations in the postwar period—namely, that of achieving reasonable price stability in periods of high growth and rapid gains in employment. In general, the leading nations have demonstrated far better performance in this respect over the past 15 years than in the inter-war period. Much of this improvement can be attributed to a better public understanding of the broad forces at work within modern economies, and to better use of the policies capable of influencing these forces. In particular, there has been a growing appreciation of the importance of total supply and demand within economies and of the role of the "big levers" of fiscal and monetary policy in affecting these aggregates. It is realized that severe inflation is brought about fundamentally by excessive pressure of total demand for goods and services on the available supply, while heavy unemployment is the result of large relative deficiency in demand. It is known that the principal remedy for both of these extreme conditions is the operation of fiscal and monetary policy to restrain or stimulate the growth of total demand, as the case may be, and bring it back into a proper relationship with the growth of potential output.

In 1965, the Government of Canada requested the Economic Council to launch a broad examination into prices, costs, incomes and productivity, and their relationship to sustained economic growth. Specifically, the Council was requested to (1) study factors affecting price determination and the interrelation between movements in prices and costs

and levels of productivity and income; (2) to report on the relationship to sustained economic growth and to the achievement of high levels of employment and trade and rising standards of living; and (3) to review the policies and experiences of other countries in this field and their relevance for Canada. A substantial part of the Council's *Third Annual Review* was devoted to its report on these matters.

In attempting to reconcile the goals of high employment and reasonable price stability, many countries have adopted what are known as "incomes policies" or "wage-price guidelines". The ways in which these policies and other measures were developed and used in the United States, Britain, France, Sweden and the Netherlands were studied at length by the Council. In general, the Council found that these policies—which in many cases relate permissible price increases to recent levels of productivity—had some educational value but were seldom enforceable without the use or threatened use of government sanctions against parties who violate the guidelines. The effect of such policies was extremely difficult to measure. The Council's study indicated that once an economy is operating at high levels of demand and employment, wage and price increases tend to break through whatever guidelines have been established. Wage-price explosions have often followed periods of comparative stability attributed to incomes policies.

The Council concluded that this type of policy is not well suited to Canadian circumstances. An incomes policy would have the best chance of success in a unitary state, with strong central powers, a tradition of government intervention in the detailed functioning of the economy, and few constitutional impediments to government use of direct controls if necessary; private economic power would be relatively concentrated, and both union and management organizations would be strong and centralized. Obviously, Canada is far indeed from being such an environment. The threat of resort to direct wage and price controls as sanctions would be a hollow threat in Canada; the Federal Government has not now the power to institute such controls in major areas of the economy and in practice has been able to get such constitutional power only in wartime. In addition, regional differences hardly favour such a policy in Canada. Another factor weighing against such a policy is Canada's increasing economic interdependence. Price-increasing developments in international markets—where prices for a wide range of Canadian products are determined—might be bringing about rapid rises in profits and incomes in a number of primary exporting industries, and little could be done about it except to explain to the public why the situation must be tolerated.

The main thrust of the Council's recommendations, therefore, was along the lines of improving the use of basic monetary and fiscal policies, better planning of government expenditures and programs, lessening market rigidities, strengthening competitiveness, promoting greater mobility of resources, including manpower, removing inequities and enlarging public understanding of all these matters. Said the Council: "We feel that for all their troubles and imperfections—for all the static and turbulence which they periodically generate—the essentials of the institutions of free collective bargaining and of flexible and relatively decentralized determination of wages and prices should be preserved. In the long run, they seem likely to be more compatible with good all-round performance by the Canadian economy than any visible alternative."

The Council found that, in the past, Canada's use of fiscal and monetary policies has often been too closely geared to minor, short-term economic fluctuations. They could be used more effectively to stabilize larger economic fluctuations over longer periods—to moderate prolonged pressure against resources, or reduced persistent economic slack. Within this setting, the Council added, further conditions are vital—favourable international conditions, a correct setting of the exchange rate, and adequate complementary policies to improve the supply side of the Canadian economy. The Council found that up to now there has been a relative neglect in Canada of policies to increase supply, both in general and in areas of particular pressures.

One of the main problem areas detected by the Council was that of construction spending. In the postwar period, such spending has shown a special and unique potential for

aggravating or even inducing economic instabilities, with consequent repercussions on general costs and prices. Over the past 15 years demand for construction in Canada has swung widely—residential building from a 25-p.c. increase in one year to a 17-p.c. decline two years later, non-residential construction from plus 40 p.c. to minus 9 p.c. over two years, and government construction outlays from plus 32 p.c. to minus 7 p.c. from one year to the next. The Council said governments must be assigned a major contributing role as a destabilizing element in the over-all construction situation. In all three construction booms since 1950, outlays by all levels of government have reinforced and aggravated the excessive demand on the construction industry. Moreover, in the three recessions since 1950, government construction outlays have declined, adding to the weakness of demand in other sectors of the economy. In the 1963-66 period, demands on the construction industry pressed very hard on its supply capacity. The result was sharply higher wages in construction, strong increases in building materials prices, sharply higher bid prices on new contracts, increases in costs and prices on projects already under way, and fewer bids per construction contract. In such a situation, cost and price increases spill over into a broad front of labour and material resources.

The Council said that, to help stabilize construction demand, it would be appropriate to press for the development of business attitudes encouraging longer-term planning of business investment expenditures. However, the Council also strongly recommended steps to smooth out the growth of government-determined construction. This recommendation applied to all levels of government but the Council believed that the leadership must come from the Federal Government. The Council said that much of the need for government construction is foreseeable for some years ahead and there is room for better government planning and scheduling of such projects in relation to medium-term economic prospects and the likely demand-supply situation in the construction industry in key areas. Within the Federal Government itself, the Council saw a need for greater centralization of information and decision-making about construction expenditures.

The following were among the Council's other conclusions in this area:—

In the interests of better public education and information regarding current economic developments, including those in the field of prices, costs and incomes, steps should be taken to establish an independent institute of economic research along the lines of those already existing in many other countries. A major function of such an institute would be the publication of a regular bulletin containing analysis of short-term developments in the Canadian economy and other articles dealing with significant changes and problems.

A further examination is needed of problems of consumer protection and the exercise of market power in the Canadian economy. The emphasis should be on a consistent and continuous set of policies, based on well-founded and well-understood principles. [The Federal Government recently referred these matters to the Council for special study. The terms of reference are: "In the light of the government's long-term economic objectives, to study and advise regarding (a) the interests of the consumer particularly as they relate to the functions of the Department of the Registrar General (now the Department of Consumer and Corporate Affairs); (b) combines, mergers, monopolies and restraint of trade; (c) patents, trademarks, copyrights and registered industrial designs". The Council's work on this special study was well under way in the early part of 1967.]

Much more basic economic research needs to be done on problems relating to prices, costs, incomes and productivity in the Canadian economy. More adequate resources should be made available for these and other areas of economic research. In addition, there is a general and immediate need for improvements in price and other economic statistics. For this purpose, the Dominion Bureau of Statistics should be substantially strengthened.

In the light of underlying factors which have significantly altered the world and the Canadian food situation, and some of which are likely to continue for some time, it is more than ever important that effective measures be taken to increase productivity at all stages of food production and distribution.

Governments should take immediate steps to improve the discharge of their responsibilities as major employers and increasingly large-scale direct participants in the process of collective bargaining. The object should be to develop sound criteria and principles and to avoid disturbing repercussions on the climate of collective bargaining in the private sector of the economy.

Programs for productivity improvement and adequate measures for dealing with the manpower problems arising from technological and other change should be pressed ahead with all possible speed. The programs should operate both at the general and at the industry and plant level. (In early 1967, the Council published a set of principles to guide labour and management in their efforts to cope with the manpower implication of technological and other changes in industry [see below].)

The annual autumn meetings between federal and provincial finance ministers and treasurers should be developed into a major vehicle for the improvement of longer-term planning and the better co-ordination of expenditure programs and other fiscal matters by the three levels of government. A number of basic economic documents should be published prior to such meetings to serve not only as background for them but also as a basis for stimulating broader public debate about economic developments, problems and potentialities in advance of the formulation of annual budget policies. A standing committee on economic affairs from the Senate and the House of Commons should be established, one of the functions of which would be to hold annual hearings on economic issues arising out of the above-mentioned documentation and discussion.

Sources of Economic Growth

The Economic Council has emphasized repeatedly that productivity gains are the essence of economic growth, in the sense that they are the real source of improvement in the average living standards of people—that is, in average incomes. By productivity is meant the increase in the output of goods and services in relation to the resources required to produce them. Increases in productivity are generally traced to two basic kinds of influences:—

- (1) Improvements in the productive quality of the factors of production. (This would include rising levels of knowledge, education and skill in the labour force—including the managerial group—and better machinery and equipment, or higher quality natural resources.)
- (2) Improvements in the efficiency with which the productive factors are combined. (By this is meant, for example, a more efficient organization of the production process, increased specialization and larger scale of production, and shifts of manpower and capital from less-productive to more-productive lines of employment.)

The measurement and analysis of productivity still bristles with technical and conceptual difficulties. Further complications arise from the fact that the factors are frequently interrelated—advancing technology and better management and skills go hand in hand; increased scale and specialization require not only expanding markets but also flexibility and adjustability of economic resources. There is still much to learn about how these various factors act and interact, and it is extremely difficult to isolate the role and importance of any one of them. Despite these difficulties, the Council has devoted a large part of its research effort to these matters in the hope of improving public understanding of the real sources of growth in incomes and living standards.

Education and Economic Growth.—The basic role of education as a factor contributing to economic growth and rising living standards was stressed in the Council's *First Annual Review*, especially in the discussion of Canada's vital need for creating and maintaining an adequate supply of professional, technical, managerial and other highly skilled manpower as a basis for future growth. The *Second Annual Review* attempted a closer examination of education as a factor in growth. The Council recognized that its work in this difficult area was in the nature of a pioneering venture, but considered it useful to make some initial findings and conclusions:—

Average years of education per person in the male labour force rose rapidly and fairly steadily from 1910 to 1960 in the United States, with gains of 9 to 10 p.c. in each decade over that half-century. The Canadian increases were somewhat more uneven and were also consistently below those in the United States. Consequently, it is estimated that, although average years of schooling increased by less than 40 p.c. in Canada, the comparable increase in the United States was about 60 p.c. There has thus been a widening educational gap between the two countries. This gap appears to have widened particularly at the secondary school level in the inter-war years, and particularly at the university level in the postwar period. For example, in 1960 about 45 p.c. of the United States male labour force had four years of high school or more education, compared with only 24 p.c. in Canada in 1961.

The Council estimated that the Canada-U.S. differences in the average educational attainments of their respective labour forces account for approximately one third of the difference in productivity between the two countries. The Council's analysis also suggested a strong relationship between individual income levels and educational attainments. For example, in Canada the average income of those who have completed four to five years high school is more than one and a half times the average of those who have only elementary school education; and those who have university degrees have an average income which is more than two and a half times the average of those with only elementary school education, and more than twice the average of those who have only one to three years of high school.

A rough estimate of the 'profitability' of education can be made by calculating the extra income which on average is associated with a higher level of education, against the extra outlays and costs involved in obtaining such an education. On the basis of such calculations, it was estimated that returns on the 'human investment' in high school and university education in Canada are in the range of 15 p.c. to 20 p.c. a year. This is a somewhat higher rate of return than has been calculated for the United States.

The benefits from increased education, according to certain calculations and assumptions, are estimated to have accounted for a share in the general order of one quarter of the increase both in the average standard of living and in the productivity of Canadians from 1911 to 1961. Although this is a large contribution, it is apparently substantially lower than that indicated in comparable estimates for the United States.

Canada now faces a general shortage of manpower with higher educational attainments. The shortages extend from the high school level on up, and are most severe at the professional and university level. These deficiencies in the supply of skills constitute one of the major obstacles to be overcome in achieving a satisfactory rate of improvement in productivity and of economic growth in Canada.

The future benefits from increased efforts in education are very large, and the economic returns to the nation from increased investment in education are likely to exceed by a considerable margin those from most other types of expenditure. This economic gain is complementary to the contribution of education to the human, social and cultural development of individuals.

In the light of these findings, the Council recommended that the advancement of education at all levels be given a very high place in Canadian public policy, and that investment in education be accorded the highest rank in the scale of priorities. In particular, the Council urged that immediate attention be given to:—

- (1) The rapid and substantial expansion of post-secondary education in all parts of Canada. The aim should be to provide a ready opportunity for higher education to every qualified Canadian student so that financial obstacles will be eliminated as a barrier to higher education. A substantial increase in funds for research is a necessary feature of expanded and improved education at the higher levels.
- (2) The closing of the remaining gaps in school facilities and professional resources at the secondary school level so that such education is a real and practical possibility for all Canadian children.
- (3) The development and implementation of greatly expanded programs to upgrade and bring up to date the education and skill qualifications of the existing labour force, including professional workers and management. Continuing education and retraining must play an ever-increasing role in the future.
- (4) Social and other measures to reduce drop-outs in high school and thus achieve a much higher rate of high school completions.
- (5) Vigorous efforts through research, the use of new techniques, and the upgrading of the qualifications of teachers to improve the quality and methods of education.
- (6) Closer co-operation between business, labour and the educational system, along with improved counselling of students, regarding future manpower needs and the most effective ways of meeting these needs.

Scale and Specialization.—Whereas the over-all productivity in Canada has been estimated to be one fifth lower than in the United States, the Council in its *Fourth Annual Review* estimated that, in the manufacturing area alone, the productivity gap between the two countries appeared to be in the order of one third or more. This difference reflects in considerable part the way in which production is organized—diversification, mechanization, technology, efficient use of resources, management, morale, attitudes, etc. The measure should not be taken simply as a reflection on the energy, basic ability or enthusiasm of Canadians.

Many factors may influence the size of the productivity gap in manufacturing. One of these—but only one—is scale and specialization. The term “economies of scale” is rather loosely used and in some discussions seems to be used almost synonymously with “size of market”, “size of firm”, “size of plant” or “size of production runs”. The latter—the size of production runs and the degree of specialization or diversification of production—appears to be highly relevant. There is a general pattern of greater diversification of products and typically shorter production runs in Canadian plants. This involves frequent changes and interruptions in production and scheduling, and this in turn contributes to less-efficient use of both manpower and capital, and has a pervasive upward influence on all the basic categories of cost per unit of output. The Council believes that greater specialization would contribute to the lowering of costs of all major types—material, labour and overhead. It would make possible in many lines of production an increase in output with essentially the same quantity of labour and capital facilities. This would reduce labour and overhead costs per unit of output and permit similar economies in materials on the basis of comparable developments in firms supplying materials and components.

Why has not more specialization occurred in Canadian plants? Many factors may be involved—national commercial policies, business concepts and practices, institutional factors, uncertainty about the application of restrictive trade practices legislation, purchasing practices of provincial and municipal governments, etc. In the Economic Council's view, a major part of the answer lies in the existence of both Canadian and foreign tariffs which have either reduced incentives for, or inhibited, greater specialization. Canada's commercial policy was historically designed to a considerable extent to foster a wide diversity of manufacturing activity in Canada. Tariffs play a role in the higher cost of manufactured products in Canada, contribute in an important way to the development and maintenance of short runs and, in turn, increase the production and overhead costs of Canadian producers. The structure of tariffs also indirectly restricts the extent of scale and specialization.

Now that the Canadian economy has grown and developed in many ways, a re-examination of the effects of the tariff has become increasingly essential, the Council reported. The Council observed that it is sometimes suggested that one route toward increased scale and specialization would be to facilitate intercompany agreements to permit more specialized patterns of production between firms and longer production runs within the plants of various firms. But the Council said it should be recognized that industrial rationalization may reduce competition within Canada, especially in circumstances in which trade barriers protect producers from external competition and in which there is already a relatively high degree of industrial concentration in many lines of Canadian manufacturing. The Council's conclusion:—

“The route of tariff reduction for manufactured products is, in our judgment, the most promising of all routes towards increased specialization in Canada and the consequent narrowing of the existing gap in productivity in manufacturing between Canada and the United States. By ‘tariff reduction’ we mean negotiated reductions in both Canadian and foreign tariffs.”

The Urbanization of Canada

The urbanization of any nation is closely related to the structure and growth of its economy and to rising income levels. In Canada, almost three quarters of the population lives in cities and towns occupying less than a hundredth of the total area of the country. The Economic Council says this degree of urbanization will continue to increase. Between 1966 and 1980, Canada's urban population is projected to rise by almost 5,800,000 people to over 20,000,000. By 1980, about 81 p.c. of the total Canadian population (estimated to reach almost 25,000,000 by then) will be urban and some 60 p.c. will be concentrated in 29 large city complexes of 100,000 or over. The net population gain to these large cities between now and 1980 is expected to be 4,500,000—a number equal to the combined total for metro Toronto and metro Montreal in 1967. The population

growth of these two large metro areas combined is expected to be 2,500,000 in the period to 1980, so that taken together they may well total 7,000,000. Metro Vancouver is expected to go substantially over 1,000,000. Thus, by 1980, one out of three Canadians will live in one of these three large centres. A second group of six cities in the 500,000-1,000,000 population range—Winnipeg, Ottawa, Edmonton, Calgary, Hamilton and Quebec City—will have a combined population of about 3,600,000 by 1980. By then Canada is also likely to have about 20 cities in the 100,000-500,000 range, with a combined population of close to 3,500,000. Almost half of these 20 will lie along or close to the St. Lawrence River and lower Great Lakes. Thus, with the larger centres, they will contribute to the formation of an urban system stretching over a distance of about 600 miles.

This increasing urbanization in Canada has important implications for housing, social capital, municipal expenditures, fiscal capacity, and the many problems of big-city life including traffic congestion, air and water pollution, protection from crime, requirements for schools and recreational services, etc. In the Economic Council's view, this challenge calls for new and imaginative public policies involving all three levels of government, and new priorities in the allocation of resources. The Council, in fact, detects an "urgent need to update attitudes and approaches to over-all urban development and to certain commitments to resolving the complex and growing problems generated by such development." It adds:—

"It is understandable that traditions of deeply rooted attachment to the land and natural resources that have shaped our national identity should persist strongly in our national consciousness. But without attempting to decry these values in any way, it is clear that they are hardly adequate today. In the second century of Confederation, it is essential to recognize and accept the predominantly urban character of Canadian society, and to adopt policy approaches capable of dealing with the many new, pressing and difficult challenges."

Transportation.—The number of cars and trucks in Canada could increase by 60 p.c. to almost 11,000,000 by 1980, or one vehicle for every 2.3 persons. Projections suggest that 20 p.c. of Canadian families will own at least two cars. Large public investments will be needed to prevent traffic congestion from becoming ever more serious. The investment in urban expressways, arterial thoroughfares, collectors and rapid transit between now and 1980 could well exceed \$4,000,000,000 for centres of 100,000 or over. In the Council's judgment, "the problem of providing adequate urban transportation today ranks in economic importance with that of developing the national transcontinental transport system in the past".

Housing.—To meet the housing demand implied by its projections of new family and household formation, the Economic Council estimates that Canada will need an average of some 190,000 new housing units a year between 1966 and 1970—a four-year total of over 750,000 new units, with a heavy volume of completions concentrated in the latter part of the period. This housing demand is expected to continue to rise during the 1970s, reaching about 1,100,000 units in the first half of the decade and 1,300,000 to 1,400,000 units in the second half.

By the late 1970s about 90 p.c. of this housing construction will be in the cities. Further, with the increasing concentration of population in the largest of these urban complexes, new housing construction will shift increasingly to the metro areas. From an estimated volume of 630,000 units required in cities of 100,000 or over in 1966-70, it is anticipated that there will be a rise to about 800,000 in the first half of the 1970s and to somewhat above 1,000,000 in the second half. This implies that by 1980 the annual new housing demands of our 29 largest urban complexes will be as great as the entire national demand in 1970. If recent trends continue, by 1980 upwards of two thirds of this new construction in the large cities will take the form of apartments and other forms of multiple housing such as row-housing, duplexes and so-called town houses.

These estimates of new housing construction make allowance for a rising rate of replacement demand on the assumption of vigorous programs of renewal and redevelopment in the decaying areas of the larger and older cities. The 1961 Census did not reveal an extreme proportion of dilapidated housing and, in fact, the incidence of dwellings "in need of major repair" is rather less pronounced in the larger areas than for the country as a whole. Nevertheless, it appears that perhaps as many as 1,000,000 Canadians were housed as of 1967 in substandard dwellings of this kind, and that about one quarter of these were in the large cities. The Council observed:—

"With further rapid urbanization, the economic and social costs of poor housing and urban decay are bound to mount sharply unless long-range rehabilitative and preventive measures can be substantially widened and improved. Any acceleration of urban renewal, however, will clearly intensify the already pressing need for a great expansion in public housing. It will be essential to assure alternative and appropriate accommodation for the increasing numbers of people who may be displaced as a consequence of renewal projects. Successful and consistent development in both areas appear certain to require more comprehensive financial participation in total costs on the part of the senior governments, together with increased initiative, experimentation and integration in over-all planning by civic administrations."

Water Supply and Pollution Problems.—With the continued high rate of urban growth, the problems of adequate water supply and the disposal of domestic and industrial wastes are certain to grow more serious. For example, as the urban centre becomes larger it tends to use more water per resident. The average daily intake of water in Canada's 18 largest cities now is around 125 gal. per resident. It appears that by 1980 average daily consumption per person will rise to roughly 200 gal. Thus, it is estimated that, over the next 15 years, the largest cities must increase their water-supply capacity by some 1,500,000,000 gal. daily.

After use, approximately 80 p.c. of the urban intake of water for domestic and industrial purposes is discharged into the sewerage system. It is estimated that in 1960 only about 9,000,000 Canadians, or 75 p.c. of the urban population, were served by a sewerage system. Thus, a large volume of water intake in Canada is returned to streams and lakes in the form of raw or imperfectly treated sewage. Even where sewerage systems and treatment facilities exist, the prevalence of combined storm and sanitary sewers in many of our larger and older cities causes a considerable leakage of raw sewage during high-runoff periods.

The growing requirements for municipal water and sanitary facilities over the next 15 years will be added to a significant backlog of facilities in many areas. Since the 1930s, the capacity of these municipal services has grown at an annual rate of approximately 6 p.c.—or twice as fast as the growth in the urban population over the same period. If this relationship continues to apply over the next 15 years when 6,000,000 persons will be added to the urban population, it is estimated that the facilities will have to be doubled at an investment averaging roughly \$130,000,000 a year.

Air pollution problems will also mount. The major source of air pollution is the combustion of fuels such as oil, coal, natural gas and gasoline. For example, when measured in terms of weight, it is estimated that for every 100 tons of motor fuel used in combustion, almost 60 tons of carbon monoxide, hydro carbons and nitrogen oxide are discharged into the atmosphere. With the number of vehicles and traffic density increasing rapidly over the next 15 years, the prospective increase in the volume of pollutants from this source alone is massive. In some areas this air pollution threatens to be a serious health hazard. Although the relationship between air pollution and morbidity is difficult to establish, it has been estimated that in Canada 600,000 working days are lost each year as a result of chronic bronchitis and emphysema, attributable to impurities in the air.

Much remains to be learned before realistic and commonly accepted standards of air and water pollution can be established to guide a rational management or control policy, the Economic Council reported. Nevertheless, the Council regards the adoption of a set of standards as an essential first step in defining the goals for a policy of water

management or pollution control. This would imply the need for an extensive program of research that goes beyond the purely technical aspects to consider the social and economic implications of pollution as well.

Municipal Organization.—Although the 1961 Census showed Canada having only 18 metropolitan areas or large city complexes of 100,000 people or more, within these areas there were some 260 separate municipal government jurisdictions, together with an unknown number of semi-independent, single-purpose special authorities such as school boards, water boards, transit and utility commissions, and sewerage districts. In the opinion of the Council, it is doubtful whether this multiplicity of independent municipal units within a single metro economy is or can be effective in coping with the range and multitude of urban problems. The Council called for rapid modernization of local government structures, powers and administration, with the clear aim of building a structure of local government whose physical area of responsibility, extent of authority and political and administrative machinery are all in line with the range and scope of the problems to be dealt with. In many cases this would mean larger area boundaries and in others it would require more effective arrangements for inter-municipal co-operation and co-ordination. In the field of area-wide structure, the Council suggested that only strong provincial leadership is likely to be effective in the face of the attachment of local interests to entrenched fragmentation.

Municipal Finance.—Many municipalities in Canada have been caught in a squeeze as their own revenue sources—mainly the property tax—have failed to keep up with their spending requirements. In 1953-63 these taxes rose one and one half times as fast as personal income. The need to make annual decisions about whether to raise tax rates or assessment has some clear advantages for budget restraint and is in the interest of municipal taxpayers, but in the view of the Council it may create some built-in discrimination against services performed at the municipal level no matter how important they may be in relation to growth or the general welfare. In the large urban areas the squeeze will become tighter over the period to 1980 unless action is taken. The Economic Council said in part:—

“... there is now a widening gap between the expanding responsibilities and the revenues of the larger cities of the country. This is now a nation-wide problem, and it is clearly necessary either to shift further responsibilities and related costs to higher levels of government or to develop and support local revenue systems so that they are more closely related to both the benefits and burdens of an increasingly complex, urbanized society. In either case, the change can be accomplished only within a comprehensive fiscal planning framework covering all levels of government.”

Subsection 2.—The Atlantic Development Board

The nature and magnitude of the economic problems of the Atlantic region have been the subject of numerous studies over the years, and of frequent submissions to federal authorities and royal commissions. All of them indicate that, compared with the remainder of Canada, the economy of the Atlantic Provinces (New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland) has been characterized by significantly lower levels of per capita incomes, manpower utilization, productivity per worker, capital investment and public services. The Federal Government has responded to these persistent problems in several different ways, one of which was the establishment of the Atlantic Development Board by Act of Parliament in December 1962 (SC 1962-63, c. 10). The Act was amended in 1963 (SC 1963, c. 5) and 1966 (SC 1966-67, c. 31). The first amendment established an Atlantic Development Fund of \$100,000,000, and the second increased it to \$150,000,000. In addition to this Fund, the Board received \$55,000,000 (\$30,000,000 in 1965 and \$25,000,000 in 1967) in special Parliamentary appropriations to assist the four provinces in trunk highway improvements on a cost-sharing basis.

Functions of the Board are basically twofold: to undertake programs and projects aimed at stimulating the economic growth of the region; and to prepare, in consultation

with the Economic Council of Canada, an economic development plan for the region. The Board's staff, located in Ottawa and numbering 27 professional and 29 supporting personnel as at Mar. 31, 1967, reflects these functions, being organized into a Program Division and a Planning Division, under an Executive Director. The Board itself consists of 11 members resident in the Atlantic region, three from each of the larger provinces and two from Prince Edward Island. Board members, including the Chairman, are unpaid. The Board meets every two or three months at some centre in the region, and once annually in Ottawa.

One of the obvious factors responsible for the continuing lag in the economic growth of the region has been the inadequacy of its infrastructure, the basic services which are the foundation of every modern economy. Consequently, during its first four years the Board has concentrated upon infrastructure—making grants to the provinces for electric power development, sharing in the cost of building modern trunk highways, constructing industrial water systems, assisting in the development of industrial parks and sites, contributing to the cost of facilities for postgraduate and industrial research, and providing other basic services to industry.

The aims of the Board's planning activities are to identify the potential of each sector of the regional economy; to formulate policy recommendations for achieving this potential; to integrate the various sector studies into a single comprehensive and internally consistent plan; and to indicate the implications of the plan for employment, income and population. The plan will serve as a guideline for the Board in making its recommendations on development projects and will provide a framework to assist other federal agencies and provincial authorities in formulating long-term development policies and the priorities to be attached to specific programs. The private sector, too, should find the plan valuable by identifying areas for new investment.

In all its work, the Board acts in close co-operation with the provincial governments as well as with other federal departments and agencies. Although there is no formal procedure for bringing projects to the attention of the Board, the Board follows the practice of consulting the provincial governments concerned before taking action on specific projects; each government has designated officers to maintain liaison with the Board. Less formal contact is also maintained in many ways. Because of its unique interest in the Atlantic regional economy, the Board is called upon frequently to act as co-ordinator on matters involving several federal, provincial, municipal and private agencies.

By Mar. 31, 1967, projects costing an estimated \$98,714,000 had been approved and expenditures amounting to \$54,069,000 had been made against that amount, leaving outstanding commitments of \$44,645,000. The projects are as follows:—

<u>Project</u>	<u>Projects Approved</u>	<u>Funds Disbursed</u>
	\$	\$
POWER—		
Bay d'Espoir, Nfld.—hydro-electric power development.....	20,000,000	19,000,000
Mactaquac, N.B.—hydro-electric power development.....	20,000,000	16,980,878
Nova Scotia Power Commission—thermal power plant at Trenton	12,000,000	—
Power cable to link Prince Edward Island with mainland.....	4,300,000	25,000
Newfoundland and Labrador Power Commission—conversion to 60 cycles.....	4,000,000	3,055,164
Maccan to Amherst, N.S.—grant toward cost of power line.....	112,800	—
	60,412,800	39,061,042
TRANSPORTATION—		
Financial Assistance for Trunk Highway Systems—		
Province of New Brunswick.....	3,000,000	3,000,000
Province of Newfoundland.....	3,000,000	3,000,000
Province of Nova Scotia.....	3,000,000	1,362,762
Province of Prince Edward Island.....	1,000,000	1,000,000
Financial Assistance for Paving Access Roads to Selected Fishing Ports—		
Province of Prince Edward Island.....	675,000	410,817

Subsection 3.—The Cape Breton Development Corporation

The Cape Breton Development Corporation was created by an Act of Parliament, assented to on July 7, 1967 (SC 1962-63, c. 10), and came into existence by proclamation on Oct. 1, 1967, as a proprietary Crown corporation. The Board was established to promote and assist the financing and development of industry on the Island, to provide employment outside the coal producing industry and broaden the base of the economy of the Island, and to acquire the interests of the major coal producer in the Sydney coalfield and reorganize and operate the mines with a view to the rationalization of coal production therefrom and the progressive withdrawal of the corporation from such production in accordance with progress made in providing other occupations for the employees concerned.

The Act provides for a Board of Directors, comprised of a chairman, a president and five other directors. It reports to Parliament through the Minister of Energy, Mines and Resources. (See also p. 145.)

Subsection 4.—Provincial Government Economic Planning Agencies

In a number of provinces, economic planning agencies have been set up or are in the formative stage. Only those that are currently active are described here.

The Nova Scotia Voluntary Planning Organization

During late 1961 and early 1962, the Government of the Province of Nova Scotia concluded that, within its limitations as a provincial government and in keeping with democratic traditions, it could increase the rate of economic growth by undertaking an economic planning program of a voluntary nature. Legislation creating the Voluntary Planning Board was passed in March 1963 by a unanimous vote of the Legislature. The Act stipulates that the Board shall consist of a chairman and a vice-chairman, the number of additional members and their terms of office to be determined by Order in Council. The Act also provides for the appointment of Sector and Segment Committees chosen from appropriate occupations by the Lieutenant-Governor in Council. A Sector is defined as "a primary portion or division of the economy" and a Segment is "a part or sub-division of a sector".

The general function of the Board is to assist and advise the Minister in the development and implementation of measures to increase the rate of economic growth of the province by means of voluntary economic planning. The specific duties outlined in the Act are to:—

- (a) co-ordinate the plans of the various Sectors of the economy and, based on these plans, produce a plan for the whole economy of the province for recommendation to the Minister as one which the Government might adopt;
- (b) collect, collate and disseminate information relative to the economy of the province;
- (c) advise the Government on provincial economic matters;
- (d) watch the performance of the Sectors in carrying out their plans and stimulate and encourage the carrying out of such plans;
- (e) envisage further plans that should be made and provide for continuity of planning for the future, both short- and long-range; and
- (f) conduct or arrange to be conducted such studies and investigations as the Lieutenant-Governor in Council or the Minister requests.

In addition, the Board serves as a liaison between government and people in all economic endeavours.

The Board in 1966 published a comprehensive over-all plan for the Nova Scotia economy to 1968 which includes the aims of economic planning and objectives for the first planning period. In 1967 it published an annual report and economic review which set out, to the extent possible, an assessment of the economy of the province in relation to the targets which were established in the over-all plan. Detailed Sector plans have been published for agriculture, forestry, tourism, transportation and communications, fisheries,

mining and construction. A special study has been made for the service industries and other studies have been undertaken in conjunction with various Sector plans and the over-all plan.

The Quebec Economic Advisory Council

An Economic Advisory Council was established by the Province of Quebec in 1943 for a three-year term but its mandate was not renewed after that period. In 1960 the Council was revived and under legislation passed by the Quebec Parliament in February 1961 it was replaced by the Quebec Economic Advisory Council (QEAC), the function of which was to prepare a plan for the economic organization of the Province of Quebec with a view to the full utilization of its material and human resources, and to advise the Government of the province, through its own volition or by request, on any economic matter. The Council, on Dec. 1, 1967, consisted of 15 "first" members appointed by the Lieutenant-Governor in Council, including practising lawyers and economists and representatives of financial labour, business, industry and university interests. In addition, there were five "associate" members, selected from among senior government officials, including the Chairman of the Quebec Hydro-Electric Power Commission, the Special Agricultural Adviser to the Executive Council and the Deputy Ministers of the Departments of Natural Resources, Education, and Industry and Commerce. The associate members attend the meetings of the Council and take part in the discussions but do not vote.

It was not possible for the Council to prepare the economic development plan for Quebec, as provided in its terms of reference, without adequate statistical data, planning and research facilities within the Departments and tools for the implementation of the main policies proposed in such a plan. However, owing largely if not exclusively to the existence of the Council and its recommendations, the Quebec Government, between 1961 and 1968, has acquired the tools necessary for responsible planning: Departments have established research and planning branches; studies and reports submitted by committees and workshops have led to a gradual understanding of the broad outlines of Quebec's economic structure; the QEAC, the Departments and various regional planning experiments have contributed to the training of a basic planning staff; co-ordinating bodies have been created; regional planning mechanisms and methods have been developed and tested; an outline of inter-industrial relationships has been drawn up; the territory of the province has been divided into ten administrative regions; and, finally, various instruments for the implementation of government policies have been provided, including the establishment of the General Investment Corporation, the nationalization of electricity, the periodic issue of Quebec Savings Bonds, and the establishment of the Quebec Pension Board, the Quebec Deposit and Investment Fund and the Quebec Mining Exploration Company, etc.

In its present form, the QEAC is considered to be a transitional body in the Quebec planning system. In December 1966, the Quebec Government announced its intention of setting up a planning system better suited to its needs. The QEAC would be replaced by a Planning Board responsible for preparing the Quebec plan, and by a Social and Economic Council which would be the advisory body to the Quebec Government. This would implement, in part at least, a QEAC recommendation that planning and advising should be the responsibility of separate organizations.

The Ontario Economic Council

The Ontario Economic Council was established by Order in Council on Feb. 1, 1962. The Council was conceived as a vehicle where representatives of agriculture, organized labour, commerce and industry, education, finance and of government could pool their knowledge and experience of economic affairs, commission research and formulate policy recommendations to the public and private sectors.

Nineteen Ontario citizens serve as members of the Council. Five of these represent a broad cross-section of business and industry, one each from the financial community and the Consumers' Association of Canada, three come from organized labour, three from

agriculture, and one from the provincial universities. One member comes from the senior ranks of the Ontario Civil Service. The remaining four are drawn from the Ontario Research Foundation, The Ontario Regional Development Council, The Hydro-Electric Power Commission of Ontario, and the Ontario Northland Railway. Each serves as an individual citizen without compensation. The Council meets monthly in Toronto.

Essentially, the Council operates as an advisory body to the Government of Ontario. Some of its findings are reported directly to the government; other reports and recommendations are published and distributed widely. Recent reports cover the fields of land use, education, labour, skill-training and plant location. Also published annually is an index of research projects carried on within provincial government agencies and departments and certain industrial companies operating in Ontario.

The Council shares the view of the Government of Ontario that the economy of Ontario is not an entity separate from Canada. For this reason the Council does not undertake separately for Ontario what the Economic Council of Canada has done and is doing for Canada as a whole. Projects are undertaken with the Economic Council of Canada on a co-operative basis and information is exchanged between the two Councils.

Another way in which the Ontario Economic Council pursues its responsibilities is through the work of committees. A total of some 40 citizens representing a broad cross-section of the Ontario community make up the following committees: Agriculture, Northern Development, Industrial Development, Industrial Research, and Tourist Industry.

A small permanent Council staff undertakes direct assignments and superintends the design and administration of projects assigned to others. Close contact with government departments avoids unnecessary duplication of effort. Research facilities, academic personnel and graduate students in Ontario universities have been used for certain projects which have included the professional services of members of the departments of economics, political science, geography and business administration in the Universities of Windsor, Western Ontario, Toronto, Waterloo, Queen's, York and Lakehead. From time to time the Council engages the professional services of private consulting firms.

The Manitoba Economic Consultative Board

The Manitoba Economic Consultative Board was established under the provisions of the Development Authority Act, 1963, and has been operative since the autumn of that year. It is composed of a chairman and ten members appointed by the Lieutenant-Governor in Council and is representative of the leading elements of the labour and business community. Chairmen of the Manitoba Design Institute, the Manitoba Research Council and the Manitoba Export Corporation serve in an *ex officio* capacity. The Board obtains its funds from the Manitoba Government; its budget in 1966-67 was about \$130,000.

The Board was established as an advisory body to the Manitoba Development Authority, the economic planning and co-ordinating committee of the Executive Council. It is charged with examining Manitoba's long-term prospects for growth, a report on which is published annually and widely distributed. Its staff is involved in a continuing program of research into manpower requirements and long-term economic problems.

Consultation with government, management, agriculture and labour on obstacles to more rapid growth is an integral part of the Board's task. Thus, working with various management groups in the province, the provision of adequate management education programs was examined recently. This led to the formation of the Manitoba Institute of Management Inc., a non-profit private corporation representative of management, educators, labour and government, to provide broad community support for a greatly strengthened program of management education in the province.

Whenever possible the Board co-operates with other provincial councils and with the Economic Council of Canada. During the summer of 1967 the Board, in co-operation with the Dominion Bureau of Statistics, sponsored a national seminar on input/output analysis.

PART I.—BANKING AND OTHER COMMERCIAL FINANCE

Section 1.—Banking

Subsection 1.—The Bank of Canada*

Canada's central bank, the Bank of Canada, began operations on Mar. 11, 1935, under the terms of the Bank of Canada Act of 1934 which charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it specific powers for discharging this responsibility. Through the exercise of these powers, the Bank broadly determines the combined total of the most common forms of Canadian money held by the community, chartered bank deposits and currency. The 1967 revision of the Bank of Canada Act contained a number of technical amendments designed to assist the Bank in discharging its responsibilities and account is taken of these changes in the following description of the Bank's operations.

The provisions of the Bank of Canada Act enable the central bank to determine the total amount of cash reserves available to the chartered banks as a group and thus to control the rate of expansion of the total assets and deposit liabilities of the banking system as a whole. The Bank Act, which regulates the operation of the chartered banks, requires that each chartered bank maintain a stipulated minimum average amount of cash reserves,

* Revised by the Research Department of the Bank of Canada.

calculated as a percentage of its Canadian dollar deposit liabilities, in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. (The minimum cash reserve requirement, which came into effect under the new legislation beginning Feb. 1, 1968, is 12 p.c. of demand deposits and 4 p.c. of other deposits.) The ability of the chartered banks as a group to expand their total assets and deposit liabilities is therefore limited by the total amount of cash reserves available. An increase in cash reserves will encourage the banks as a group to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in their deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

The chief method by which the Bank of Canada alters the level of cash reserves of the chartered banks, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in the cash reserves of the chartered banks and requires them to reduce their holdings of assets and deposit liabilities.

The influence that the Bank of Canada exerts on credit conditions (i.e., on the interest cost and other terms of borrowing in financial markets) stems from its ability to limit the growth of bank credit and of the community's holdings of bank deposits and currency. The growth rate of the banking system is one of the factors exerting an important influence on the level of interest rates and other terms of access to credit prevailing in financial markets generally. Current credit conditions (and expectations about future trends in such conditions) in turn have an influence on business and household decisions to spend or to save. Many other factors also have an important effect on spending decisions, however, and the behaviour of the economy is subject as well to such influences as economic and financial developments abroad; the investment, price and wage policies of business firms in Canada; and the character of public policies at all levels of government with regard to expenditure and taxation. In using the powers at its disposal, the Bank attempts to help bring about credit conditions appropriate to both domestic and external conditions. Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing prospects for the economy as reflected in the complex pattern of economic and financial developments.

In a technical sense, the powers which the central bank possesses allow it to exert a strong influence over economic activity but, in practice, the range through which credit conditions can be permitted to vary is necessarily limited. Changes in credit conditions in Canada affect the position of some groups in the economy much more than that of others, and this uneven impact is bound to inhibit the central bank's operations. Furthermore, interest rates in Canada cannot change greatly in relation to those abroad without producing large capital movements which might complicate Canada's international payments position. These considerations suggest that monetary policy must be used in appropriate combination with other public economic policies in order to help achieve national economic goals.

Although the Bank of Canada has the power to determine the rate of growth of the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. This depends entirely on the preferences of the public, since bank deposits can be converted freely into notes and coin and back again.

Although the cash reserve system in Canada—which is similar to that in a number of other countries—enables the central bank to determine within broad limits the total amount of chartered bank assets and deposit liabilities, the Bank of Canada leaves the allocation of bank and other forms of credit to the private sector of the economy. Each

chartered bank is free to attempt to gain as large a share as possible of the total cash reserves available by competing for deposits and to decide what proportion of its funds to invest in particular kinds of securities and in loans to particular types of borrowers. The influence of the central bank—based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securities—is both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are contained in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938, 1954 and 1967. Some of these powers are outlined below.

The Bank may buy or sell securities issued or guaranteed by Canada or any province, short-term securities issued by Britain, treasury bills or other obligations of the United States and certain types of short-term commercial paper. The Industrial Development Bank Act authorizes the Bank to purchase securities issued by that institution. The Bank may buy or sell gold, silver, nickel and bronze coin, or any other coin, and gold and silver bullion as well as foreign exchange and may accept non-interest-bearing deposits from the Government of Canada, the government of any province, any chartered bank and any bank regulated by the Quebec Savings Bank Act. The Bank may open accounts in other central banks. It may accept deposits from other central banks, the International Monetary Fund, the International Bank for Reconstruction and Development, and any other official international financial organization, and it may pay interest on such deposits. The Bank does not accept deposits from individuals nor does it compete with the chartered banks in the commercial banking field. The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada. The sole right to issue paper money for circulation in Canada is vested in the Bank.

The Bank of Canada may require the chartered banks to maintain, in addition to the legal minimum cash reserve requirement mentioned above, a secondary reserve which the Bank may vary within certain limits. The secondary reserve, which consists of cash reserves in excess of the minimum requirement, treasury bills and day-to-day loans to investment dealers, cannot be more than 6 p.c. of total deposits when first introduced nor can it exceed 12 p.c. In the event the Bank wishes to introduce or increase the secondary reserve requirement, one month's notice to the chartered banks is required; the amount of any increase in the requirement cannot exceed 1 p.c. per month. In the case of a lowering of the secondary reserve requirement, however, the percentage change in any one month is not restricted.

The Bank of Canada may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge of certain classes of securities. Loans or advances may be made under certain conditions and for limited periods to the Government of Canada or of any province. The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. From Nov. 1, 1956 until June 24, 1962, the Bank Rate was established weekly at a fixed margin of $\frac{1}{4}$ of 1 p.c. above the latest weekly average tender rate for 91-day treasury bills. Since June 24, 1962, the Bank Rate has been fixed from time to time as follows:—

<i>Date of Change</i>	<i>Per Cent per Annum</i>	<i>Date of Change</i>	<i>Per Cent per Annum</i>
June 24, 1962.....	6.00	Dec. 6, 1965.....	4.75
Sept. 7, 1962.....	5.50	Nov. 14, 1966.....	5.25
Oct. 12, 1962.....	5.00	Jan. 30, 1967.....	5.00
Nov. 13, 1962.....	4.00	Apr. 7, 1967.....	4.50
May 6, 1963.....	3.50	Sept. 27, 1967.....	5.00
Aug. 12, 1963.....	4.00	Nov. 20, 1967.....	6.00
Nov. 24, 1964.....	4.25	Jan. 22, 1968.....	7.00

Since June 24, 1962, the Money Market Rate—the rate at which the Bank of Canada is prepared to enter into purchase and resale agreements with money-market dealers—has been either $\frac{1}{4}$ of 1 p.c. above the average rate on 91-day treasury bills at the preceding weekly tender or the Bank Rate, whichever is lower.

The Bank of Canada is not required to maintain gold or foreign exchange reserves against its liabilities.

Prior to the 1967 amendment of the Bank of Canada Act, there existed some uncertainty about the exact relationship between the central bank and the Government. The changes in the Bank of Canada Act in 1967 were designed to clarify this matter. They provide for regular consultation between the Governor of the Bank and the Minister of Finance as well as for a formal procedure whereby, in the event of a disagreement between the Government and the Bank which cannot be resolved, the Government may, after further consultation has taken place, issue a directive to the Bank as to the monetary policy that it is to follow. Any such directive must be in writing, it must be in specific terms, and it must be applicable for a specified period. It must be published immediately in the *Canada Gazette* and tabled in Parliament. The amendment makes it clear that the Government must take the ultimate responsibility for monetary policy and it provides a mechanism for that purpose but the central bank is in no way relieved of its responsibility for monetary policy and its execution.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, two Directors and the Deputy Minister of Finance (who is without a vote); this Committee has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown.

The Industrial Development Bank.—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

“To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.”

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada and the Deputy Ministers of Trade and Commerce and Industry. The authorized capital of the Bank is \$75,000,000 and it may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed ten times the aggregate of the Bank's paid-up capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada which, by definition in the Act, include any industry, trade or other business undertaking of any kind. With respect to such enterprises the Bank is empowered to lend money or guarantee loans and where an enterprise is a corporation the Bank may also enter into underwriting agreements with regard to any issue of stock, bonds or debentures; acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement; and acquire certificates issued by a trustee to finance the purchase of transportation equipment. The total amount of commitments of the Bank, in the form of loans, guarantees, etc., in excess of \$200,000 each, may not exceed \$200,000,000.

The Bank may accept any form of collateral security against its advances, including realty and chattel mortgages which constitute the usual kind of security taken. The Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of Incorporation provides that it should extend credit only when, in the Bank's opinion, credit or other financial resources would not otherwise be available on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has branch offices in the following cities: St. John's, Halifax, Saint John, Moncton, Rimouski, Quebec, Trois-Rivières, Montreal,

Sherbrooke, Ottawa, Toronto, Hamilton, Waterloo, London, Windsor, Sudbury, Port Arthur, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Kelowna, Vancouver, Victoria and Prince George.

¹ Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

Subsection 2.—Currency

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves. The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

Coinage.*—Under an amendment to the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), which was submitted to Parliament in 1967, gold coins may be issued in the denomination of twenty dollars (nine tenths fine or millesimal fineness 900); subsidiary coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (five tenths fine or millesimal fineness 500, or pure nickel); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in the event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency, Mint and Exchange Fund Act for the payment of any amount; in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

* Revised by the Master of the Royal Canadian Mint, Ottawa.

¹ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

*The Royal Canadian Mint.**—The Ottawa Mint, established as a branch of the Royal Mint under the (Imperial) Coinage Act of 1870, was opened on Jan. 2, 1908. On Dec. 1, 1931, it became the Royal Canadian Mint and now operates as a branch of the Department of Finance.

The principal functions of the Mint are the execution of domestic and foreign coin; the refining of gold and silver; the acquisition of gold, silver and other metals, payments for which are made on the basis of Mint assays; the control, preparation and movement of gold and coin shipments; the safeguarding of Mint holdings of monetary metals, including coin and precious metals in various processing stages until finished and issued; the fabrication and engraving of dies for coinage, medals, signatures and official seals; the issue of coin sets to numismatists and the administration of various regulations issued under the terms and provisions of the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315).

Subsection 3.—The Chartered Banks

Canada's commercial banking system consists of nine privately owned banks. Eight have been in operation for many years and one was granted a charter in 1967.* At the end of December 1967, these banks operated 5,879 banking offices in Canada and 179 abroad. Canadian chartered banks engage in a very wide range of activities; they accept various types of deposits from the public including accounts payable on demand, both chequing and non-chequing, notice deposits and fixed-term deposits. The banks, in addition to holding a portfolio of securities, make loans under a wide variety of conditions for commercial, industrial, agricultural and consumer purposes. They also deal in foreign exchange, receive and pay out bank notes, provide safekeeping facilities and perform a variety of other services. For the most part, these operations are carried out in Canada by the extensive network of bank branches. The head offices of the banks confine their activities largely to general administration and policy-making functions, the management of the banks' investment portfolio and related matters. A detailed account of the branch banking system in Canada is given in the 1967 Year Book, pp. 1126-1128.

All banks operating in Canada are chartered (i.e., licensed) by Parliament under the terms of the Bank Act. The Act regulates certain internal aspects of bank operations such as the auditing of accounts, the issuing of stock, the setting aside of reserves and similar matters. In addition, the Bank Act regulates the banks' relationship with the public, the Government and the Bank of Canada.

It has been the practice in Canada to revise the Bank Act at approximately ten-year intervals. The most recent revision was enacted by Parliament early in 1967 and came into effect on May 1 of that year. The remainder of this subsection deals with the principal changes incorporated in the new Bank Act.

Acceptance by the Government of some of the main recommendations of the Royal Commission on Banking and Finance for increased competition and flexibility in the Canadian banking system was reflected in various new Bank Act provisions. These imposed certain restrictions on corporate and other relationships between banks and other financial

* The Bank of British Columbia was granted a charter by Parliament in December 1966 but as of Feb. 29, 1968 had not commenced operation.

institutions, while removing certain existing restrictions on the banks' operations which had placed them at some competitive disadvantage in recent years compared with their principal financial competitors.

In the past, various forms of intercorporate financial relationship between chartered banks and other financial enterprises had developed in Canada. In some instances this involved investment by banks in the shares of these enterprises, and vice versa; in others the relationship involved interlocking directorships. These practices are severely restricted under the terms of the new Bank Act, which limits bank ownership of any Canadian corporation to 10 p.c. of the voting shares and also provides that no more than one fifth of the directors of any company may become directors of a bank. In addition, after a two-year period a director of a trust or mortgage loan company which accepts deposits from the public may not be appointed or elected a director of a bank. In order to ensure that competition is not curtailed by agreements among the banks on interest rates to be paid on deposits or charged for loans, the new Bank Act prohibits the making of such agreements (except with the consent of the Minister of Finance). At the same time the provision that was formerly in the Bank Act limiting to 6 p.c. the interest rate which chartered banks could charge on loans, was abolished effective Jan. 1, 1968. Under the new Bank Act, the determination of interest rates on loans and deposits is left to market forces.

The new Bank Act also granted the banks new mortgage-lending powers. Banks may now charge current rates of interest on mortgage loans under the National Housing Act, and they may also make conventional residential mortgage loans for the first time. In the case of conventional residential mortgages, the amount of an individual mortgage cannot exceed 75 p.c. of the appraised value of the property. After 1973 the maximum amount of a bank's assets to be held in the form of conventional residential mortgages must not be more than 10 p.c. of the bank's Canadian dollar deposit liabilities plus debentures. In the interval, the percentage limitation will rise by 1 p.c. each fiscal year; it is 4 p.c. until Oct. 31, 1968 when it rises to 5 p.c. for the subsequent fiscal year and so on until the 10-p.c. maximum is reached.

The banks have also been given authority to issue their own debentures with an original term to maturity of at least five years; such securities are not subject to a reserve requirement and rank in priority after deposit liabilities. The amount of debentures that any bank may have outstanding is limited by restricting the increase per annum to 10 p.c. of the paid-up capital and rest fund and an upper limit of one half of the bank's paid-up capital and rest fund.

The amendments to the Bank Act in 1967 contained a number of revisions respecting the ownership of Canadian chartered banks. No individual or associated shareholders may vote more than 10 p.c. of a bank's total shares outstanding and, if more than 25 p.c. of a bank's shares are owned by non-residents, the total outstanding liabilities of the bank may not exceed twenty times its authorized capital stock.

The Bank Act also stipulates the minimum statutory cash reserve requirement that the chartered banks must observe. The minimum amount of Bank of Canada notes and deposits each bank must hold as cash reserves was changed in a series of monthly steps from 8 p.c. of all Canadian dollar deposits under the old Bank Act to 12 p.c. of demand deposits and 4 p.c. of other deposits as of February 1968. In addition, the Bank of Canada has been given stand-by powers to require the banks to hold a "secondary reserve" which would consist of cash in excess of their statutory requirements, holdings of treasury bills and day-to-day loans to investment dealers. When initially introduced, this secondary reserve cannot exceed 6 p.c. of a bank's deposit liabilities. Thereafter it may be increased in monthly steps of 1 p.c. to a maximum of 12 p.c. The Bank of Canada may reduce or remove such a secondary reserve at any time; effective April 1968, the required level was 7 p.c.

Branches of Chartered Banks.—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of

branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—The Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amalgamation in 1955 of the Bank of Toronto and the Dominion Bank as The Toronto-Dominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 have reduced this number to eight. The Bank of British Columbia was granted a charter by Parliament in December 1966, increasing the number of chartered banks to nine.* The number of branches of chartered banks in each province periodically from 1902 to 1967 is given in Table 8.

* See footnote *, p. 1119.

Financial Statistics of the Chartered Banks.—The classification of chartered bank assets and liabilities was revised by the Bank of Canada Act, 1954, so that the statistical series given in Tables 11–15 begins with that year. Assets and liabilities are given in less detail for 1954–61 in the 1965 Year Book, p. 1043 and corresponding figures to those in Table 11 for 1962 and 1963 in the 1966 edition, p. 1066; month-end data are available from Dec. 31, 1954 to date in the Bank of Canada *Statistical Summary*.

11.—Statement of Chartered Bank Assets and Liabilities, as at Dec. 31, 1965–67

NOTE.—As a result of the 1967 amendments to the Bank Act, certain changes were made in the categories of assets and liabilities reported by the banks. Beginning in 1967, Government of Canada security holdings are classified as maturing within three or after three years rather than two years as in the past. In addition, three new liability items were added—Advances from Bank of Canada, Accumulated appropriations for losses, and Debentures issued and outstanding. For details, see the Bank of Canada *Statistical Summary*.

Assets and Liabilities	1965	1966	1967

¹ See headnote.**12.—Canadian Cash Reserves, 1958-67**

NOTE.—Bank of Canada deposits are averages of the juridical days in the month shown; Bank of Canada notes and Canadian dollar deposits are averages of the four consecutive Wednesdays ending with the second last Wednesday in the previous month. Until June 1967 the required cash reserve ratio was 8 p.c. on both demand and notice deposits. For the next eight months the required minimum monthly average on demand deposits was increased by $\frac{1}{4}$ of 1 p.c. per month and that on notice deposits was decreased by $\frac{1}{4}$ of 1 p.c. Since February 1968 the required ratios have been 12 p.c. for demand deposits and 4 p.c. for notice deposits as prescribed under the Bank Act.

(Millions of dollars)

¹ Excluding realized profits and losses on securities held in investment account which are included in the item "Loss experience not included in other operating expenses". ² Includes provision for losses based on five-year average loss experience which in 1967 amounted to \$32,200,000 or 0.19 p.c. of related loans, and also includes taxes other than income taxes. ³ Before provision for income taxes and appropriations for losses other than those included in "Other operating expenses". ⁴ General and tax-paid appropriations for losses; net after any transfers out of accumulated appropriations for losses to undivided profits or rest account.

Cheque Payments.—A monthly record of the amount of cheques charged to customers' accounts at all chartered bank offices in 35 major clearing-house centres of Canada is available from 1924. Except for a minor setback in 1938, the value of cheques cashed shows a continuously upward trend from 1932, the low point of the depression. The value of cheques cashed in 35 clearing centres during 1966 amounted to a high of \$521,597,914,000, an increase of 9.5 p.c. over 1965. All five economic areas contributed to the increase, payments in the Atlantic Provinces rising 20.1 p.c., in British Columbia 13.1 p.c., in Quebec 11.9 p.c., in the Prairie Provinces 10.7 p.c. and in Ontario 6.6 p.c. Payments in the two leading centres reached all-time highs, Montreal advancing 12.3 p.c. and Toronto 5.7 p.c. over the previous year.

Subsection 4.—Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec—the Montreal City and District Savings Bank and La Banque d'Économie de Québec—established under federal legislation and reporting monthly to the federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

Post Office Savings Bank.—The Post Office Savings Bank was established under the Post Office Act of 1867 (SC 1867, c. 10) to “enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon”. Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1964-67 follow.

Item	1964	1965	1966	1967
	\$	\$	\$	\$
Deposits and interest.....	5,422,181	4,862,529	4,542,467	4,504,183

Withdrawals.....	6,697,740	6,212,491	5,773,495	5,772,450
Balance on deposit.....	24,604,919	23,254,957	22,023,929	20,755,662

Provincial Government Savings Institutions.—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta.

Ontario.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of $4\frac{1}{2}$ p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits as of Mar. 31, 1967 were \$83,400,000 and the number of depositors was approximately 90,500; 21 branches are in operation throughout the province.

Alberta.—Savings deposits are accepted at 65 Province of Alberta Treasury Branches throughout the province. The total of these deposits at Mar. 31, 1967 was \$99,568,548, of which \$56,793,985 was payable on demand bearing interest at $3\frac{1}{2}$ p.c. per annum, \$20,985,031 was in term savings for terms of one to five years bearing interest at 4 p.c. to $5\frac{1}{2}$ p.c. per annum depending on the term, and \$21,789,532 was in term deposit receipts for terms of from 30 days to 365 days bearing interest at rates comparable to those paid on the open market.

Quebec Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Oct. 31, 1967, a paid-up capital and reserve of \$17,500,000, savings deposits of \$402,384,825, and total liabilities of \$436,146,451. Total assets amounted to \$436,146,451, including \$116,788,742 of federal, provincial, municipal and other securities.

La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, had, at Oct. 31, 1967, savings deposits of \$59,035,788 and a paid-up capital and reserve of \$3,500,000. Total liabilities amounted to \$65,575,821 and total assets to a like amount.

Credit Unions.—Credit unions are savings and loan associations organized and operated on a co-operative basis by people having a common bond of association such as a parish, club, lodge or labour union, that of employment in a plant, industry or department, or residence in a rural or well-defined urban community. The number of chartered credit unions in Canada at the end of 1965 was 4,939 of which 4,364 reported a total membership of 3,700,000 and assets of \$2,500,000,000. Quebec, with 2,000,000 members and assets of \$1,400,000,000, accounted for 55 p.c. of both total membership and total assets of all credit unions in Canada. Credit unions classified by bond of association on a percentage basis were: occupational 35, rural 33, urban 17 and other 15.

Canadian credit unions in the 1956-65 decade have continued the steady growth generally in evidence since credit unions were first organized in Quebec in the early part of the present century. Loans granted by credit unions increased by 17 p.c. in 1965 to reach \$1,078,000,000, passing the \$1,000,000,000-mark for the first time and being a 248-p.c. increase over the corresponding figure of \$310,000,000 in 1956. Assets at \$2,500,000,000 increased by 234 p.c. and savings at \$2,300,000,000 increased by 225 p.c. in the same comparison. Membership of 3,700,000 represented 18.6 p.c. of the total population, compared with 1,900,000 and 11.6 p.c., respectively, in 1956.

There were 28 central credit unions in 1965; these unions act as credit unions for the credit unions, mainly by accepting deposits of surplus funds from them and providing a source of funds for them to borrow when they cannot meet the demand for local loans. Most of the centrals also admit co-operatives as members. Total assets of the centrals increased 18 p.c. to \$357,000,000 and loans to members increased 43 p.c. to \$221,000,000 over the previous year. The Canadian Co-operative Credit Society serves as a central credit union for the provincial centrals and large co-operatives all across Canada. In 1965, membership consisted of four provincial centrals, four commercial co-operatives and two co-operative insurance companies.

Section 2.—Other Commercial Finance**Subsection 1.—Trust and Mortgage Loan Companies**

Trust and mortgage loan companies are registered with either the federal or provincial governments. They operate under the Loan and Trust Companies Acts (RSC 1952, c. 170 as amended in 1953, 1958, 1961 and 1964-65 and RSC 1952, c. 272 as amended in 1953, 1958, 1961 and 1964-65, respectively) or under corresponding provincial legislation.

The first mortgage loan companies were established in Ontario in the 1840s as co-operative associations to provide mortgage finance for their members. These associations evolved under legislation which was amended to give them permanent corporate status as mortgage-lending institutions. They obtained their funds principally by selling medium- and long-term debentures to the public but also had the power to open deposit accounts. Trust companies were first incorporated in Ontario in the 1880s. Although the trust company legislation prevented them from borrowing funds, they had the power to accept funds in guaranteed trust accounts and invest them in specified types of assets. This feature of trust company legislation is now general throughout Canada. The trust companies operate as financial intermediaries in the same way as mortgage loan companies,

chartered banks or savings and other financial institutions and are the only corporations in Canada with power to act as trustees for property interests and to conduct other fiduciary business. In this capacity they act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stock and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcies.

Trust and mortgage loan companies were established and grew rapidly under provincial legislation in the late nineteenth and early twentieth centuries. Some companies were chartered by special Acts of Parliament but it was not until 1914 that federal legislation was passed and the Federal Government began to regulate trust and loan companies registered under its Acts. There are now nine federal trust companies and 13 federal loan companies. The Superintendent of Insurance examines these companies and also, by arrangement with the provinces, trust and loan companies incorporated in Nova Scotia and trust companies incorporated in New Brunswick and Manitoba. Companies must be licensed by each province in which they wish to operate.

Although there are many differences among the various federal and provincial Acts, the broad lines of the legislation are common. In their intermediary business the companies have the powers mentioned above to borrow or, in the case of trust companies, accept funds in guaranteed accounts subject to maximum permitted ratios of these funds to shareholders' equity. The funds may be invested in specified assets which include first mortgages on real property, government securities and the bonds and equity of corporations having established earnings records and the companies may grant loans on the security of such bonds and stocks. Trust and loan companies are not required to hold specified cash reserves, as are the chartered and savings banks, but there are broadly defined "liquid asset" requirements in a number of the Acts.

The trust and mortgage loan companies have been substantial members of the Canadian financial system since their early years. In the 1920s they held about one half of the private mortgage business in Canada but their growth rate fell off sharply because of the impact of the depression of the 1930s and World War II on the mortgage business. In the years since the War the re-emergence of strong demands for mortgage financing and the willingness of many trust and loan companies to compete aggressively for funds have led to sustained rapid expansion.

According to DBS figures, mortgage loan companies had assets before investment in subsidiaries of \$2,567,000,000 at the end of 1967 compared with \$2,375,000,000 a year earlier. Their holdings of mortgages amounted to \$2,067,000,000 or 81 p.c. of total assets. To finance their investments, these companies had borrowed \$1,653,000,000 or 64 p.c. of their total funds by the sale of debentures and \$395,000,000 from deposit accounts.

At the end of 1967, company and guaranteed funds of trust companies in the DBS survey were \$4,349,000,000 compared with \$3,924,000,000 a year earlier, an increase of 11 p.c. Trust companies, while not specializing in mortgage financing to the same extent as loan companies, in recent years have been putting a high proportion of their funds into these investments with the result that mortgages were 55 p.c. of their assets at the end of 1967 compared with 45 p.c. five years earlier. The trust companies had \$2,739,000,000 of term certificates outstanding and \$1,162,000,000 deposit accounts in December 1967, accounting for 90 p.c. of total funds. About one half of the demand or savings deposits were in chequable accounts. There is considerable variety among the trust companies and a few have developed a substantial short-term business, raising funds by issuing certificates for terms as short as thirty days and also operating as lenders in the money market. Nevertheless, it remains true that the main business of the trust companies in

their intermediary role, as of the mortgage loan companies, is to channel savings into mortgages and other long-term investments. In addition, trust companies, as of Dec. 31, 1966, had \$13,487,000,000 under administration in estate, trust and agency accounts.

More complete and up-to-date financial information may be found in quarterly balance sheet statements published by the DBS and the Bank of Canada, the reports of the Superintendent of Insurance on Loan and Trust Companies and the reports of provincial supervisory authorities.

¹ The increase over the previous year is caused by changes in inter-company accounts of affiliated companies.² Prior to 1966, total assets exclude dividends, accrued interest and other receivables; these receivables are netted against the combined liability items, interest, dividends and other payables and retained earnings.**Subsection 2.—Licensed Small Loans Companies and Licensed Money-Lenders***

Small loans companies and money-lenders are subject to the Small Loans Act (RSC 1952, c. 251, as amended by SC 1956, c. 46). This Act, first passed in 1939, sets maximum charges on personal cash loans not in excess of \$1,500 and is administered by the Department of Insurance. Lenders not licensed under the Act may not charge more than 1 p.c.

* Prepared by the Research Department of the Bank of Canada in co-operation with the Superintendent of Insurance for Canada.

per month. Those wishing to make small loans at higher rates must be licensed each year by the Minister of Finance under the Small Loans Act. The Act allows maximum rates, including charges of every kind, of 2 p.c. per month on unpaid balances not exceeding \$300, 1 p.c. per month on the portion of unpaid balances exceeding \$300 but not exceeding \$1,000 and one half of 1 p.c. on any remainder of the balance exceeding \$1,000. Loans in excess of \$1,500 are not regulated and lenders operating entirely above this limit and the larger loans of licensed lenders are thus exempt from the Act. Nor does the Act regulate charges for the instalment financing of sales. Prior to Jan. 1, 1957, the Act applied only to loans of \$500 or less and the maximum rate was 2 p.c. per month.

At the end of 1966, there were five small loans companies and 78 money-lenders licensed under the Act. Small loans companies are incorporated by special Acts of the Parliament of Canada, the first of them commencing business in 1928; the money-lenders include provincially incorporated companies and a few partnerships and individuals. Many of the small loans companies and money-lenders are affiliated with other financial institutions, principally Canadian sales finance companies and American finance or loan companies, and these subsidiary companies account for a high proportion of the total business of licensed lenders. The affiliations with sales finance companies reflect the close relationship between instalment financing and the consumer loan business. The Dominion Bureau of Statistics publishes quarterly balance sheets for sales finance and consumer loan companies as a whole and does not attempt to distinguish the two groups within the industry.*

The subsidiary small loans companies and money-lenders obtain most of their funds through their parent companies. A few of the larger companies have supplemented their bank loans by selling short-term paper in the market but the amount has been small compared with the short-term market borrowing of the sales finance companies. The smaller independent companies rely mainly on their shareholders and on borrowing from the chartered banks.

The annual figures of assets and liabilities given in Table 21 for 1963-66 are from the Department of Insurance report.*

* See *Business Financial Statistics* (Catalogue No. 61-006). More complete data on the business of licensed lenders are given in the *Report of the Superintendent of Insurance for Canada on Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1966 (Catalogue No. In 3-4/1965).

There was a decrease in 1966 compared with 1965 in the amount of business done by the combined companies. Small loans made to the public during the year numbered 1,493,212 as against 1,556,294 in 1965, a drop of about 4 p.c.; the amount of such loans decreased from \$904,651,318 to \$873,508,887 in the same comparison, also about 4 p.c. The average small loan made was about \$585 in 1966 and \$581 in 1965. At the end of the year, small loans outstanding numbered 1,287,748 for an amount of \$647,887,121, or an average of \$503 per loan; comparable figures for 1965 were 1,245,921, \$627,526,360 and \$504, respectively.

Gross profits of small loans companies and money-lenders before income taxes and before taking into account any increase or decrease in reserves for bad debts increased from \$27,521,974 in 1965 (\$16,633,701 being the profit on small loans and \$10,888,273 the profit on business other than small loans) to \$32,695,170 in 1966 (\$17,588,584 being the profit on small loans and \$15,106,586 the profit on business other than small loans).

Subsection 3.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870, was defined as 15/73 of the British gold sovereign.* That is, the par rate of exchange between the dollar and the pound sterling was fixed at \$4.866, making the Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under \$2 per thousand.

On the outbreak of World War I, Canada and Britain suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at \$4.76 in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of Britain, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919, the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as \$3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From

* The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until Britain abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933 both currencies had reached a premium in New York. Meanwhile, in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at \$35 per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, Britain and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of \$4.02½ and \$4.03½, respectively, in terms of the United States dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control† in Canada and established fixed buying and selling rates of \$1.10 to \$1.11 for the U.S. dollar and \$4.43 to \$4.47 for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of \$1.00 to \$1.00½ and for sterling \$4.02 to \$4.04. These rates continued in effect until Sept. 19, 1949 when, following a 30.5-p.c. reduction by Britain in the value of sterling to \$2.80 U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at \$3.07¼ and \$3.08¼ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2, and that the rate would henceforth be determined in the market for foreign exchange. This policy was carried out within the framework of exchange control until Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked by the Governor in Council, terminating the period of exchange control that had prevailed in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. On May 2, 1962, the Minister of Finance announced that the Canadian dollar was being stabilized at a fixed par value of 92½ cents in terms of United States currency. This action was taken with the concurrence of the International Monetary Fund and, in accordance with the Articles of Agreement of that organization, the Government of Canada undertook to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of the established par value. The movements of the U.S. dollar in Canadian funds from January 1958 to December 1967 are shown in Table 22.

*Noon quotations. Daily highs and lows may have exceeded these rates.

† The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

¹ On Oct. 1, 1959, \$62,500,000 representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund.

² Includes the proceeds of a drawing equivalent to U.S. \$300,000,000 which was made from the International Monetary Fund in June 1962 and which was outstanding at year-end. The amount of Canada's net obligation to the International Monetary Fund was \$275,700,000 at Dec. 31, 1962 and \$196,000,000 at Dec. 31, 1963.

³ Canada's net creditor position with the International Monetary Fund was \$60,000,000 at Dec. 31, 1964, \$215,900,000 at Dec. 31, 1965, \$263,500,000 at Dec. 31, 1966 and \$248,300,000 at Dec. 31, 1967.

Subsection 4.—The Bond Market*

Sales of Canadian Bonds.—Canadian borrowers, both government and corporate, raised a total of \$3,326,000,000 on the bond market in 1966, well above the \$1,976,000,000 raised in 1965. Although total savings were up in the later year, capital expenditures were up even more and the resulting demands for funds put heavy pressures on the financial markets. In contrast with 1965, when the Federal Government had net retirements of bonds, a total of \$430,000,000 was issued in 1966. As in previous years, the bulk of the net new issues were in the form of non-marketable bonds, mainly Canada Savings Bonds.

The Canada Pension Plan and the Quebec Pension Plan provided the provinces with a new substantial source of funds in 1966. During the year, the Canada Pension Plan purchased \$462,000,000 of special provincial bonds and the Quebec Pension Plan took in \$183,000,000, most of which was used for the purchase of provincial and municipal bonds. Sales of provincial government bonds, including sales to the Pension Plans, were twice as large in 1966 as in 1965.

Municipal government borrowing through the bond market was higher than in 1965 but about the same as the average for the previous five years. A substantial amount of money—almost \$100,000,000—was borrowed from the chartered banks.

* Prepared (February 1968) by the Co-ordinator, Financial Statistics, Dominion Bureau of Statistics, using data published by the Bank of Canada and data from the Budget Papers, June 1, 1967.

Investment outlays made by businesses in 1966 greatly exceeded their savings through retained income and depreciation. Net bond issues were \$908,000,000, which was higher than in any previous year except 1965. It is probable that bond issues would have been even larger had it not been for the scarcity and high price of funds. Interest rates on long-term bonds rose from 6.05 p.c. in December 1965 to 6.83 p.c. in December 1966. Issues of finance company paper and other short-term commercial paper totalled \$120,000,000 compared with a net retirement of \$282,000,000 in 1965, when the short-term money market was disturbed by the imposition of United States guidelines and the Atlantic Acceptance Corporation default on its obligations. Bank loans to business were up by about \$400,000,000 in 1966 and direct investment increased by \$660,000,000.

Bonds Outstanding.—Total government and business bonds outstanding at the end of 1966 amounted to \$51,686,000,000, an increase of 6 p.c. over 1965 and of 18 p.c. since 1963. In the 1963-66 period, the largest increase was one of 33 p.c. in corporate bonds outstanding, followed closely by an increase of 31 p.c. in provincial bonds. The total of outstanding bonds includes treasury bills, finance company paper and other short-term commercial paper; it does not include the term deposits, certificates and debentures of trust and mortgage loan companies, which amounted to almost \$4,000,000,000 at the end of 1966, nor does it include mortgage debt, which was estimated by Central Mortgage and Housing Corporation at over \$20,000,000,000 at the end of 1965.

24.—Net New Issues of Canadian Bonds, 1962-66, and Bonds Outstanding as at Dec. 31, 1962-66

NOTE.—Federal, provincial and municipal bonds include direct and guaranteed issues; corporation bonds include finance company and other short-term commercial paper; "other bonds" include bonds of religious and other institutions and a small amount of foreign bonds payable in Canadian dollars.

Distribution of Bond Holdings.—Table 25 shows the estimated distribution as at Dec. 31, 1966 of government and corporate bonds among the major purchasers of securities. Governments and the financial institutions specified in the table held one half of the total; of the remainder, non-residents held 20 p.c. and all other residents held 30 p.c. Of the 30 p.c., however, 12 p.c. was made up of holdings by persons of Canada Savings Bonds. The largest identified holders of bonds were chartered banks with 10 p.c. of the total, life insurance companies with 9 p.c. and trustee pension plans with 8 p.c.

25.—Estimated Distribution of Bond Holdings, as at Dec. 31, 1966

NOTE.—Federal, provincial and municipal bonds include direct and guaranteed issues; corporation bonds include finance company and other short-term commercial paper; "other bonds" include bonds of religious and other institutions and a small amount of foreign bonds payable in Canadian dollars.

PART II.—INSURANCE*

Section 1.—Life Insurance

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to \$76,824,000,000 at the end of 1966, an increase of \$7,168,000,000 during the year. The ratio of gain in business in force, expressed as a percentage of the amount in force at the beginning of the same year, was 10.3 p.c. in 1966.

Year	In Force at Beginning of Year	Increase in Force for the Year	Per- centage Gain
	\$'000,000	\$'000,000	
1930.....	6,157	335	5.4

Subsection 2.—Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since 1955.

The operations analysed in the tables of this Subsection, with the exception of Table 6, include only those of companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for over 92 p.c. of the life insurance in force in Canada.

2.—Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1960 and Annually 1961-66

NOTE.—Figures for 1889-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; for 1940-54 in the 1957-58 edition, p. 1168; and for 1955-59 in the 1967 edition, p. 1147. Statistics of fraternal society insurance, excluded here, are given at pp. 1143-1145.

Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 7 and 8 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

¹ Includes amounts written off shares purchased under mutualization plan.

Subsection 4.—Life Insurance in Canada Transacted by Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 9 gives statistics of life insurance in Canada transacted by fraternal benefit societies and Table 10 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary

certifies to the solvency of each fund. The first sections of Tables 9 and 10 relate to the Canadian societies registered by the federal Department of Insurance; there were 14 such societies at the end of 1966.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, although forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not been licensed previously by the provinces have since obtained federal authority to transact business. At the end of 1966 there were 35 foreign fraternal benefit societies federally registered to transact business in Canada, although two of these do not grant life insurance benefits.

**Subsection 5.—Life Insurance Effectuated and in Force Outside Canada by
Canadian Companies under Federal Registration**

In this Subsection, there are given for the years 1965 and 1966 summary statistics of insurance effectuated and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The data given are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies.

Canadian life insurance companies operating under federal registration at Dec. 31, 1966 had life insurance in force amounting to \$21,812,629,668 in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to \$21,787,442,839; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to \$52,622,094,411 at Dec. 31, 1966, and the total business on the books of these companies, in and out of

Canada, amounted to \$74,434,724,079. Thus, over 29 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada. In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1966, Commonwealth and foreign investments in the amount of \$3,894,523,405.

Approximately 71 p.c. of all business in force in currencies other than Canadian is in United States currency and 17 p.c. is in sterling. From a slightly different point of view, approximately 22 p.c. of this business in force is in currencies of Commonwealth countries other than Canada, and 78 p.c. in currencies of foreign countries.

Section 2.—Fire and Casualty Insurance

At the end of 1966 there were 258 companies registered by the Federal Government to transact fire insurance in Canada (83 Canadian, 64 British and 111 foreign). Of these companies, 250 (78 Canadian, 62 British and 110 foreign) were also registered to transact casualty insurance. In addition, 105 companies were registered by the Federal Government to transact casualty insurance but not fire insurance (28 Canadian, 7 British and 70 foreign). Of the companies registered to transact fire and/or casualty insurance, 83 were also registered to transact life insurance; 14 of these were registered for fire, life and casualty insurance and 69 for life and casualty but not fire insurance. It should be noted also that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 30 registered fraternal benefit societies transacting accident and sickness insurance, of which 28 also transacted life insurance.

The operations analysed in the tables of this Section, with the exception of Table 12, include only those companies under federal registration. As shown in Table 12, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation and many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis. The table relates to insurance companies only; no data are included for fraternal benefit societies.

Subsection 2.—Fire Losses

The information in Tables 15 to 17, which deals with the loss of property and life caused by fire, has been summarized from the annual report *Fire Losses in Canada* prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures in 1965 amounted to \$6,585,190 from 1,397 fires; average federal losses for the period 1956-65 amounted to \$4,621,052 from an annual average of 2,106 fires.

15.—Statistics of Fire Losses, 1956-65

NOTE.—Figures for 1926-46 are given in the 1947 Year Book, p. 1078, and those for 1947-55 in the 1960 edition, p. 1169. Figures from 1922 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

Subsection 4.—Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables 19 and 20 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

19.—Total Assets and Liabilities for Fire and Casualty Insurance of Canadian Companies and Assets and Liabilities in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1964-66.

Section 3.—Government Insurance

Federal Government Insurance

In recent years, various insurance schemes have been adopted by the Federal Government or undertaken co-operatively by the federal and provincial governments. Information on unemployment insurance, hospital insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Provincial Government Insurance

Saskatchewan.—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1966 amounted to \$12,489,743 and earned surplus to \$601,795. The total amount made available to The Government Finance Office of the Province of Saskatchewan from 1945 to Dec. 31, 1966 was \$6,144,564. Assets at the latter date were \$26,382,095, of which \$12,500,000 were invested in bonds and debentures issued by the Province of Saskatchewan and by Saskatchewan schools, municipalities and hospitals. Independent insurance agents numbering 625 sell government insurance throughout the province.

The Automobile Accident Insurance Act, administered by the Saskatchewan Government Insurance Office on behalf of the provincial government, provides a comprehensive automobile accident insurance plan for the protection of the public in this province. Premiums paid by motorists create a fund from which benefits are paid in the event of death, injuries and damages sustained in automobile accidents. Any surplus over payments is used to increase benefits, reduce premiums, or absorb deficits in periods of high accident frequency. The surplus is not transferable to the general operations of the Saskatchewan Government Insurance Office, nor is any surplus credited to the provincial government. The plan provides for public liability insurance, with an inclusive limit of \$35,000 for bodily injury and property damage, as well as comprehensive and collision coverage subject to a \$200 deductible for private passenger cars. Rates vary from \$4 a year for older farm trucks to \$74 for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1966, more than \$109,000,000 was paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Office Librarian, Saskatchewan Government Insurance Office, Regina, Sask.

Alberta.—Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. Although both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

Section 4.—Pension Plans*

Very few pension plans in Canada have been in existence for more than 25 years and most of the older plans were established by governments, banks and railways. The greatest growth in pension plans and coverage began during World War II and continued through the postwar years. By 1960 there were 9,000 pension plans in Canada covering some 1,800,000 persons and over the next five years the number increased by nearly 50 p.c. to an estimated 14,200 plans in 1966 covering some 2,300,000 persons.

Up to 1948 most plans were of the insured type, being underwritten by either an insurance company or the Government Annuities Branch of the Canada Department of Labour. The trust fund arrangement then began to grow in popularity and is now the dominant instrument for funding pension benefits measured in terms of membership and assets held. In 1966 contributions to trustee pension funds alone amounted to \$692,000,000, accounting for over 75 p.c. of all contributions to private pension plans. Funds of this magnitude represent a major medium for personal savings and the investment of these funds exerts a considerable influence on the capital market.

Table 21 shows the distribution of pension business for the years 1960-66, excluding the public service superannuation funds of the Federal Government and of six provincial governments which are nominal funds only, having no invested assets.

* Prepared by the Pension Plans Section, Labour Division, Dominion Bureau of Statistics.

¹ Excludes segregated pension plan funds, with assets of \$136,000,000 in 1966.

Most trusteed pension plans use the facilities of corporate trustees (trust companies) who invest the contributions, accumulate the earnings and pay benefits to the plan members. Trusteed pension plan funds are also managed by individual trustees or pension fund societies. The designated trustee, corporate or individual, must invest the contributions in accordance with the trust agreement which sets forth the rights and duties of the trustee. Many of the small funds invest in the "pooled funds" of trust companies which combine the assets of many pension funds, thus providing the diversification of investments usually available only to larger funds.

Table 22 shows the various trust arrangements and the income, expenditures and assets of trust funds for 1960-66.

Federal Government Annuities.—Since 1908 the Federal Government has sold annuities and industrial pension plans under the Government Annuities Act (RCS 1952, c.132). The purpose of the introduction of this legislation was to encourage people to save for old age but since the need for government service in this form has decreased in recent years, reduction of the program became justified and the employment of salesmen to solicit business was ended on Nov. 30, 1967. Annuities are still available under the Act to those who ask for them. At Mar. 31, 1967 there were 99,305 annuities being paid amounting to \$57,922,931 annually. There were 1,416 pension plans in force providing portable pensions to 188,248 employees, and there were 84,766 individual deferred annuities being purchased. The amount in the Government Annuities Account was \$1,324,518,806.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

PART I.—THE CANADIAN FORCES AND DEFENCE RESEARCH*

Section 1.—The Department of National Defence

The control and management of all matters relating to national defence, the Canadian Armed Forces and the Defence Research Board are the responsibility of the Minister of National Defence; the duties and functions relating to civil emergency operations in peace and war have also been assigned to the Department of National Defence, with the Canadian Forces undertaking the role.

The Canadian Forces Reorganization Act, which came into force on Feb. 1, 1968, "unified" the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force into a single service called the Canadian Armed Forces.

Effective Aug. 1, 1964, the Headquarters of the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force were integrated to form a single Canadian Forces Headquarters (CFHQ) under a single Chief of Defence Staff. The role of CFHQ is to provide military advice to the Minister of National Defence and to control and administer the Canadian Forces. CFHQ is organized into four functional Branches headed by the Vice Chief of Defence Staff, the Chief of Personnel, the Chief of Technical Services and the Comptroller General, who are responsible for advising and supporting the Chief of Defence Staff in matters relating to their assigned spheres of activity. The Defence Research Board conducts research relating to the defence of Canada and also undertakes the development of or improvements in materiel.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister, assisted by an Associate Deputy Minister, maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. Each of three Assistant Deputy Ministers administers a division of the Deputy Minister's Branch responsible for personnel, logistics and finance. Also responsible to the Deputy Minister are the Judge Advocate General, the Departmental Secretary and the Director of Information Services.

* Prepared by the Information Services, Department of National Defence, Ottawa.

The Defence Council meets at regular intervals to consider and advise on major policy matters. The Council consists of: the Minister of National Defence as Chairman; the Deputy Minister of National Defence, the Chief of Defence Staff, the Chairman of the Defence Research Board and the Vice Chief of Defence Staff as members, and a Secretary. The Branch Chiefs at CFHQ and the Vice Chairman of the Defence Research Board are associate members.

Liaison in Other Countries

The Chief of Defence Staff, who is the Canadian military representative to the North Atlantic Treaty Organization, is responsible for advice on all NATO military matters and acts as a military adviser to the Government and to Canadian delegations to NATO.* For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Defence Liaison Staff London, representing the Canadian Armed Forces and the Defence Research Board in Britain, the Commander of which is the principal military adviser to the Canadian High Commissioner in London; (2) the Canadian Defence Liaison Staff Washington, representing the Canadian Armed Forces and the Defence Research Board in the United States, the Commander of which is the principal military adviser to the Canadian Ambassador in Washington, and the Canadian National Liaison Representative to SACLANC Headquarters; (3) in Brussels, a Canadian member of the NATO Military Committee in Permanent Session, a Military Adviser to the Canadian Permanent Representative to the North Atlantic Council and also a Canadian National Military Representative to SHAPE; and (4) Canadian Forces Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence, which provides advice on such matters to the respective governments.

Rates of Pay Issuable to Canadian Forces

The entire pay structure for comparable ranks in the former three services has been and continues on a uniform basis. Tables 1 and 2 contain the monthly rates of pay for officers and men, respectively, effective Oct. 1, 1967. Equivalent ranks for the navy, army and air force are listed following Table 2.

* Canada's contributions to NATO are outlined on p. 180.

Allowances Issuable to Canadian Forces.—The following are the most common entitlements, aside from pay, for members of the regular Forces. Other entitlements related to special duties and to the Reserve Forces are not shown.

Aircrew Allowance.—Aircrew allowance in varying amounts may be paid to a member of aircrew, or an officer or man undergoing flying training to become a pilot, navigator or other member of aircrew if he is not already receiving the special rate of pay applicable to pilots or navigators.

Outfit Allowance and Clothing Upkeep Allowance.—Officers receive a single payment of \$450 on appointment and Warrant Officers Class 1 receive \$270. Men receive a free issue of clothing on joining and thereafter a monthly clothing upkeep allowance of \$7; Navy Petty Officers 1st Class and above receive \$8. Women receive a free issue of clothing on joining with an underclothing allowance of \$15, and thereafter a monthly clothing allowance of \$8.

Foreign Allowances.—Officers and men posted for duty to a country outside of Canada are entitled to allowances to compensate for additional living expenses or hardships incurred; these vary with rank, appointment and location.

Isolation Allowance.—Isolation allowance, at rates which depend on the specific location, is paid to personnel serving at isolated posts in Canada.

Submarine Allowance.—An officer or man undergoing submarine training or filling an appointment in a submarine receives from \$32.50 to \$115 a month, depending on rank.

Risk Allowance.—An officer or man actively engaged or undergoing training as a parachutist or on flying duties, and not entitled to aircrew allowance, is paid risk allowance at the rate of \$30 a month.

Sea Duty Allowance.—An officer or man serving in a ship is entitled to sea duty allowance at the rate of \$15 a month.

Section 2.—The Command Structure of the Canadian Forces

The Canadian Forces are organized on a functional basis to reflect the major commitments assigned by the Government. Under this concept, all Forces devoted to a primary mission are grouped under a single commander who is assigned sufficient resources to discharge his responsibilities. Specifically, the Canadian Forces are formed into nine major organizational entities reporting to the Chief of the Defence Staff. These are as follows:—

MOBILE COMMAND

The role of Mobile Command is: to provide military units suitably trained and equipped to support United Nations or other peacekeeping/peace-restoring operations; to provide ground forces, including tactical air support for the protection of Canadian territory; and to maintain operational readiness of combat formations in Canada required for support of overseas commitments.

The Forces assigned include: three infantry brigade groups in Canada; the United Nations Force in Cyprus; one RCAF Reconnaissance Squadron; and one Transport Helicopter Platoon. Two of the brigade groups in Canada are being reorganized to perform a wide variety of roles and will be provided with air-portable equipment.

4 CIBG is the Canadian contribution to NATO ground forces in Europe. It also contains a surface-to-surface missile (Honest John) battery in addition to the normal artillery field regiment.

MARITIME COMMAND

All Canadian Maritime forces, both sea and air, are under the Commander, Maritime Command, whose Headquarters are in Halifax. The Deputy Commander is the Commander, Maritime Forces Pacific, with Headquarters in Esquimalt.

The role of Maritime Command is to defend Canadian interests from assault by sea and to support NATO by assisting in conducting anti-submarine warfare in the Allied Command, Atlantic. The Commander, Maritime Command is the NATO Commander of the Canadian Atlantic Sub-Area of the Western Atlantic Command, under the Supreme Commander, Allied Command Atlantic (SACLANT). An additional role is to provide any sea-lift required by Mobile Command.

Available to the Maritime Command are one aircraft carrier, one operational support ship, two escort maintenance ships, 22 escorts of destroyer type, three submarines and six minesweepers; 12 *Tracker* aircraft and six *Sea King* helicopters are carried in HMCS *Bonaventure*, nine destroyers can each take one *Sea King*, and a further 12 *Trackers* operate from shore in conjunction with the main Maritime patrol force of four squadrons, three equipped with *Argus* aircraft and one with *Neptune*. Two further squadrons of aircraft provide training and communication facilities within the Command.

1 AIR DIVISION

1 Air Division is the Canadian contribution to the strike-reconnaissance forces available to SACEUR. The Division is operationally responsible to 4 Allied Tactical Air Force (4 ATAF) and has six squadrons equipped with CF-104 *Super Starfighters* located at three airfields in Germany.

AIR DEFENCE COMMAND

Air Defence Command participates jointly with the United States in the air defence of North America, through NORAD. It has functional control of three interceptor squadrons, two SAM squadrons, one SAGE control centre and two transcontinental radar lines. Operational control is exercised by HQ NORAD.

AIR TRANSPORT COMMAND

The role of Air Transport Command is to provide air transport support to Canadian Forces everywhere, and to conduct search and rescue operations in the Eastern Search and Rescue Area (roughly, Ontario and Quebec). It has four squadrons operating short-range and long-range cargo and troop-carrying aircraft as well as communications and rescue units.

TRAINING COMMAND

The role of Training Command is to provide individual training for the Forces and to conduct search and rescue operations within the Western Search and Rescue Area (roughly, Manitoba, Saskatchewan and Alberta). All former training units of the RCN, the Canadian Army and the RCAF where individual training is carried out have been placed under functional control of Training Command. The Canadian Services Colleges (Royal Military College, Royal Roads and Collège militaire royal de Saint-Jean), the Staff

Colleges, and medical/dental training are under the direct control of Canadian Forces Headquarters (see pp. 1168-1169). Land/Air Warfare operational training and basic parachute training are the responsibility of Mobile Command. Basic fixed wing and helicopter pilot training are a Training Command responsibility.

THE CANADIAN FORCES COMMUNICATIONS SYSTEM (CFCS)

The role of the CFCS is to provide fixed communications networks for the Forces and to provide a national communications system for survival operations (civil defence). To carry out this role, CFCS commands all fixed communications installations within Canada.

THE RESERVE AND SURVIVAL ORGANIZATION

The Command and administration of the Reserves and Cadets is the responsibility of the Deputy Chief of Reserves (Major-General) at CFHQ. The Naval Reserve reports to the Deputy Chief of Reserves through the Commander, Naval Reserve. The Militia and Cadets are commanded and administered through five Region Headquarters and seven District Headquarters that are organized on a geographical basis. The Air Reserve reports through the Commander, Air Transport Command.

The role of the organization is to provide Reserve forces-in-being to support the Regular Forces under their functional commanders; a training force to support the Regular Forces; aid to the civil power; emergency forces for civil emergency operations—peace and war; and provincial representation.

MATERIEL COMMAND

The role of Materiel Command is to provide logistic support of the Forces, i.e., procurement, provisioning and supply of materiel. To carry out this role, Materiel Command controls the operations of naval dockyards, ordnance depots, engineer depots, supply depots, repair depots and base workshops in Canada.

Administration of Military Bases in Canada

Staffs and services required below Command Headquarters level to administer and support units based in a particular locality have been organized on Canadian Forces bases. The primary role of each base is to provide base-level administration and supporting services to those units located on or near the base. Each base has been allocated to a functional commander, to whom the base commander reports. The base commander is provided with sufficient staff, with representation from the four functional branches, to command and administer the base.

Section 3.—Operations and Training of the Canadian Forces

The Royal Canadian Navy

The Fleet.—As of December 1967, the RCN had 30 ships in commission and 12 in reserve. HMCS *Onondaga* joined the fleet in October and the third Oberon Class conventional submarine was expected to commission in June 1968. The extensive refit of the aircraft carrier *Bonaventure* was completed in September 1967 and it began operating out of Halifax. The modernization of *Terra Nova* was progressing, scheduled for completion by mid-1968, and plans were made to start the program of converting the remaining six ships of this class in 1969. A serious fire in the hydrofoil *Bras d'Or* prevented trials being conducted in 1967. Construction of the research vessel *Quest* was expected to be completed in the spring of 1969 and construction of the two operational support ships was progressing—*Protecteur* being scheduled for completion in June 1969 and *Preserveur* five months later. Negotiations for the building of four new destroyer escorts were nearing completion, with construction of these gas-turbine-powered ships expected to begin early in 1968. By the end of 1967, all the World War II frigates had been offered for disposal except HMCS *Granby*, which is the base for the East Coast diving school.

Training.—The major training establishments of the RCN are CFB Cornwallis near Digby, N.S.; Fleet School Shearwater near Dartmouth, N.S.; Fleet School Halifax at Halifax, N.S.; CFS Gloucester near Ottawa, Ont.; and Fleet School Esquimalt at Esquimalt, B.C.

Men and women entering the RCN receive their basic training at CFB Cornwallis where the courses are normally 14 weeks in length. English language training is provided for French-speaking recruits at CFB St. Jean, Que., the courses lasting an average of 21 weeks. Cadets entered under the Regular Officer Training Plan (ROTP) or the University Training Plan (Men) (UTP) receive most of their early training at the Canadian Services Colleges (see p. 1168) or a Canadian University; those entered on a short-service appointment train at Venture Division, Fleet School Esquimalt. All cadets receive practical training with the Fleet at various times of the year. A University Naval Training Division program provides junior officers for the RCN and the RCN Reserve. The cadets are required to complete two winter-training periods, two summer-training periods and certain specified courses. This program is being phased out during 1968 and a new system to produce officers for the Reserve from university undergraduates is being developed.

Royal Canadian Naval Reserve.—Recruiting and training of officers and men of the Royal Canadian Naval Reserve is conducted mainly through 16 Naval Reserve Units across Canada under the Commander, Naval Reserve, who is also the Director General, Reserves, located at CFHQ, Ottawa. Naval Reserve Units are established at the following centres:—

St. John's, Nfld., HMCS *Cabot*
 Halifax, N.S., HMCS *Scotian*
 Saint John, N.B., HMCS *Brunswick*
 Quebec, Que., HMCS *Montcalm*
 Montreal, Que., HMCS *Donnacona*
 Toronto, Ont., HMCS *York*
 Ottawa, Ont., HMCS *Carleton*
 Kingston, Ont., HMCS *Cataragui*

Hamilton, Ont., HMCS *Star*
 Windsor, Ont., HMCS *Hunter*
 Port Arthur, Ont., HMCS *Griffon*
 Winnipeg, Man., HMCS *Chippawa*
 Saskatoon, Sask., HMCS *Unicorn*
 Calgary, Alta., HMCS *Tecumseh*
 Vancouver, B.C., HMCS *Discovery*
 Esquimalt, B.C., HMCS *Malahat*

Naval Reserve Units are commanded by Reserve officers and provide both basic and specialized training for officers and men of the Naval Reserve. The Great Lakes Training Centre at Hamilton, Ont., conducts new-entry Reserve training ashore and afloat during the summer months.

The Canadian Army

Operations in 1967.—In fulfilment of military obligations under the North Atlantic Treaty, Canada continued to provide ground forces for the defence of Western Europe. The 4th Canadian Infantry Brigade Group, the major units of which were the Lord Strathcona's Horse (Royal Canadians), the 1st Regiment Royal Canadian Horse Artillery, No. 1 Surface to Surface Missile Battery, 2nd Battalion The Royal Canadian Regiment, 2nd Battalion Princess Patricia's Canadian Light Infantry, and the 2nd Battalion Royal 22^e Regiment (replaced by the 1st Battalion in late 1967), constituted the Land Forces contribution to NATO in Germany. The Headquarters of the Brigade is at Soest and the married quarters are located in the vicinity of Soest, Werl, Hemer and Iserlohn. Canada also provides two infantry battalions to the Allied Command Europe Mobile Forces (Land Component). They are stationed in Canada but held in readiness for employment should the Mobile Force be activated.

The Canadian Armed Forces continued to provide forces in support of United Nations operations as follows: (1) a force of 880 officers and men formed part of the UN Force in Cyprus; the Canadian contribution consisted of a reconnaissance squadron, an infantry battalion, a Canadian Contingent Headquarters and a Canadian element for the UN Headquarters; (2) Canadian Armed Forces contributions to other UN missions included some 40 officers and men employed in Palestine, Kashmir and Korea; and (3) a specially trained and equipped infantry battalion is maintained in Canada to provide a force for service in support of the UN in any part of the world on short notice.

In addition to its UN commitments, the Canadian Armed Forces, as a result of Canadian participation in the International Commissions for Supervision and Control in Viet-Nam, Cambodia and Laos, continued to provide approximately 50 officers and men for truce supervisory duties in Indo-China.

Canadian Armed Forces training teams are being maintained in Ghana and Tanzania to assist in the training of the armed forces of those countries. A number of officer cadets and other ranks from Ghana, Tanzania, Barbados, Jamaica, Trinidad and Tobago, Malaysia and Zambia have received training in Canadian Forces schools.

Training.—Most of the recruit, basic and advanced training in support of the Canadian Army Regular takes place at schools under the supervision of Training Command. During 1967, a training enrolment of 3,415 recruits and the corps training of officers and men of the Army were carried out at regimental depots, units and schools. Sixty-four officers attended the Canadian Army Staff College and 10 commenced courses at Commonwealth Staff Colleges. Qualifying courses for junior and senior NCOs were conducted at Training Command schools. Officers from the RCAF and RCN as well as officers from Australia, Belgium, Britain, Germany, India, Pakistan, Tanzania, Jamaica, Zambia and the United States attended courses at Canadian Forces schools.

English and French language training is available to all ranks at the Canadian Forces School of Languages, CFB St. Jean, Que. Trades training is given at schools and units. When required, the facilities of civilian and allied service schools are used to supplement training at service establishments.

In 1967, the training of the Field Force took place under the direction of Mobile Command. Airborne continuation training was carried out by designated units in conjunction with unit exercises. The air transportable ACE Mobile Force Battalion participated in a winter exercise in Norway under cold-weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Air Training Centre at Rivers, Man., and courses in arctic training at CFB Borden, Ont. Collective training for units in Canada was carried out at CFBagetown, N.B., and CFB Wainwright, Alta. All-arms training comprised sub-unit and unit training, and culminated in exercises at the Brigade Group level.

Under the Regular Officer Training Plan (ROTP), selected students are trained for commissions in the Canadian Forces at the Canadian Services Colleges (see pp. 1168-1169) and at Canadian universities and colleges that have university reserve units. Also, university reserve units form an integral part of the campus life at most universities. These are maintained primarily to produce officers for the Reserve components of the Canadian Forces and include training similar to that given members of the ROTP. This program will be altered in the future; a new system to produce officers in the Reserve from university undergraduates is being developed.

The Militia.—The new precedence of roles of the Militia is: support of the Regular Forces; provision of a training force; and assistance with internal security and the provision of specialists to assist in staffing civil emergency operations installations in times of national emergency. Militia training is intended to produce personnel and units well trained in the basic military skills and techniques of their corps and in the basic skills for survival operations. In consonance with these newly assigned roles, the Militia was extensively reorganized during the period November 1964 to March 1965. Based largely upon recommendations of the Ministerial Commission on the Reorganization of the Canadian Army (Militia), a total of 171 self-accounting units, having an approved establishment of 41,290 all ranks, was authorized. Concurrently, personnel and training policies were revised, with emphasis placed on youth, physical fitness, professional competence and vigorous leadership.

The Royal Canadian Air Force

Operations in 1967.—The RCAF contribution to the air defence of North America during the year consisted of three CF-101B interceptor squadrons, two Bomarc surface-to-air missile squadrons and 27 radar sites. These forces, together with the Distant Early Warning Line (DEW), operated under the operational control of North American Air Defence Command (NORAD). No. 1 Air Division, Canada's NATO contribution in Europe, operated with six squadrons of CF-104 aircraft. Four of these squadrons were employed in the strike attack role and the other two were employed in the photo reconnaissance role.

The RCAF contributed four land-based maritime squadrons to the Maritime Defence of North America; three of these, based on the East Coast, are equipped with *Argus* aircraft, the largest and most modern anti-submarine aircraft in the world. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was conducted throughout the year. The East Coast squadrons and the *Neptune* aircraft squadron on the West Coast participated in a number of national, international and NATO anti-submarine exercises, and maintained daily patrols and surveillance of ocean areas adjacent to the Canadian coastlines. Early in 1966, the RCAF Maritime Air Command became an integral part of the new integrated Maritime Command.

Air Transport Command (ATC) continued to provide support to the Air Division and to the Army Brigade in Europe, using long-range *Yukon* and *Hercules* aircraft. Airlift support was provided to the UN Emergency Force Middle East and to the UN contingents in Cyprus. Flying units, operating *Caribou* and *Otter* aircraft, were maintained in Egypt and India/Pakistan in support of UNEF and UNMOGIP. In Canada, ATC airlifted Department of National Defence personnel and cargo from coast-to-coast and into the Arctic regions. *Hercules* aircraft were employed for paratroop training of the Canadian Army, and T-33 aircraft carried out routine photographic missions for the Department. Search and rescue services were provided in the Canadian areas of responsibility. Throughout this year, the RCAF flew more than 6,000 hours on search and rescue missions involving missing persons, aircraft and marine vessels. Altogether, some 2,000 separate incidents were dealt with.

Training.—Each year the RCAF gives basic training to several thousand officers and men to meet retirements, releases and the introduction of new equipment. English language training on initial enlistment is given to French-speaking personnel—at St. Jean, Que., for officers and airmen. Course length is variable, up to an average of 21 weeks. Advanced trades training is given within the Service, training on specialized equipment is obtained also from industrial firms, and some officers attend postgraduate courses at Canadian and United States universities. In addition, aircraft trades training is given to a number of trainees from developing countries.

Aircrew selection is carried out at Aircrew Selection Centre, CFB Toronto, Ont. Indoctrination training for aircrew officer cadets takes place at Venture Division, Fleet School Esquimalt. RCAF pilots are given basic and advanced jet training at Moose Jaw, Sask., and Gimli, Man., and advanced multi-engine training at Portage la Prairie, Man. Radio navigators are trained at Winnipeg, Man. In the year ending Mar. 31, 1968, approximately 180 RCAF pilots and 35 radio navigators will complete training to "wings" standard; pilot training on piston-engined aircraft will be provided for 37 RCN and one CA(R) officer. Under bilateral agreements, jet training will be provided for 24 Danish, 24 Norwegian and two Malaysian pilots; radio navigation training for three Norwegian and four Danish navigators; and basic helicopter training for two Danish naval pilots.

Indoctrination training for newly commissioned non-flying list officers is given at CFB Esquimalt, B.C., and technical training at CFB Clinton, Ont. Basic and advanced trades training for airmen is given at technical trades schools at CFBs Borden and Clinton, Ont. Trade Advancement training to help airmen improve their job proficiency and to qualify for higher trade grouping and pay is provided to Regular and Reserve personnel. Opera-

tional training on specific aircraft and equipment is given at field technical training units and operational training units situated throughout Canada. Semi-annual trade examinations are written under the direction of the Training Standards Establishment, Trenton, Ont.

Air Reserve.—The active sub-components of the Air Reserve are designated as the Auxiliary and the Primary Reserve.

The Auxiliary is made up of four Auxiliary Wing Headquarters located in Montreal, Toronto, Winnipeg and Edmonton and six Flying Squadrons located in the same cities; Wing Headquarters directs the operations, training and administration of the Flying Squadrons in their respective areas. All Flying Squadrons are equipped with the DHC-3 *Otter*. Their role is light transport, civil emergency operations—peace and war, and search and rescue services. Light transport and civil emergency operations exercises are carried out in conjunction with Regular and Reserve formations of the RCN and the Canadian Army as well as the RCAF. Search and rescue operations are usually carried out in accompaniment with civilian and RCAF Regular counterparts. In the event of emergency, these squadrons would be used to support military and civilian requirements.

The Primary Reserve is composed of Air Cadet Officers who staff the Royal Canadian Air Cadet Squadrons throughout Canada, of Manning Support Officers who are employed for 15 to 30 days each year in career counselling duties at recruiting units, and of University Squadron Staff Officers whose main function is to train members of the University Reserve Training Plan (URTP) during the academic year. The URTP will be altered in the future. Studies are in progress to develop a new system to produce officers for the Reserves based on utilization of undergraduates.

The Canadian Armed Forces Cadets

The object of the cadet movement in Canada is to provide the opportunity for young men, aged from 13 to 18, to acquire the fundamentals of good citizenship and leadership. This is achieved by a combination of training at the local cadet units and at summer camps. In keeping with the unified concept of the Canadian Armed Forces, the Sea, Army and Air Cadet organizations have integrated the command and control functions of their respective organizations and adopted a common aim: "To develop in youth the attributes of good citizenship and leadership; to promote physical fitness; and to stimulate their interest in the Sea, Land and Air elements of the Canadian Forces".

Royal Canadian Sea Cadets.—Royal Canadian Sea Cadets, sponsored by the Navy League of Canada in partnership with the Canadian Forces, comprise 169 corps. These corps are supervised jointly by the local branches of the League, and by naval officers in each of Canada's five military regions.

Instruction at corps level is carried out by Royal Canadian Sea Cadet Officers. Two training establishments—Cornwallis on the East Coast and Quadra on the West Coast—accommodate officers and cadets for two-week training periods in the summer. In addition, selected cadets receive a six-week training course at naval establishments. Sea experience is provided throughout the year in HMC Ships. As of Sept. 30, 1967, the strength of the corps was 1,025 officers and 10,856 cadets.

Royal Canadian Army Cadets.—Supervision of organization and training of Army Cadets is carried out by the Region and District Regular Force staff. The training and administration is the responsibility of officers of the Cadet Services of Canada, a sub-component of the Reserves and civilian instructors. As of Sept. 30, 1967, officers and civilian instructors numbered 2,047, and there were 57,161 cadets enrolled in 498 corps.

In 1967, 4,830 cadets attended six-week trades and specialist courses at Aldershot, N.S., Farnham, Que., Ipperwash Beach, London and CFB Borden, Ont., Clear Lake, Man., Calgary, Alta., and Vernon, B.C.; 2,023 cadets attended two-week cadet leader and special camps at Aldershot, N.S., Montreal, Que., Ipperwash Beach and Sandstone Lake, Ont.,

Clear Lake and Rivers, Man., and Albert Head, B.C.; 220 master cadets, one officer and six cadets from Britain attended the Banff National Army Cadet Camp, Alta., for four weeks; 61 cadets proceeded on an exchange of cadets between Canada and Barbados, Jamaica, Trinidad, Tobago and Grenada during the summer of 1967 and one officer and six cadets attended the Outward Bound Course in Towyn, Wales; 275 cadet instructors attended qualifying courses of up to six weeks and 428 cadet instructors were employed in training and administrative duties at summer camps.

Royal Canadian Air Cadets.—The Cadet Services of Canada provides training personnel, syllabi and equipment and assistance in organization and administration, and the Air Cadet League of Canada sponsors and administers the Cadet activities.

During the summer of 1967, camps were conducted at Canadian Forces Bases at Greenwood, N.S., St. Jean, Que., Trenton, Ont., and Penhold, Alta., attended by more than 7,000 cadets. The camp at St. Jean, designated the Centennial Air Cadet camp, was the hub of an interprovincial exchange program. A seven-week Senior Leaders Course was conducted at CFB Borden, Ont., for 240 cadets. A Bush Familiarization Course, teaching the techniques of survival and ground search was conducted at CFB Namao, Alta., for 54 cadets. Under the International Air Cadet Exchange Visits Program for 1967, 62 Air Cadets were exchanged with Austria, Belgium, Britain, France, the Netherlands, Norway, Sweden, Switzerland, Turkey, the United States and West Germany. In 1967, 250 Senior Air Cadets received flying training at flying clubs through Service-sponsored scholarships; 83 additional scholarships were awarded by the Air Cadet League and other organizations. Successful graduates qualify for a Private Pilot Licence. Air Cadet strength at Sept. 30, 1967 was 28,000 cadets in 274 squadrons across Canada.

Section 4.—Services Colleges and Staff Training Colleges

Canadian Services Colleges

The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers, and Collège militaire royal de Saint-Jean established at St. Jean, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948, and Collège militaire royal de Saint-Jean was opened in 1952. In 1959, the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character, loyalty and leadership essential to officers of the Armed Forces. The courses of instruction provide a sound and balanced liberal, scientific and military education leading to degrees in arts, science and engineering which are granted by the Royal Military College.

For cadets entering the Royal Military College and Royal Roads, the duration of the course is four years. As the third and fourth years of the course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final years of the arts, science or engineering courses. For cadets entering Collège militaire royal de Saint-Jean, which gives a preparatory year, the duration of the course is five years. Cadets take the preparatory, first and second years at that institution and the final two years at the Royal Military College.

For admission to the Royal Military College of Canada and to Royal Roads, an applicant must have obtained senior matriculation or equivalent standing. For admission to Collège militaire royal de Saint-Jean, an applicant must have junior matriculation or equivalent. A candidate who has obtained a Bachelor of Arts degree at a classical college or has completed first year science or philosophy II at Collège Mont Saint-Louis may

apply for entry into first year at Collège militaire royal de Saint-Jean. A candidate must be single, a Canadian citizen, and be physically fit. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry.

Most cadets entering the Services Colleges enrol under the Regular Officer Training Plan. Applicants accepted enrol according to their choice, as cadets in the Royal Canadian Navy, the Canadian Army or the Royal Canadian Air Force. Costs of tuition, uniforms, books, instruments and other fees are borne by the Department of National Defence and cadets are paid \$180 a month. Cadets are charged \$85 a month for board and lodging. On successfully completing their academic and military training, cadets are granted permanent commissions in the Regular Force.

A limited number of high school students may be selected to enter the Services Colleges on payment of tuition fees, etc. Graduates are granted commissions and serve in the Reserve components of the Forces. Young men who qualify for Dominion Cadetships also serve in a reserve capacity. These Cadetships are awarded by the Federal Government in recognition of a candidate's parent having been killed, died or been severely incapacitated in the service of one of Canada's Armed Forces or the Canadian Merchant Marine during hostilities. A maximum of 15 Dominion Cadetships may be awarded in any one year, five in each Service. Each is valued at \$580, which covers first-year fees.

During the 1967-68 academic year, 1,169 cadets were in attendance at the Services Colleges, 564 of them at the Royal Military College, 222 at Royal Roads and 383 at Collège militaire royal de Saint-Jean. Of the total, 253 were enrolled in the Navy, 411 in the Army and 505 in the Air Force.

Staff Training Colleges

The Canadian Army Staff College at Kingston, Ont., gives an 11-month course for the training of officers for staff appointments. Although most of the student body is composed of Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. Instruction is based upon the study of précis and references, demonstrations and lectures, and indoor and outdoor exercises. Aside from purely military subjects, the curriculum includes research and development, world affairs and lectures by prominent guest speakers.

The Canadian Forces College at Armour Heights, Toronto, Ont., consists of three colleges for the staff training of officers:—

Staff College.—Officers of Major (equivalent) rank take a 44-week course to prepare them for assumption of higher rank in the Canadian Armed Forces. Training emphasizes logical and precise written and oral expression of ideas; staff and administrative procedures; scientific and technical developments; and national and international current affairs. The syllabus is supported by a variety of expert military and civilian guest lecturers and visits to Canadian and United States military and civilian establishments.

Staff School.—Officers of Captain and Lieutenant (equivalent) rank take a 14-week course to prepare them to assume junior staff and administrative positions in the Canadian Armed Forces. Training emphasizes military administrative procedures; the conduct of correspondence; and civil and military organization. Students also study national and international current affairs.

Extension School.—Selected military and academic courses of study by correspondence are offered to all officers of the Canadian Armed Forces.

National Defence College at Kingston, Ont., the senior defence college, provides an 11-month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and Federal Government departments attend, as well as a few representatives from industry. Lecturers are chosen from among the leaders in various fields in Canada and other countries. In addition, tours and visits to certain parts of Canada, the United States, Europe, Asia, Africa, Australia and Latin America familiarize students with conditions and influences in their own and other countries.

Section 5.—The Defence Research Board

The Defence Research Board is the agency in the Department of National Defence responsible for scientific research. It was created in 1947 by an amendment to the National Defence Act. It provides, through the Chairman, scientific advice to the Minister of National Defence and scientific and technical assistance to the Canadian Armed Forces.

The Board consists of a full-time chairman and vice-chairman, five ex-officio members and a varying number of members selected from universities and industry appointed by the Governor in Council. The ex-officio members are the Deputy Minister of National Defence, the President of the National Research Council, the Chief of Defence Staff, the Vice Chief of Defence Staff and the Chief of Technical Services. The Chairman is the chief executive officer of the Board's research organization. He is a member of the Defence Council, which is the senior policy body of the Department of National Defence. The Vice-Chairman is an associate member.

The research organization consists of eight research establishments in which an intramural program of research specifically oriented toward military needs is carried out. The Board also conducts an extramural research program through grants in aid of research to universities. These investigations are usually basic in nature and seek to provide new knowledge in fields from which important military developments are likely to arise. Support is also provided to industry with the object of promoting and strengthening the research capability of Canada's defence industry. This is a program of applied research of defence interest. It is financed on a cost-sharing basis with industry with each (government and industry) providing 50 p.c. of the funds.

The Defence Research Board is active in international collaboration in defence science throughout the western world. A very active quadripartite organization with Britain, Australia and the United States has been built up to ensure full utilization of defence scientific knowledge, resources and facilities of these countries. In addition, bilateral agreements with several NATO nations serve to enhance the interchange of defence scientific and technical knowledge in areas of mutual interest. The Board represents Canada on a number of specialist committees through which NATO's scientific endeavours are processed and co-ordinated. The Board also provides representation on the Commonwealth Defence Science Organization which fosters and promotes scientific exchange between the countries of the Commonwealth. It maintains liaison offices in Washington, London and Paris.

Research on maritime warfare problems, particularly those relating to submarine detection and tracking, is carried out at the Defence Research Establishment Atlantic and at the Defence Research Establishment Pacific. Research and development of weapons and defence against various weapons is undertaken in co-operation with the Armed Forces at several establishments, the largest of which is the Canadian Armament Research and Development Establishment. Its principal activities include studies of defence against missiles, studies of the properties and application of infrared and other detection devices, exploration of the upper atmosphere with balloons and rockets, and the development of rocket propellants.

The Defence Research Telecommunications Establishment is concerned mainly with problems of communications which involve exploration of the ionosphere with ground-based equipment, with rockets and with satellites, and the applications of the science of electronics to military problems. Research on the defensive aspects of chemical, biological and atomic weapons is carried out at two Defence Research establishments—the Defence Chemical, Biological and Radiation Establishment at Ottawa, and the Defence Research Establishment Suffield at Ralston, Alta. The Defence Research Establishment Toronto is concerned with biosciences research, chiefly with raising the operating efficiency of men working in the military environment, including such subjects as human physiology, experimental psychology and research on clothing. Defence Operational Research Establishment provides scientific evaluation and analysis of present and future weapons systems, tactical doctrine and other aspects of military operations.

Thus, the Board continues to support the fields of research which are of foremost interest to the Canadian Armed Forces and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

PART II.—DEFENCE PRODUCTION*

Under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity, capability and materials are available to support the defence production program. The latter responsibility includes defence development and production-sharing with the United States, defence production export activities with NATO and other friendly countries, and co-operation in research, development and production programs within the NATO alliance. The Department also provides management and staff for the Canadian Commercial Corporation, a Crown company primarily responsible for the contracting in Canada for defence goods purchased by other governments and for contracting for supplies to meet Canadian requirements under External Aid Programs and other international agreements. The Department is responsible for planning and making other necessary arrangements for the immediate establishment of a war supplies agency, should there be a nuclear attack.

Implementing recommendations of the Royal Commission on Government Organization, the Government assigned to the Department of Defence Production the responsibility for forming a central purchasing and supply agency. The plan of organization for a future Department of Supply prepared by the Department requires the integration of the purchasing organization of Defence Production with supply functions. The supply functions were grouped with regional purchasing functions of Defence Production and the Canadian Government Repair Service to form the Canadian Government Supply Service.

Procurement contracts issued by the Department of Defence Production had a net value of \$1,030,848,000 in 1966 and \$530,729,000 in the first half of 1967. (The net value of contracts is made up of the value of new contracts issued as well as amendments that increased or decreased existing contracts.) The net value of contracts in 1966 according to the various services for which they were issued was as follows:—

<i>Source</i>	<i>Net Value</i>	<i>P.C. of Total Value</i>
	\$'000	
Department of National Defence.....	710,838	68.96
Department of Defence Production (DDP Votes).....	8,156	0.79
Foreign Governments.....	186,068	18.05
External Aid.....	35,421	3.44
Federal Civil Departments and Agencies.....	90,365	8.76
TOTALS.....	1,030,848	100.00

The \$710,838,000 in contracts placed on behalf of the Department of National Defence in 1966 was 50.1 p.c. higher than the value in 1965. There were increases of \$157,980,000 in the aircraft program, \$41,765,000 in the shipbuilding program, and \$17,570,000 in the armament program, and smaller increases in the tank-automotive program and the electronics and communications equipment program of \$2,235,000 and \$2,099,000, respectively.

Contracts placed outside Canada on behalf of the Department of National Defence in 1966 amounted to \$130,403,000, which constituted 18.3 p.c. of the total net value of prime contracts issued. Contracts valued at \$109,468,000 were placed in the United States,

* Prepared in the Information Division, Department of Defence Production, Ottawa.

\$6,035,000 in Britain and \$14,900,000 in other countries. Expenditures on contracts in 1966 amounted to \$483,657,000, an advance of 4.5 p.c. over 1965. Expenditures against tank-automotive programs increased by \$16,647,000 or 110.5 p.c., and against aircraft programs by \$3,162,000 or 2.0 p.c., those against electronics and communications equipment programs decreased by \$1,078,000 or 1.1 p.c.

Of the \$530,729,000 in contracts issued during the first half of 1967, \$343,405,000 or 64.7 p.c. was for the Department of National Defence. Expenditures against prime contracts placed for that Department stood at \$253,483,000. The Department of Defence Production placed \$8,156,000 in contracts in 1966 and \$6,906,000 in the first half of 1967 against certain appropriations to assist Canadian defence industry. Revolving Fund contracts amounted to \$42,050,000 in 1966 and \$30,600,000 in the first half of 1967.

Contracts placed for all sources other than the Departments of National Defence and Defence Production votes totalled \$311,854,000 in 1966, of which \$186,068,000 was for foreign governments, \$90,365,000 was for civilian departments and agencies of the Canadian Government, and \$35,421,000 was for External Aid programs. For the first six months of 1967 contracts placed for foreign governments amounted to \$108,550,000, for Canadian non-defence Government departments and agencies \$57,068,000, and for External Aid programs \$14,800,000.

Defence Production and Development Sharing.—In 1966, United States defence production-sharing contracts placed with Canadian industry totalled \$317,009,803, an increase of 22 p.c. over 1965. A major factor in the increased procurement was the substantial success achieved by Canadian companies in competition with United States sources in supplying components and assemblies for major aircraft programs such as the C5A transport and F-111 fighter/bomber and for airborne electronic navigation and computer equipment. The total United States defence production-sharing procurement in Canada during the eight years of the program was \$1,491,300,000.

Prime contracts placed by the United States Government with the Canadian Commercial Corporation totalled \$128,900,000 in 1966 and subcontracts received directly by Canadian firms were valued at \$184,677,885. Other prime contracts received directly from the United States Government by Canadian industry and other institutions had a value of \$3,500,000.

In 1966, continued assistance was given to Canadian industry under the development-sharing program for research and development projects of interest to the United States Services; 70 such contracts were in effect, with expenditure totalling \$22,400,000.

Co-operation in NATO and RDP (Research, Development and Production) and Defence Exports Overseas.—Canadian industry is encouraged to participate in supplying the defence needs of friendly European and other countries in such areas as aircraft, aircraft engine spares, training and navigational aids and armament and ammunition components. During 1966, nearly 80 Canadian firms reported the receipt of \$78,322,000 in defence prime contracts and subcontracts from some 40 NATO and other countries (excluding the United States), although over 95 p.c. of this business came from some 13 countries. Of this total, which was an increase of 15.6 p.c. over 1965, prime contracts accounted for \$62,059,000 and subcontracts placed in Canada by overseas defence contractors accounted for \$16,263,000. The major purchases in this group were for *Caribou*, *Twin Otter*, CL-41G and CL-215 aircraft, F-104G simulator spares, navigational equipment for the F-104G and other aircraft, radio relay equipment, spares for vehicles, aircraft engine spares, projectiles and a further contribution to the shared development of the AN/USD-501 surveillance drone.

During 1966, Canadian defence contracts placed in overseas countries on behalf of the Canadian Armed Forces amounted to \$30,071,000, consisting of \$19,918,000 in prime contracts and \$10,153,000 in subcontracts, making a balance in defence contracting of \$48,251,000 in Canada's favour.

PART III.—CIVIL EMERGENCY PLANNING (CIVIL DEFENCE)

The present arrangements for civil emergency planning in Canada took form in 1958 following an analysis by the Canadian Government of the kind of military and civilian arrangements necessary to prepare the nation for the possibility of nuclear war. This review led to a major rearrangement of federal civil defence functions, together with an offer from the Federal Government to assume certain responsibilities previously borne by provinces and municipalities. The reorganization, which became effective Sept. 1, 1959, was based on the principles that (1) civil defence was properly a function or activity of government rather than a separate organization as such, and (2) this function should be divided into clearly defined tasks assigned to the appropriate levels of government, and at each governmental level made the responsibility of those departments or agencies best able to undertake and discharge them.

The Canada Emergency Measures Organization is the federal co-ordinating agency for all civil emergency planning. The Civil Emergency Measures Planning Order (Order in Council PC 1965-1041) dated June 8, 1965, defines the functions of the Canada Emergency Measures Organization, designates it as a department for administrative purposes and places it under the control and supervision of the Minister of Industry. Its functions include:—

- (1) the development of policies and a program to ensure the continuity of government in an emergency;
- (2) the co-ordination of civil emergency planning and training within the Federal Government;
- (3) in conjunction with provincial authorities, the development of policies and a program for the control of civil road transport resources;
- (4) the provision of assistance and guidance to provincial governments and municipalities in respect of the preparation of civil emergency measures in matters that are not the responsibility of a department of the Federal Government;
- (5) the provision of general liaison with other countries and with NATO on matters relating to civil emergency measures; and
- (6) the responsibility for the direction and administration of the Canadian Emergency Measures College at Arnprior, Ont.

The Civil Emergency Measures Planning Order also defines the civil emergency powers, duties and functions of the Ministers of federal departments and agencies having immediate responsibilities in the event of a war emergency. Included in this category are the Departments of Agriculture, Defence Production, External Affairs, Finance, Fisheries, Justice, Labour, Manpower and Immigration, National Defence, National Health and Welfare, Post Office, Public Works, Solicitor General and Transport and the Bank of Canada, the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation and the Royal Canadian Mounted Police.

Certain emergency functions of government are a projection of normal provincial peacetime responsibility. The following represent responsibilities of this kind, and are the concern of provincial authorities with such federal assistance as may be necessary:—

- (1) preservation of law and order and the prevention of panic by the use of provincial and municipal police and special constables, with whatever support is necessary and feasible from the Royal Canadian Mounted Police and the Armed Services at provincial request;
- (2) control of road traffic, except in areas damaged or covered by heavy fallout, including special measures to assist in the emergency movement of people from areas likely to be attacked or affected by heavy fallout;
- (3) reception services, including arrangements for providing accommodation, emergency feeding and other emergency supplies and welfare services for people who have lost or left their homes or who require assistance because of the breakdown of normal facilities;
- (4) organization and control of medical services, hospitals and public health measures;
- (5) maintenance, clearance and repair of highways;
- (6) organization of municipal and other services for the maintenance and repair of water and sewerage systems; and
- (7) organization of municipal and other fire fighting services, and control over and direction of these services in wartime, except in damaged or heavy fallout areas, where fire fighting services would be under the direction of the Army as part of the re-entry operation.

PART I.—OFFICIAL SOURCES OF INFORMATION

Section 1.—Books About Canada

This basic list of books about Canada, contributed by the National Library, includes a selection of publications grouped alphabetically by author and arranged under the subject classifications of Biography, Country and People, Economics, External Relations, Government and Politics, History, Literature and the Arts, and General Reference Works. The selection represents many aspects of Canadian life, emphasizes the latest editions of books published within the past five years, and includes titles issued in either or both English and French, accompanied by the publisher's address.

It should be noted that, although this list is now an annual feature of the Year Book, it is not a cumulative presentation; it is limited to about 480 titles, necessitating the omission of some items that appeared the preceding year to permit the inclusion of others. For additional titles, the reader should consult the lists of books in earlier Year Books or one or more of the bibliographical collections listed below under the heading "General Reference Works", particularly the monthly or annual editions of *Canadiana* published by the National Library.

Biography

- BARRETTE, Antonio. *Mémoires*. T.1. Montréal, Beauchemin, 1966. 448 p.
- BARRETTE, Antonio. *Memoirs*. Translated by Marc SORMONT. Montreal, Beauchemin, 1966. 384 p.
- BEAL, J. R. *The Pearson phenomenon*. Toronto, Longmans, 1964. 210 p.
- BÉCHARD, Henri. *L'héroïne indienne Kateri Tekakwitha*. Montréal, Fides, 1967. 200 p.
- Biographies canadiennes-françaises*. 20^e éd. Montréal, 1965. 1347 p.
- BISHOP, W. A. *The courage of the early morning, a son's biography of a famous father: the story of Billy Bishop*. Toronto, McClelland and Stewart, 1965. 211 p.
- BOND, C. C. J. *Surveyors of Canada, 1867-1967*. Ottawa, Canadian Institute of Surveying, 1966. 154 p.
- BOUCHARD, T. D. *Mémoires de T. D. Bouchard*. Montréal, Beauchemin, 1960. 3 v.
- BRADDON, Russell. *Roy Thomson of Fleet Street*. London, Collins, 1965. 396 p.
- BROWN, Florence M. *Breaking Barriers; Eric Brown and the National Gallery*. Ottawa, Society for Art Publications, 1964. 113 p.

Section 2.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds—federal and provincial—is centralized. Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources of information with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces and data may be obtained concerning the individual provincial efforts in these fields from the respective provincial government departments. However, certain federal departments are also concerned with specific aspects of these subjects and, as in the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole. The Government of Canada, while not administering the resources within the provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions on forest research, forest fire protection and reforestation offer good examples.

Certain Federal Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Radio-Television Commission; and the National Film Board. The Departments of Agriculture, Fisheries, Forestry, Indian Affairs and Northern Development, and Energy, Mines and Resources, and such agencies as the National Museums of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, although several of the latter have publicity branches.

Thus, inquiries for information of a statistical nature should be forwarded to the Information Division, Dominion Bureau of Statistics, Ottawa. Inquiries to federal sources for information not of a statistical nature should be sent as a general rule to the individual departments and agencies of government which are listed, with their functions, at pp. 127-149 of this publication. Inquiries relating to provincial efforts may be directed to the provincial government department concerned. Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Indian Affairs and Northern Development, Ottawa.

Section 3.—Sale of Official Publications

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The regulations relating to the distribution and sale of government

publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7(e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer issues the *Daily Checklist of Government Publications* which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an *Annual Catalogue* (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

The Queen's Printer is the national sales agent in Canada for publications issued by the United Nations; the United Nations Educational, Scientific and Cultural Organization; the World Health Organization; the Food and Agriculture Organization; the Organization for Economic Co-operation and Development; the International Atomic Energy Agency; the International Civil Aviation Organization; the Council of Europe; the Commonwealth Economic Committee; the Organization of American States (Pan American Union); the General Agreement on Tariffs and Trade; the New Zealand Government; the International Labour Organization; the World Meteorological Organization; and the International Telecommunication Union.

Canadian Government and international organizations publications may be obtained from the Canadian Government bookshops located in Halifax, Ottawa, Toronto, Montreal, Winnipeg and Vancouver (see imprint on the reverse side of the title page), or by mail from the Queen's Printer, Ottawa.

Dominion Bureau of Statistics Publications.—The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications. Reports of the Bureau cover all aspects of the national economy; the *Canada Year Book* and *Official Handbook Canada* constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

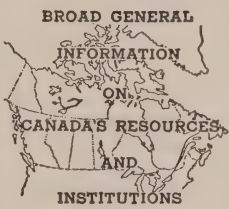

DBS publications are listed with their prices in the DBS section of the Queen's Printer's Catalogues of *Canadian Government Publications*. The *DBS Daily Bulletin* and *Weekly Bulletin*, prepared by the Information Division and available free of charge, are designed to serve persons wishing to keep closely informed on the full range of published information issued by the Bureau. Subscription orders for DBS publications or orders for single copies should be addressed to the Publications Distribution Unit, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada; subscription order forms may be procured from the same source.

Provincial Government Publications.—Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

Newfoundland.....	St. John's	Ontario.....	Toronto
Prince Edward Island.....	Charlottetown	Manitoba.....	Winnipeg
Nova Scotia.....	Halifax	Saskatchewan.....	Regina
New Brunswick.....	Fredericton	Alberta.....	Edmonton
Quebec.....	Quebec	British Columbia.....	Victoria

DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

NOTE.—In the "Federal Data" column, the major source of information on each subject is given first; other sources follow in alphabetical order, with the exception of the National Film Board and the Dominion Bureau of Statistics which appear at the end of each listing with which they are concerned, except where they are the major source.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Information Division, Dominion Bureau of Statistics.

Côté, Deputy Minister of Veterans Affairs: to be an additional member. F. T. Mace, Assistant Deputy Minister of Veterans Affairs: to be the alternate for Mr. Côté in this capacity.

PART IV.—ORDER OF CANADA AWARDS

In 1967, the Centennial of Confederation, there was established a system of honours and awards for Canada. On the recommendation of the Government, Her Majesty Queen Elizabeth the Second approved the issue of Letters Patent establishing a society of honour to be known as "The Order of Canada" for the purpose of according recognition to Canadian citizens and other persons for merit. The Order consists of three awards—the Companion of the Order of Canada, the Medal of Courage and the Medal of Service. The Chancellor and Principal Companion of the Order is the Governor General and nominations for awards are made directly to the Governor General by an Advisory Council composed of the Chief Justice of Canada (Chairman), the Clerk of the Privy Council, the Under Secretary of State, the Chairman of the Canada Council, the President of the Royal Society of Canada and the President of the Association of Universities and Colleges of Canada. Companions of the Order are selected on the basis of "merit, especially service to Canada or to humanity at large" and the maximum number shall never exceed 150. The Medal of Courage is awarded for the performance of "an act of conspicuous courage in circumstances of great danger" and is not, of course, limited to a fixed maximum number. The Medal of Service is awarded for different categories of meritorious service from that for Companions and not more than 50 may be given in any one year.

On July 7, 1967, the Governor General, in his capacity as Chancellor and Principal Companion of the Order of Canada, appointed the following:—

To be Companions of the Order of Canada

Edgar Spinney ARCHIBALD, C.B.E.	Colonel Robert Samuel McLAUGHLIN, E.D., C.D.

Hugh J. HEASLEY, D.S.O., V.D.	

PART V.—FEDERAL LEGISLATION, 1967-68

Legislation passed in the first session of the Twenty-seventh Parliament from Apr. 3, 1967 (after the Easter adjournment) to May 8, 1967 (the date of prorogation) is outlined in the following statement, followed by legislation passed in the second session of the Twenty-seventh Parliament from May 8, 1967 to Apr. 23, 1968 (the date of dissolution). Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the *Statutes of Canada* in the given volume and chapter.

Legislation of the First Session of the Twenty-seventh Parliament, Apr. 3, 1967 to May 8, 1967*

Subject, Chapter and Date of Assent			Synopsis
15-16 ELIZ. II 1967			
94	May	8	<i>The Adult Occupational Training Act</i> extends training services to all persons with adult responsibilities who can benefit from such occupational training. It authorizes: the entering into contracts with provinces and employers to provide for payment of costs they may incur for such training; the payment of tuition and other costs for training courses not operated by a province or an employer; the payment of training allowances to persons undertaking occupational training; the making of agreements with the provinces respecting research in this field; and the payment of loans to provinces to assist in the provision of training facilities. The Act arranges for the transition from present agreements to the new program.
95	May	8	<i>Appropriation Act No. 4, 1967</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1968.
96	May	8	<i>The Canadian Forces Reorganization Act</i> amends the National Defence Act to provide for the amalgamation of the Navy, Army and Air Force into a single service called the Canadian Armed Forces, and amends other Acts in consequence thereof.
97	May	8	<i>An Act to amend the Income Tax Act</i> terminates, effective Mar. 31, 1967, the tax period to which the special 5-p.c. refundable tax on business profits applies and also terminates on the same date the period of collection of the tax from corporations.

* The first session of the Twenty-seventh Parliament opened Jan. 18, 1966; legislation passed from that date to the Easter adjournment in 1967 is outlined in the 1967 Year Book, pp. 1247-1253.

Legislation of the Second Session of the Twenty-seventh Parliament, May 8, 1967 to Apr. 23, 1968

Subject, Chapter and Date of Assent			Synopsis
16-17 ELIZ. II Finance— 1967			
2	July	7	<i>Appropriation Act No. 5, 1967</i> (Main Supply) grants certain sums of money for the public service for the financial year ending Mar. 31, 1968.
3	July	7	<i>Appropriation Act No. 6, 1967</i> (Interim) grants certain sums of money for the public service for the financial year ending Mar. 31, 1968.
8	July	7	<i>Appropriation Act No. 7, 1967</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1968.
19	Dec.	21	<i>An Act to amend the Industrial Development Bank Act</i> includes as a member of the Bank the Deputy Minister of Industry and increases the authorized capital of the Bank from \$50,000,000 to \$75,000,000 and its borrowing authority from five times to ten times the amount of its paid-up capital and Reserve Fund.

**Legislation of the Second Session of the Twenty-seventh Parliament,
May 8, 1967 to Apr. 23, 1968—continued**

Subject, Chapter and Date of Assent	Synopsis
Finance—concluded 1968	
26 Mar. 7	<i>An Act to amend the Currency, Mint and Exchange Fund Act and the Criminal Code</i> mainly revises the former Act with respect to the composition of coins and revises the Criminal Code in consequence thereof; the schedule to the Act describing composition, standards and remedy allowance of gold and subsidiary coins is replaced.
34 Mar. 27	<i>Appropriation Act No. 1, 1968</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1968.
35 Mar. 27	<i>Appropriation Act No. 2, 1968</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1969.
Government— 1967	
6 July 7	<i>The Cape Breton Development Corporation Act</i> establishes a Crown corporation to acquire the interests of the major coal producer in the Sydney coal-field and to reorganize and operate the mines with a view to the rationalization of coal production therefrom and the gradual withdrawal of the Corporation from such production.
9 Nov. 6	<i>An Act to amend the Canada Corporations Act</i> removes discrepancies resulting from amendments made previously and clarifies provisions affected by those amendments.
10 Nov. 6	<i>An Act respecting the Electoral Boundaries Readjustment Act</i> changes the name of the electoral district of Peel-Dufferin to Peel-Dufferin-Simcoe.
11 Nov. 6	<i>An Act respecting the Electoral Boundaries Readjustment Act</i> changes the name of the electoral district of Oshawa to Oshawa-Whitby.
12 Dec. 21	<i>An Act respecting the boundary between the Province of British Columbia and the Yukon and Northwest Territories</i> declares the boundary line surveyed and marked on the ground under the direction of Commissioners appointed therefor to be the boundary line between the Province and the Territories concerned.
16 Dec. 21	<i>The Department of Consumer and Corporate Affairs Act</i> establishes a Department of Consumer and Corporate Affairs, the Minister of which shall perform functions relating to consumer affairs; corporations and corporate securities; combines, mergers, monopolies and restraint of trade; bankruptcy and insolvency; and patents, copyrights and trade marks; and shall continue to be a Registrar General of Canada.
18 Dec. 21	<i>An Act to amend the Government Employees Compensation Act</i> provides for coverage under the Act for persons required to take training before being employed by the Federal Government and persons on leave without pay for the same purpose; it also provides coverage in the case of an employee suffering disability or death attributable to environmental conditions of the place to which he was assigned.
21 Dec. 21	<i>The National Museums Act</i> establishes a corporation for the administration of the National Museums of Canada, comprising a museum of fine arts known as the National Gallery of Canada, a museum of human history, a museum of natural history, a museum of science and technology, and such other museums as may be established.
1968	
32 Mar. 7	<i>An Act to amend the Territorial Lands Act, the Land Titles Act and the Public Lands Grant Act</i> provides for a simplified procedure for the granting of territorial lands and makes changes in the Lands Titles Act and the Public Lands Grants Act consequential upon that procedure.
Defence— 1967	
23 Dec. 21	<i>The Visiting Forces Act</i> combines previous legislation relating to the armed forces of other countries visiting Canada, without affecting the existing agreement concerning visiting forces of NATO countries.
1968	
27 Mar. 7	<i>An Act to amend the Defence Production Act</i> makes a change with respect to contract regulations.

**Legislation of the Second Session of the Twenty-seventh Parliament,
May 8, 1967 to Apr. 23, 1968—continued**

Subject, Chapter and Date of Assent	Synopsis
Justice—	
1967	
7 July 7	<i>The Interpretation Act</i> consolidates the Interpretation Act and amendments thereto and effects certain consequential amendments to the Canada Evidence Act and the Bills of Exchange Act. The purposes of this legislation are to establish uniform definitions and modes of expression, to eliminate repetition in the statutes and to facilitate the drafting and construction of statutes. In the present revision some new provisions have been added and others improved and the language has been revised throughout in accordance with modern drafting standards.
15 Dec. 21	<i>An Act to amend the Criminal Code</i> confines, for an experimental period of five years, the imposition of the death penalty in relation to murder to the murder of police officers and others employed for the maintenance of the public peace, acting in the course of their duties, and to the murder of prison guards and other officers or permanent employees of prisons, acting in the course of their duties.
20 Dec. 21	<i>An Act to amend the Judges Act</i> authorizes the provision of salaries for nine additional judges.
Manpower and Immigration—	
1967	
1 June 8	<i>An Act to amend the Immigration Act</i> increases from \$12,000,000 to \$20,000,000 the ceiling on the amount of assisted passage loans to immigrants that may be outstanding at any one time.
13 Dec. 21	<i>The Canada Manpower and Immigration Council Act</i> authorizes the establishment of a Council of not more than 15 members to be appointed by the Governor in Council to advise the Minister of Manpower and Immigration on all matters pertaining to the effective utilization and development of manpower resources in Canada, including immigrants and their adjustment to Canadian life.
1968	
37 Mar. 27	<i>An Act to amend the Immigration Act</i> gives permanent status under the Act to immigrants who have suffered from a mental disorder but who apparently have been cured, and to persons who have been convicted of and imprisoned for crimes after a period during which they have demonstrated their rehabilitation.
Revenue—	
1968	
28 Mar. 7	<i>An Act to amend the Excise Act</i> implements the Excise Act resolution tabled in the House of Commons on Nov. 30, 1967 with respect to increased federal taxes on spirits, brandy and beer.
29 Mar. 7	<i>An Act to amend the Excise Tax Act</i> implements the Excise Act resolution tabled in the House of Commons on Nov. 30, 1967 with respect to increased federal taxes on cigarettes, cigars, tobacco and wine, certain exemptions from sales tax, etc.
38 Mar. 27	<i>An Act to amend the Income Tax Act</i> , among other things, levies, with respect to taxable income earned in 1968 and 1969, a surtax equal to 3 p.c. of the income tax otherwise payable by a corporation and, for an individual, a surtax equal to 3 p.c. of his basic tax in excess of \$200. The amendment also provides that corporations will be required to pay their corporation income tax over a period that commences two months closer to the beginning of their taxation year than previously, and that the full amount of a gift to a province may be deducted from the income of the donor, with a retroactive provision.
Transportation and Communications—	
1967	
14 Dec. 21	<i>The Canadian National Railways Financing and Guarantee Act, 1967</i> authorizes the provision of money to meet certain capital expenditures of the CNR system for the period Jan. 1, 1967 to June 30, 1968 and authorizes the guarantee of certain securities to be issued by the CNR.

**Legislation of the Second Session of the Twenty-seventh Parliament,
May 8, 1967 to Apr. 23, 1968—concluded**

Subject, Chapter and Date of Assent	Synopsis
Transportation and Communications— concluded	
1967	
22 Dec. 21	<i>The Teleferry Act</i> authorizes federal regulation of aerial cable-cars that connect provinces or Canada and the United States, through licensing and safety provisions.
1968	
25 Mar. 7	<i>The Broadcasting Act</i> implements a broadcasting policy for Canada and authorizes the establishment of the Canadian Radio-Television Commission as a single independent public authority to regulate and supervise the Canadian broadcasting system; the Radio Act is amended in consequence thereof and other related provisions included.
31 Mar. 7	<i>The Northern Ontario Pipe Line Crown Corporation Dissolution Act</i> provides for the dissolution of that Corporation.
Miscellaneous—	
1967	
4 July 7	<i>An Act to amend the Canadian Citizenship Act</i> provides for flexibility in the residence requirement of an applicant, clarifies the oath of allegiance requirement, provides for resumption of citizenship after residence abroad, establishes a Citizenship Appeal Court to hear appeals from final decisions of Citizenship Courts refusing applications for citizenship, and defines Canadian citizenship rights of persons born in Newfoundland or outside of Newfoundland of Newfoundland parents. Amendments are also made with respect to offences under the Act and penalties therefor.
5 July 7	<i>An Act to amend the Canadian Wheat Board Act</i> makes permanent the powers of the Board which previously were to terminate on Aug. 1, 1967, and lists the mills and feed warehouses in existence on Mar. 1, 1967.
17 Dec. 21	<i>An Act to amend the Emergency Gold Mining Assistance Act</i> extends the application of the Act to 1968, 1969 and 1970 without change in the method of computing the amount of assistance payable.
1968	
24 Feb. 1	<i>The Divorce Act</i> codifies and extends the laws of divorce. It retains the traditional marital offences as grounds for divorce and includes as well a modified concept of marriage breakdown as a new ground for divorce; contains provisions placing the married woman in a position equivalent to that of her husband for the purpose of obtaining a valid decree of divorce both in Canada and abroad; includes alimony and child maintenance and custody provisions; abolishes parliamentary divorce, vesting divorce jurisdiction in respect of Quebec and Newfoundland in a new divorce division of the Exchequer Court of Canada; and it includes detailed appeal provisions and many consequential and other matters in relation to divorce.
30 Mar. 7	<i>An Act to amend the Fish Inspection Act</i> extends the definition of "container" to include wrappers and confining bands and prohibits the import and export of fish that is tainted, decomposed or unwholesome.
33 Mar. 7	<i>An Act to amend the Unemployment Insurance Act</i> broadens the coverage of the Act to include salaried workers earning up to \$7,800 a year and establishes new schedules of contributions to be paid by employers on behalf of employees, of benefits and of allowable earnings for persons in receipt of benefits.
36 Mar. 27	<i>An Act to amend the Canada Deposit Insurance Corporation Act</i> makes provision for the situation that arises with respect to the deposits of a depositor when member institutions merge, makes amendments concerning the assessing and collecting of premiums under the Act and adds a new section covering provincial insuring arrangements.
39 Mar. 27	<i>An Act to amend the National Housing Act, 1954</i> increases from \$13,000 to \$18,000 the loan ratios for insured loans to home owners, builders, and co-operative housing associations for the construction of new housing units.

PART VI.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; and annually from that year in successive editions. A reprint entitled *Canadian Chronology, 1497-1960* is also available from the Dominion Bureau of Statistics. The following listing covers the year 1967 and Jan. 1-Apr. 5, 1968 and it should be mentioned that certain of the dates given therein are approximate. References regarding changes in federal and provincial legislatures or ministries are not included but may be found in Chapter II on Constitution and Government or in Appendix I.

1967

January: *Jan. 1*, Mme Georges P. Vanier, wife of the Governor General, dedicated Canada's Centennial Train at Ottawa prior to its departure for Victoria where it began, on Jan. 9, an 83-stop tour of Canada. *Jan. 4*, Dr. Helen Hogg, University of Toronto, awarded the Rittenhouse Silver Medal by the Rittenhouse Astronomical Society for her study of variable stars; she was the first Canadian and the second woman to receive the honour. *Jan. 5*, Death of David Roger Mitchell, M.P. for Sudbury. Federal proclamation that Jan. 11, 1967, the birthday of Sir John A. Macdonald, be commemorated across Canada in observance of his place in history as one of the Fathers of Confederation and the first Prime Minister of Canada. *Jan. 9*, Hon. Walter L. Gordon reappointed to the Federal Cabinet. Death in Winnipeg of Manitoba's Lieutenant-Governor, Hon. Errick F. Willis. *Jan. 11*, Canada's tallest and newest hotel, the 38-storey Château Champlain in Montreal, officially opened. *Jan. 13*, Nancy Greene, Rossland, B.C., won the Swiss international ski championship. *Jan. 14*, Large-scale strike by Roman Catholic elementary and secondary school teachers closed hundreds of schools in Montreal and Trois-Rivières; Mr. Justice André Montpetit of Quebec Superior Court appointed by the Quebec Government Jan. 17 as mediator. Death of Hon. J. L. Ilsley, former Minister of National Revenue, Minister of Finance and Minister of Justice. *Jan. 18*, Yellowknife, N.W.T., officially named capital of the Northwest Territories. *Jan. 23*, Special ministerial committee created to study the implications of foreign ownership and control of Canadian industry, headed by Hon. Walter L. Gordon. *Jan. 24*, The British Columbia Legislature opened its 28th Legislature at New Westminster in commemoration of the opening of the first session of the Legislative Council of the United Colony of British Columbia which merged the colonies of Vancouver Island and British Columbia in New Westminster one hundred years ago. *Jan. 27*, Col. Virgil Grissom, Lt.-Col. Edward White and Lt.-Cmdr. Roger Chaffee, crew of the U.S. *Apollo* spacecraft project, died in a fire on the launching pad at Cape Kennedy. The Outer Space Treaty on the peaceful exploration and use of outer space, including the moon and other celestial bodies, approved by the UN General Assembly Dec. 19, 1966, signed by Canada in London, Moscow and Washington. *Jan. 29*, Valerie Jones, Toronto, and Donald Knight, Dundas, Ont., won the Canadian senior singles figure-skating championships in Toronto. Explosions occurred at Yugoslav embassies and consulates in six North American cities, including Ottawa and Toronto; buildings were damaged but there were no injuries. *Jan. 30*, Bank of Canada interest rate reduced to 5 p.c. from 5½ p.c. City of Montreal clerical workers went on strike, closing down municipal works, the social welfare department and the City Hall.

February: Under Stage Two of the Federal Government program for bilingualism, 20 top civil servants moved to Quebec for a year of intensive schooling in French. The Netherlands announced decision to buy 105 CF-5 ground-attack aircraft worth about \$100,000,000, to be built mainly in Canada. Contract signed covering the sale of 1,500,000,000 Mcf. of natural gas from reserves in the Northwest Territories, the Yukon Territory and northeastern British Columbia, the most remote areas yet to be exploited. 135 hospital workers in Grand Falls, Nfld., voted to return to work after a week on strike rather than defy legislation under which they could be fired and their union decertified. *Feb. 3*, Prime Minister Pearson announced the appointment of Anne Francis (Mrs. John Bird), free-lance journalist of Ottawa, as Chairman of the Royal Commission on the Status of Women. *Feb. 6*, A bronze bust of Hon. Ellen Fairclough, Canada's first woman cabinet minister, presented by the Zonta Club of Hamilton to the House of Commons. *Feb. 10*, Royal Assent given to an Act to require all Ontario-incorporated loan and trust companies to insure their deposits with a Crown corporation. *Feb. 11-18*, First Canadian Winter Games held at Quebec City, assisted by \$700,000 in federal funds. *Feb. 13-22*, Controversy *re* terms under which the U.S.-owned Mercantile Bank of Canada may operate in Canada; resolved by allowing the City Bank of New York an extra five years to sell Canadians 75 p.c. of its shares in the Mercantile Bank. *Feb. 15*, Report of the Senate-Commons committee on investigation of consumer credit tabled in the House of Commons; full disclosure of interest and credit charges recommended. *Feb. 17*, The Quebec Government's controversial Bill 25 ended a five-month teacher strike by ordering their return to classrooms within 48 hours and suspending their right to strike until June 30, 1968. Sinclair Stevens, Chairman of the Bank of Western Canada, resigned and the Bank directors given 30 days in which to acquire more Western Canadian capital. Royal Assent given to an Act establishing the Canada Deposit Insurance Corporation and requiring all federally incorporated trust and loan companies to insure their deposits with the Corporation. *Feb. 23*, Resignation of Senator Keith Davey as Commissioner of the Canadian Football League announced. *Feb. 24*, Report of the Royal Commission on Taxation headed by Kenneth Carter, Toronto, tabled in the House of Commons. The National Press Club of Canada presented its 1967 Award for Excellence to Gillis Purcell, General Manager of Canadian Press. *Feb. 27-May 29*, Six of Britain's eight remaining colonies in the Caribbean assumed responsibility for their own internal affairs with Britain remaining responsible for defence and certain external relations—Antigua and St. Kitts, Feb. 27; Dominica and St. Lucia, Mar. 1; Grenada, Mar. 3; and St. Vincent, May 29.

March: *Mar. 2*, Society of Honour to be known as the Order of Canada established by Order in Council. Canadian women's curling championship won by Winnipeg rink skipped by Betty Duguid. Leaflets tossed from the Public Gallery in the House of Commons by John Campbell of Montreal to draw attention to the case of Calvin MacDonald who claimed unfair treatment by the RCMP. *Mar. 3*, O. J. Gaffney Construction Company of Stratford, Ont., found responsible for the Heron Road bridge collapse in Ottawa on Aug. 10, 1966, and fined the maximum penalty of \$5,000. Investigations begun into the affairs of the Oshawa Acceptance Corp., Oshawa, Ont., after complaints of investors that they had not received interest on their deposits. *Mar. 4*, Montreal's 4,500 civic clerical workers accepted a new two-year contract and ended a 34-day strike. *Mar. 6*, Death of His Excellency General The Right Honourable Georges P. Vanier, D.S.O., M.C., C.D., Governor General of Canada, in Ottawa, at age 78; seven-day mourning period proclaimed; burial took place at The Citadel, Quebec City, on May 4. *Mar. 9*, Appointment of G. Hamilton Southam as first Director of the National Arts Centre at Ottawa, to be completed in 1969. *Mar. 10*, The Brier Cup won by curling team skipped by Alfie Phillips, Jr., of Toronto, the first time in 16 years it has been won by an Eastern Canadian rink. Mrs. Viola MacMillan convicted on charges of wash trading in shares of Consolidated Golden Arrow Mines Ltd., in 1964; sentenced Mar. 17 to nine months in reformatory and fined \$10,000. *Mar. 11*, Death in Toronto, Ont., of Senator W. Rupert Davies. *Mar. 12*, Death in Saint John, N.B., of Senator A. Neil McLean. *Mar. 13*, The Public Service Staff Relations Act, providing bargaining rights to over 200,000 employees, the new Public Service Employment Act and the revised Financial Administration Act, establishing the Treasury Board as the central management agency for the Public Service, came into force. *Mar. 16*, The Quebec Government increased provincial sales tax from 6 p.c. to 8 p.c., the highest in Canada, and became the first province to introduce a family allowance program to supplement the federal allowance. *Mar. 17*, Award of the 1966 Stephen Leacock Memorial medal to Richard J. Needham, columnist of the *Toronto Globe and Mail*, for his book *Needham's Inferno*. Toronto-based financial empire of Sinclair Stevens, including control of the Bank of Western Canada, passed to M. M. Bienvendu of Montreal, who purchased controlling interest in British International Finance (Canada) Ltd. A special Commons-Senate committee, for the first time in Canadian history, recommended that both Houses of Parliament pass an Address to the Governor General for the removal of Mr. Justice Léo A. Landreville from the Ontario Supreme Court. Resignation of Robert Thompson, M.P., as leader of the National Social Credit Party. *Mar. 21*, The Canadian Brotherhood of Transport and General Workers (CLC) concluded negotiations which resulted in the acceptance of a 24-p.c. increase over three years for 22,000 workers on the CNR, bringing the total number of workers who have accepted the Goldenberg settlement formula (December 1966) to 98,000. *Mar. 22*, Report of the Ontario Securities Commission and auditors regarding collapse of the Prudential Finance Corp. tabled in the Ontario legislature found strong suspicion of false and misleading audit statements. *Mar. 24*, The International Ice Hockey Federation awarded Canada the 1970 World Hockey Tournament. *Mar. 27*, Russia won the world hockey championship, defeating Canada 2 to 1. *Mar. 28*, Nancy Greene, Rossland, B.C., won the first World Cup for women skiers at Jackson Hole, Wyoming. *Mar. 27-30*, Conference of the Canadian Institute of Mining and Metallurgy held in Ottawa, attended by 3,000 delegates. *Mar. 29*, Roland Michener appointed Governor General of Canada; sworn in Apr. 17. The first debentures

in Canadian banking history offered by the Toronto-Dominion Bank under authorization of the new Bank Act.

April: *Apr. 1*, Bush pilot Robert Gauchie, downed within 60 miles of the Arctic Circle, found alive after 58 days. *Apr. 3*, Fifteen men killed and nine injured in an underground coal mine explosion near Natal, B.C. Resignation of Hon. Guy Favreau as President of the Privy Council and Registrar General and Member of Parliament; appointed to the Quebec Superior Court. Debate of unification of Armed Forces begun by Minister of Defence Hellyer; Act passed by House of Commons Apr. 25 combining the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force into a unified service "The Canadian Armed Forces". *Apr. 4*, Resignation of Hon. Lucien Cardin as Minister of Justice and Member of Parliament. *Apr. 6*, Commissioner George B. McClellan of the Royal Canadian Mounted Police named ombudsman in Alberta, the first position of its kind in Canada. *Apr. 6-9*, Representatives of veterans' organizations kindled torches from the Centennial Flame on Parliament Hill and transferred flame in miners' lamps to the Canadian war memorial in France to commemorate the 50th anniversary of the battle of Vimy Ridge Apr. 9; H.R.H. the Duke of Edinburgh, representing H.M. Queen Elizabeth II, was guest of honour. Ceremonies also took place in Ottawa. *Apr. 7*, The Bank of Canada reduced its lending rate to 4½ p.c. from 5 p.c. *Apr. 11*, Bower Edward Featherstone, federal civil servant, convicted under the Official Secrets Act of obtaining a confidential navy chart; sentenced Apr. 24 to 2½ years in penitentiary. *Apr. 12*, The House of Commons unanimously approved Commons-Senate committee report recommending adoption of the present music for *O Canada* as the National Anthem and the traditional music for *God Save the Queen* as the Royal Anthem in Canada. *Apr. 17*, Prime Minister Pearson announced the creation of the major honour, the Order of Canada, to be awarded on merit, especially for service to Canada or to humanity at large. The Order will have three classes: Companion of the Order, bearing the letters C.C. after the name and limited to 150; Medal of Courage, bearing the letters C.M. and unlimited in number; and Medal of Service, bearing the letters S.M. and limited to 50 a year. *Apr. 18*, Manitoba approved the imposition of a 5-p.c. sales tax, effective June 1. The Union of Quebec Specialized Education Teachers was convicted of contempt of court when its 2,300 members ignored a 1966 court injunction forbidding strike action and left 30,000 students without classroom instruction from Apr. 12-30; the union was fined \$2,000 and each executive member was sentenced to 20 days in prison. *Apr. 19*, U.S. spacecraft *Surveyor III* made soft landing on moon to scout astronaut landing site, using shovel and camera to return detailed information of the moon's surface. *Apr. 19-20*, First meeting of the Canada-United Kingdom Joint Ministerial Committee on Trade and Economic Affairs held in London, Eng. *Apr. 23-24*, The U.S.S.R. spacecraft *Soyuz I* launched, and after orbit plunged to earth killing pilot Vladimir M. Ottawa and Eastview and the adjoining township of Cumberland, with a single mayor. *Feb. 3*, Death in Saskatoon of Violet McNaughton, first women's editor of *The Western Producer* and first President of the Women's Division of the Saskatchewan Grain Growers' Association. *Feb. 4*, The Massey Medal of the Royal Canadian Geographical Society presented to Col. Cyril H. Smith of Ottawa for his contribution to Canadian cartography. *Feb. 5*, Evidence of Norse settlement in Newfoundland about 1000 A.D. revealed by archaeologists. *Feb. 5-8*, Federal-provincial constitutional conference held in Ottawa; closed with official recognition of French language rights across Canada, creation of inter-government agencies to continue constitutional conferences and to study language rights, human rights, distribution of federal and provincial powers, reform of federal institutions, regional economic disparities, procedure for amending the constitution and co-ordination of all federal-provincial relations. *Feb. 13*, Death in Toronto of Portia White, acclaimed Canadian contralto. *Feb. 15*, Gold medal in giant slalom won by Nancy Greene of Rossland, B.C., in Olympic Games at Grenoble, France. The Gordie Task Force report on foreign investment tabled in the House of Commons; recommendations include a new national policy to protect Canadian sovereignty and independence, jeopardized by controls of foreign governments over Canadian subsidiaries. *Feb. 16*, Death in Toronto of Dr. Healey Willan, renowned Canadian composer of religious and classical music. *Feb. 19*, A boom in uranium prospecting in the Elliot Lake area of Ontario began; more than 1,000 stakers participated in the 100,000-acre area. *Feb. 19-23*, Crisis touched off in the House of Commons when the combined opposition rejected the Government's income tax Bill 84 to 82 and blocked Parliamentary business for three days. *Feb. 22*, Creation of a Quebec-owned television-radio network to be known as Radio-Québec announced by Premier Johnson, its purpose to be the promotion of education and culture. *Feb. 26*, Finance Minister Sharp announced the "repatriation" of \$426,000,000 in U.S. funds from money and gold on deposit at the International Monetary Fund to bolster the Canadian dollar. *Feb. 27*, A Centennial carpet bearing floral emblems of the provinces and the territories, donated by widows of former Canadian Governors General—Countess of Bessborough, Lady Tweedsmuir and Princess Alice, Countess of Athlone—and Earl Alexander, presented to Mrs. Lester B. Pearson at the National Gallery. Resignation of Gordon Churchill, M.P., from the Progressive Conservative caucus in protest against the caucus decision to capitulate in the debate on a motion of confidence in the Government. The 5-p.c. income tax surcharge, imposed since Jan. 1 in anticipation of the passage of the income tax Bill in the House of Commons, withdrawn by the Federal Government. *Feb. 28*, The House of Commons voted 138-119 to approve the Government's confidence motion and to maintain the Liberal Government in office.

March: Bertrand Lord Russell's collection of letters and papers purchased by McMaster University, Hamilton, Ont. *Mar. 4*, Prime Minister Pearson announced the suspension of diplomatic relations with Gabon following Gabon's invitation to Quebec to an international education conference, and later stated that Canada would break off relations with France if it followed the Gabonese example. *Mar. 5*, Report of the McRuer Royal Commission on Civil Rights tabled in the Ontario Legislature

recommended greater protection of the individual and control of the power of governments and police. *Mar. 7*, Finance Minister Sharp announced steps to strengthen the Canadian dollar; Canada exempted from restrictions by the U.S. on the flow of capital. External Affairs Minister Martin announced Canada's participation with the U.S. in the development of an airborne radar system to replace all or part of the Distant Early Warning radar stations in Northern Canada. *Mar. 11*, New version of the tax Bill defeated Feb. 19 introduced in the House of Commons; passed after amendment on Mar. 15. Hon. Walter L. Gordon, M.P., resigned as President of the Privy Council. *Mar. 16*, Report of federal inquiry into the administration of justice in the Hay River area of the Northwest Territories tabled in the House of Commons. Ralph B. Cowan, M.P. for York-Humber, removed from Liberal caucus for opposition to Government policy. Bank of Canada rate increased to 7½ p.c. from 7 p.c. *Mar. 16-17*, Finance Minister Sharp announced suspension of gold trading by Canadian banks and other dealers; restrictions removed Apr. 3. Bankers of the seven countries making up the London Gold Pool decided to continue to exchange gold at \$35 per oz. in settlement of international payments and leave it to find its own level on the private market; trading in the London gold market was closed until Apr. 1. *Mar. 21*, Disturbance on the Israel-Jordan border, the largest such incident since the Arab-Israeli war of June 1967; the UN Security Council met in emergency session. *Mar. 23*, International curling championship held at Montreal won by Canadian team skipped by Ron Northcott of Calgary. *Mar. 24*, The Eleanor Roosevelt Humanities Award presented to Mrs. Samuel Bronfman of Montreal, the first Canadian woman to be so honoured. *Mar. 26*, Nancy Greene of Rossland, B.C., announced her decision to retire from international competitive skiing. *Mar. 27*, Death in a plane crash near Moscow of Col. Yuri Gagarin, first man in space. *Mar. 30*, The Governments of Canada and the United States agreed to renew the NORAD agreement for five years when it expires on May 12, 1968, subject to review at any time during this period. *Mar. 31*, U.S. President Johnson announced a pause in air and sea action against North Viet-Nam as a first step toward ending the war; and also that he would neither seek nor accept nomination as a candidate for another term as President.

April: *Apr. 2*, Mayor Drapeau of Montreal announced the creation of a lottery-like scheme of raising money for city financial purposes, the first such scheme to be initiated in Canada. *Apr. 3*, The Fred W. Tanner Lecture Award of the Chicago branch of the U.S. Institute of Food Technology awarded to Dr. Frederick S. Thatcher, Food and Drug Directorate, Department of National Health and Welfare, Ottawa, the first Canadian to be so honoured. *Apr. 4*, Death in Memphis, Tennessee, of Negro civil rights leader and Nobel Peace Prize winner Dr. Martin Luther King, Jr., from an assassin's bullet; riots erupted in many cities throughout the U.S. as a result. *Apr. 4-6*, National Liberal convention held in Ottawa; Hon. Pierre Elliott Trudeau elected leader, succeeding Rt. Hon. Lester B. Pearson; assumed office as Prime Minister Apr. 20. *Apr. 5*, The Cunard liner *Queen Elizabeth* sold to U.S. interests, to be moored in the Delaware River and used as a conference centre and airport hotel. Nancy Greene of Rossland, B.C., successfully defended her World Cup championship in women's international skiing for the second straight year.

APPENDIX I

CONSTITUTION AND GOVERNMENT

Certain information given in Chapter II on Constitution and Government (closed off Sept. 30, 1967, except for a few items) is up-dated in this Appendix. Appointments to the Queen's Privy Council for Canada, the Cabinet and the Senate, as well as the appointment of the Lieutenant-Governor of New Brunswick, from Sept. 30, 1967 to early April 1968, are included in the Register of Official Appointments at pp. 1228-1229.

Page 75, Table 4

At the National Liberal Convention held Apr. 4-6, 1968, the Hon. Pierre Elliott Trudeau was elected leader of the Liberal Party and assumed office as Prime Minister of Canada on Apr. 20. Members of the Cabinet named Apr. 22, 1968 were:—

Prime Minister, Minister of Justice and Attorney General of Canada.....	Rt. Hon. Pierre Elliott TRUDEAU
Minister without Portfolio.....	Hon. Paul MARTIN
Minister of Transport.....	Hon. Paul T. HELLYER

Minister of Agriculture.....	Hon. John J. GREENE
Postmaster General.....	Hon. Jean-Pierre CÔTÉ
Minister of Consumer and Corporate Affairs and Solicitor General.....	Hon. John N. TURNER
Minister of National Revenue.....	Hon. Jean CHRÉTIEN
Minister without Portfolio.....	Hon. Charles GRANGER
Minister without Portfolio.....	Hon. Bryce S. MACKASEY
Minister without Portfolio.....	Hon. Donald S. MACDONALD
Minister without Portfolio.....	Hon. John C. MUNRO
Minister without Portfolio.....	Hon. Gérard PELLETIER
Minister without Portfolio.....	Hon. Jack DAVIS (appointed Apr. 26, 1968)

Page 78, Table 6

The 27th Parliament was dissolved on Apr. 23, 1968.

Pages 83-88, Tables 10 and 11

By-elections held between Sept. 30, 1967 and Mar. 31, 1968 were as follows:—

<i>Electoral District</i>	<i>Date of By-election</i>	<i>New Member</i>
Bonavista-Twillingate, Nfld.....	Nov. 6, 1967	Charles Ronald GRANGER
Colchester-Hants, N.S.....	Nov. 6, 1967	Robert L. STANFIELD
Jasper-Edson, Alta.....	Nov. 6, 1967	Douglas M. CASTON

The seats for Matapédia-Matane, Que., Saint-Jacques, Que., Sherbrooke, Que., and Grey-Bruce, Ont., were vacant as at Mar. 31, 1968.

Pages 97-109

Certain provincial Ministries are listed here as at Mar. 31, 1968, because of changes made between June 30, 1967 and that date—those for Nova Scotia and Manitoba following the resignation of the respective Premiers and those for New Brunswick, Ontario and Saskatchewan following General Elections.

Seventeenth Ministry of Nova Scotia, as at Mar. 31, 1968

(Party standing at latest General Election, May 30, 1967:
40 Progressive Conservative and 6 Liberal)

<u>Office</u>	<u>Name</u>
Premier, Minister of Finance and Economics, and Chairman of the Nova Scotia Power Commission.....	Hon. G. I. SMITH
Attorney General and Minister of Public Health.....	Hon. R. A. DONAHOE
Minister of Public Works and Minister of Highways.....	Hon. S. T. PYKE
Minister of Lands and Forests and Minister of Fisheries.....	Hon. E. D. HALBURTON
Minister of Labour.....	Hon. T. J. MCKEUGH
Minister of Trade and Industry.....	Hon. W. S. KENNEDY JONES
Minister of Mines and Minister in Charge of the Liquor Control Act.....	Hon. D. M. SMITH
Minister without Portfolio.....	Hon. D. R. MACLEOD
Minister of Public Welfare and Provincial Secretary.....	Hon. J. M. HARDING
Minister of Municipal Affairs.....	Hon. D. C. MACNEIL
Minister of Agriculture and Marketing and Minister under the Water Act.....	Hon. I. W. AKERLEY
Minister of Education.....	Hon. G. J. DOUCET

Twenty-third Ministry of New Brunswick, as at Mar. 31, 1968

(Party standing at latest General Election, Oct. 23, 1967:
32 Liberal, 25 Progressive Conservative and one vacant)

<u>Office</u>	<u>Name</u>
Premier.....	Hon. Louis J. ROBICHAUD
Minister of Justice.....	Hon. Bernard A. JEAN
Minister of Finance.....	Hon. L. G. DESBRISAY
Provincial Secretary.....	Hon. Joseph E. LEBLANC
Minister of Public Works.....	Hon. Raymond D. DOUCETT
Minister of Highways.....	Hon. André F. RICHARD
Minister of Agriculture and Rural Development.....	Hon. J. Adrien LÉVESQUE
Minister of Natural Resources.....	Hon. William R. DUFFIE
Minister of Health and Welfare.....	Hon. L. Norbert THÉRIAULT
Minister of Labour.....	Hon. H. H. WILLIAMSON
Minister of Education.....	Hon. W. W. MELDRUM
Minister of Municipal Affairs.....	Hon. B. Fernand NADEAU
Minister of Economic Growth.....	Hon. Robert J. HIGGINS
Minister of Fisheries.....	Hon. J. Ernest RICHARD
Minister of Youth.....	Hon. Joffre DAIGLE
Chairman, New Brunswick Electric Power Commission.....	Hon. H. Graham CROCKER

Seventeenth Ministry of Ontario, as at Mar. 31, 1968

(Party standing at latest General Election, Oct. 17, 1967:
69 Progressive Conservative, 28 Liberal and 20 New Democratic Party)

<u>Office</u>	<u>Name</u>
Premier and President of the Council.....	Hon. John Parmenter ROBERTS
Minister of Public Works.....	Hon. Thomas Ray CONNELL
Minister of Health.....	Hon. Matthew Bulloch DYMOND
Minister of Social and Family Services.....	Hon. John YAREMKO
Minister of Financial and Commercial Affairs.....	Hon. Henry Leslie ROWNTREE
Minister of Reform Institutions.....	Hon. Allan GROSSMAN
Minister of Agriculture and Food.....	Hon. William Acheson STEWART
Treasurer.....	Hon. Charles Steel MACNAUGHTON
Minister of Transport.....	Hon. Irwin HASKETT
Minister of Tourism and Information.....	Hon. James Alexander Charles AULD
Minister of Education, and Minister of University Affairs.....	Hon. William Grenville DAVIS
Minister of Energy and Resources Management.....	Hon. John Richard SIMONETT
Minister of Economics and Development.....	Hon. Stanley John RANDALL
Minister of Justice and Attorney General.....	Hon. Arthur Allison WISHART
Minister of Highways.....	Hon. George Ellis GOMME
Minister of Lands and Forests.....	Hon. René BRUNELLE

Seventeenth Ministry of Ontario, as at Mar. 31, 1968—concluded

<u>Office</u>	<u>Name</u>
Minister of Labour.....	Hon. Dalton Arthur BALES
Provincial Secretary and Minister of Citizenship.....	Hon. Robert Stanley WELCH
Minister without Portfolio.....	Hon. Thomas Leonard WELLS
Minister of Municipal Affairs.....	Hon. William Darcy McKEOUGH
Minister without Portfolio.....	Hon. Fernand GUINDON
Minister of Mines.....	Hon. Allan Frederick LAWRENCE

Fifteenth Ministry of Manitoba, as at Mar. 31, 1968

(Party standing at latest General Election, June 23, 1966:

31 Progressive Conservative, 14 Liberal, 11 New Democratic Party and 1 Social Credit)

<u>Office</u>	<u>Name</u>
Premier, President of the Council, Minister of Dominion-Provincial Relations, and Minister charged with the administration of the Manitoba Development Authority Act.....	Hon. Walter WEIR
Provincial Treasurer, and Minister charged with the administration of The Insurance Act.....	Hon. Edward Gurney Vaux EVANS

Minister of Labour and Minister of Co-operation and Co-operative Development.....	Hon. L. P. CODERRE
Minister of Public Works.....	Hon. Allan GUY
Provincial Treasurer.....	Hon. D. G. STEUART
Minister of Natural Resources.....	Hon. J. R. BARRIE

Pages 127-149

There were several revisions to the list of Departments, Boards and Commissions between Sept. 30, 1967 and Mar. 31, 1968, all of which have been incorporated in the Government Organization Chart facing p. 128. The major changes include the re-naming of the Department of the Registrar General to the Department of Consumer and Corporate Affairs, the establishment of the Canadian Radio-Television Commission replacing the Board of Broadcast Governors and the Canadian Broadcasting Corporation, and the integration of the National Museums of Canada (the Museum of Natural History, the Museum of Human History, the Museum of Science and Technology and the National Gallery of Canada) under a newly formed Board of Trustees.

APPENDIX II

POPULATION

Page 211

This Appendix contains limited statistics on households and families recorded at the 1966 Census; more detailed information on this subject may be obtained from 1966 Census reports. A household, as defined in the census, consists of a person or a group of persons occupying one dwelling and a dwelling is defined as a structurally separate set of living quarters with a private entrance either from outside or from a common hall, lobby, vestibule or stairway inside. Every person is a member of some household and the number of households equals the number of occupied dwellings.

The following tables show the number of households and persons per household, the number of families and persons per family and the number of children living at home in different age groups, all classified by province.

Households and Persons per Household, by Province, Census Years 1956, 1961 and 1966

Province or Territory	Households			Average Persons per Household		
	1956	1961	1966	1956	1961	1966
	No.	No.	No.	No.	No.	No.
